# SYLVANIA CERAMIC BLUE TOP

PROJECTION LAMPS... for all makes... all types... in all sizes

Use a Sylvania Ceramic Blue Top  
in your projector... your slides  
and movies deserve the best!

New Sylvania Ceramic Blue Tops are avail-  
able in all standard sizes for any projector  
... to fill your exact requirements for  
clear, brilliant projection.

**Blue Tops offer these superior qualities:**

**Brighter**... Ceramic Blue Tops won't scratch,  
chip or peel like ordinary painted tops...  
machine-made filaments assure pictures bright  
as life.

**Cooler**... Ceramic Blue Top is bonded to the  
glass for improved heat dissipation... cooler  
operation assures longer lamp life.

**Longer Lasting**... Exclusive Sylvania shock-  
absorber construction protects filaments from  
vibration damage.

**VICTOR GUARDOMATIC SAFETY FILM TRIPS**  
go into action

With Victor's exclusive Guardomatic Safety Film Trips always on the job, your films are completely safe. Valuable films are safeguarded so your film budget can go toward building a finer film library, rather than buying replacement film. This Victor feature increases projector usage because it builds teacher and student operator confidence.

Check ALL these advantages of Victor 16mm Projectors:

1. Easy 1-2-3 threading and operation
2. Hi-Lite optical system for maximum screen brilliance
3. Sapphire-tipped shuttle for longer service
4. Lubrimatic Oil System with one-spot filling
5. Still picture, reverse, power rewind, and many others

# New and better teaching tool from Bell & Howell

## Famous "Specialist" multi-purpose projector now 750W

Today's brighter classrooms and larger lecture halls call for equipment to match. Bell & Howell's brilliant new "750 Specialist" meets this need . . . and exceeds it! Every feature is made for modern teaching.

- Throws more light than any other 750-watt multi-purpose projector . . . a full 950 lumens.
- Has rugged die-cast aluminum housing. Unit weighs only 9¼ lbs. without case.
- Filmstrip moves on ceramic tracks . . . nothing touches picture area.
- Metal instruction plate permanently mounted on projector is always handy, never gets lost.
- Projects single and double frame filmstrips or 2x2 slides . . . easily converts for automatic slide projection.
- Big 5" fan assures efficient, full-time cooling.
- New design "smooth-focus" lens gives razor-sharp pictures.
- Costs only \$129.50 with "air-flow" case and slide changer. 500-watt "Specialist" multi-purpose projector, \$89.50.

Available through Bell & Howell Audio-Visual Dealers

Free booklet! Write Bell & Howell, 7117 McCormick Rd., Chicago 45, Ill.

Automatic electric slide changer also available. Permits push-button operation from teacher's desk . . . automatically reflexes slides in correct sequence ready for next showing. Ask for a demonstration.

# Bell & Howell

FINER PRODUCTS THROUGH IMAGINATION

# WHICH full closure blind is best for your Audio-Visual Room?

1

2

Where optimum darkness is required your Audio-Visual room should be equipped with the Levolor A.V. Blind identified here as No. 1. This venetian blind has light shields and fascia (or light seal). Where normal darkness will suffice for projection purposes, the Levolor A.V. Blind identified as No. 2 is recommended. Closure is the same as No. 1 but a light seal is used at the head and there are no light shields.

Should you purchase blind No. 2 you can at any time add the light shields.

\* \* \*

Full details and specifications will be sent on request. Write to Audio-Visual Department, LEVOLOR LORENTZEN, INC., 720 Monroe Street, Hoboken, New Jersey.

Be sure to specify

# Breaks through LEARNING barriers

## ...speeds understanding

You'll be amazed at how much faster... how much more thoroughly... your students can absorb new information when you enlarge your teaching scope with this Bausch & Lomb Balopticon® Projector. So versatile that your imagination sets its only limits! With this one instrument you can project big, brilliant, sharply detailed images of:

- **SLIDES**—student-made or commercial.
- **OPAQUE OBJECTS**—drawings, photographs, pages of books or magazines, science specimens, maps, students' schoolwork, etc.
- **FILM**—commercial film strips or individual frames (Film projection attachment optional).

Help your students learn better by helping them see and understand better with a Bausch & Lomb Balopticon Projector.

# "The Strange Case of the COSMIC RAYS"

"The Strange Case of the Cosmic Rays" is the third program in the Bell Telephone System's new TV Science Series. The two earlier programs—"Our Mr. Sun" and "Hemo the Magnificent"—were widely acclaimed by educators, scientists and the general public.

Scientific accuracy is assured by a Scientific Advisory Board and distinguished ad-

visors, including Dr. Carl D. Anderson, Dr. Bruno Rossi and Dr. Marcel Schein. The program was produced and directed by Academy-Award-winner Frank Capra.

Everyone connected with education and science—students and teachers alike—will want to see "The Strange Case of the Cosmic Rays." Remind your students and colleagues to see it on Friday, October 25.

In color and black and white on the **NBC-TV** network, Friday, **October 25, 9-10 P.M., E.D.T.** Please check your local listing for time and station.

## On the SCREEN

### COVER: "The Strange Case of the Cosmic Rays"

This month's cover picture is a scene lifted from the Bell Telephone System Science Series film "The Strange Case of the Cosmic Rays." In it, Dr. Frank Baxter (left) and Richard Carlson, play "Dr. Research" and "Fiction Writer" respectively. This film is the newest of the Bell Telephone System Science Series and will be premiered on television Friday night, October 25. In this scene, Baxter and Carlson are shown using a model of the earth and its magnetic field to show how cosmic rays are deflected as they hurtle in from outer space. See page \_\_\_ for more complete details regarding this film.

### What Next?

We who live in this Atomic Age find it difficult to conceive of the potentials this may yet lead to. Any more than was Ben Franklin able to envision the huge 4-color presses that were later to evolve from his original invention, or that any other medium could replace or supplement the press as an instrument of instruction, yet . . . "The educational sound film is the most important aid to learning that the world has seen since the invention of the printing press," so says "How To Teach With Sound Films," published by Encyclopaedia Britannica Films, Inc., Wilmette, Illinois.

If "reading maketh a full man," there is much food for thought to be found among the A-V literature listed on page 500.

### Call to Cartoonists

If you are a cartoonist of imagination and ability, and if you are familiar with the Audio-Visual field and the activities involved, we would like to have you submit samples of your work for possible publication in Educational Screen & AVGuide. Pencil roughs are all that are necessary for examination, and they can be accompanied by captions or not. Drawings that are accepted will be paid for at current rates.

### Opinion Opens Up On Closed-Circuit TV

Without pure intent or purpose, this issue of Educational Screen appears to be strongly devoted to discussion of the relative advantages and/or disadvantages of Closed-Circuit television in the schools. Philip Lewis has given the subject complete coverage in his article "Closed-Circuit Round" beginning on page 472 and has resorted to numerous illustrations to amplify particular points. We believe this to be about the most comprehensive desecration we have encountered on the subject, to date, and recommend you read it from start to finish.

Paul Reed uses it as an argument also to support his contention, in his editorial on page 470, and you will find numerous references to the matter in the "Have You Heard" section on pages 464-468.

Despite all opinion to the contrary, television is here to stay and whether it will be closed or open-circuit . . . we opine it will play a leading and all-important role in future instruction. G.M.

## Unexpected Gift

Editor: Enclosed is a copy of a letter received from Ampex Corporation regarding a gift of a tape recorder, which I thought might be of interest to readers of the International Tape Exchange Program.

Dear Miss Terry:

"Your achievements in creating interest throughout the world in exchanging tape recordings on school activities are extremely interesting and gratifying to companies like our own who are manufacturing tape recorders.

You will be receiving in the very near future one of our new Model A112 recorders along with one of our

A692 amplifier loudspeakers which, I hope, will prove effective in helping you carry on the exchange activity you have generated. We will be interested in hearing from time to time how your work is progressing and might possibly be able to use pictures of your activity in our publications which will go all over the world to help encourage your tape exchange idea."

Phillip L. Gundy

President, Ampex, Audio Inc.  
1020 Kifer Road  
Sunnyvale, California

## Delayed Reaction to Stoddardism

Editor: I am most grateful to have the copy of your editorial, the more

so since I concur entirely in the position you take.

My own feeling that Stoddardism deserves some harsh scrutiny and can be counteracted by attention paid to the substance of education, was reflected, I hope, in a broadcast June 2 on our *New World* segment of Monitor. At that time we had Chancellor Kimpton of this University and a couple of other educators also worry about "The Schools of Tomorrow," but with some concern for what will go on inside them and, some rather explicit discouragement of the purely logistical framework of mind in which most of the discussion of this seems to be carried on these days.

If your editorial is representative of the kind of thinking and writing one can expect from *Educational Screen*, my acquaintance with that journal is long overdue. I assure you I will take steps to remedy this at once. Many thanks and cordial good wishes to you.

Edward Rosenheim, Jr.

Associate Professor of Humanities  
Director, Office of Radio-TV  
The University of Chicago  
Chicago, Illinois

## "Tribute" Continues

Editor: I have read with interest both the editorial on TRIBUTE TO A PIONEER in the May '57 issue and the letter to the Editor in the section ON THE SCREEN from Stanley McIntosh in the June issue of EDUCATIONAL SCREEN & AUDIO-VISUAL GUIDE. In the letter from Stanley McIntosh, Motion Picture Association, Washington, D.C., he indicated that "his cherished copy of Anna V. Dorris' book was stolen, and it was the only book that had ever been stolen from him."

EDUCATIONAL SCREEN readers might be interested in the fact that a copy of the book VISUAL INSTRUCTION IN THE PUBLIC SCHOOLS by Anna Verona Dorris, with the signature of "J. Stanley McIntosh" on the fly leaf, was presented to the Department of Audio-Visual Instruction Archives by the President of DAVI, Robert de Kieffer, in the summer of 1956. Stanley McIntosh can now rest assured the book is where it belongs, in the DAVI Archives. Bob de Kieffer and Stan McIntosh can now try to determine how the book was found at the University of Colorado after all these years.

Note: The DAVI Archives collection is located in the State University of Iowa Library.

Lee W. Cochran

Executive Assistant  
State University of Iowa

# Multi-Purpose Help For Projectionists

by Frank Street, Chief Technician  
Audio-Visual Center, State College of Washington

The projection cart was designed to fulfill the need for a cart that could move equipment up and down stairs, over gravel roads, etc., with ease, still providing a functionable projection stand when the equipment reached the classroom. An important requirement of this projection stand was that it must be approximately 50 inches high so as to project over the heads of the audience.

Thus the base plate (and table top) is constructed of 3/32-inch aluminum, 16 by 22 inches, bolted to the fixed legs which are bent to form a 110-degree angle with the upright. The legs are of 3/4-inch while the bracing is of 1/2-inch thin wall conduit. It is surprising how much strength is developed as the bracing is brazed onto the legs. The legs are spaced wider at the bottom than at the base plate to provide stability which is a must requirement for a good projection stand. A 6-inch long steel slug is inserted at the hinge end of the movable legs to give added strength at the hinge. The hinge is formed by two pieces of strap steel brazed to the sides of the fixed leg at the point where the angle bracing is brazed to the end of

Projection equipment cart is shown up-ended and with legs braced to form a practical and sturdy projection stand that is neither bulky nor awkward to handle.

Stand is now reversed and compactly folded and loaded with equipment. Proper balance allows as much as 100 lbs. to be transported without jars to equipment.

the fixed leg. The end of the movable legs and the slugs are drilled to complete the hinge when a 3/16-inch bolt is passed through the entire assembly. The movable leg also is used to adjust the table top level which adapts it to any kind of floor surface. The maximum movement of the leg is controlled by a chain fastened between the movable and fixed legs.

The 12-inch semi-pneumatic wheels are fastened to the legs by a 1/2-inch steel shaft inserted into a section of 1/2-inch thin wall conduit that is brazed to the rigid leg at a height to give the cart a proper balance when loaded with equipment, and allows the base plate to clear the ground about 3 inches when in a normal traveling position. The size of the wheels makes it easy to take the cart up and down stairs with as much as a 100-pound load without causing sudden jars on the equipment. Total weight of the projection cart is 31 pounds.

The first model has been in use on the Washington State campus for approximately two years and the model pictured is a later version. However, there are only slight changes from the first model. The flexibility of the cart can be improved by the use of webbing belts to secure the screen, etc., to the cart when moving equipment. Besides being a projection cart and stand, it has been found as an ideal general utility cart to have around the Audio-Visual Center to transport all kinds of equipment.

## The KEYSTONE Overhead Projector

is really a

## MULTI-PURPOSE Projector

usable for:

Standard (3 1/4" x 4") Lantern Slides.  
Tachistoslides (4" x 7"). 2" or 2 1/4" Slides.  
Strip-Film. Micro-Slides.

It's a Real Daylight Projector — the lens system concentrates the light over a relatively small area, so that clear, brilliant projection is attained.

Is small and light — weighs less than 20 pounds.  
Versatile and efficient.

Our Local Representative Will Demonstrate Upon Request.

A NEW CORONET TEACHING FILM

# Grammar: Verbs and ways we use them

There has been a constant and often expressed need for aid in teaching grammar. So Coronet Films has produced an unusual and appealing film—*Grammar: Verbs and Ways We Use Them*. Because it is cleverly animated throughout, the film will create immediate interest among students in high school and in the intermediate grades—and will make the study of verbs both entertaining and instructive. The animated sequences also serve to illustrate precisely and concretely the verbs and verb forms presented.

Familiar examples—illustrating various distinctions among verbs—show active and passive voice, transitive and intransitive verbs, verb moods and the formation of tenses. Teachers will find that a single showing will give students a basic “verb vocabulary” and that a second showing will be even more valuable. The film is one reel in length (11 min.) and available in either vivid color or black-and-white.

## OTHER NEW 16MM CORONET FILMS IN COLOR OR BLACK-AND-WHITE

### **Beginning Good Posture Habits** (Grades 1-3)

A simple, straightforward film which explains the benefits of having good posture and how children can improve their own appearances and well-being. The film also directs attention to the posture of adults whom youngsters admire—servicemen, postmen, and nurses—thus motivating better posture habits. **One reel (11 min.).**

### **Leonardo da Vinci and His Art** (Grades 7-12)

This visually rich film introduces the work of Leonardo da Vinci as the epitome of the Renaissance man. His drawings, workbook sketches, studies, and paintings tell his story and illustrate his great achievements. The continuity is enriched with scenes of Florence and Tuscany, which provide a perfect background to this study of one of the world's great creative geniuses. **1 1/4 reels (13 1/2 min.).**

### **Mealtime Manners and Health** (Grades 2-6)

This film makes the important point that consideration of others is fundamental to enjoying meals and receiving maximum benefit from food. Emphasis is placed on the link between desirable personal conduct and good

health habits. Scenes in the school cafeteria and at home—so familiar to youngsters—reinforce the film's educational impact. **One reel (11 min.).**

### **Transportation in the Modern World** (Grades 5-9)

This cohesive survey relates transportation to the modern world of industry, travel, and the growth of cities. The different modes of transportation illustrated and the various functions they serve will help pupils grasp the complexity of today's transportation systems. A brief comparison with travel in earlier times accentuates the contemporary importance of transportation. Indigenous sound in virtually every scene enhances the drama and reality of the film. **One reel (11 min.).**

### **Handel and His Music** (Grades 6-12)

This film, sixth in Coronet's Famous Composer Series, introduces students to the music of Handel—against a re-enacted background of his life in eighteenth-century Hamburg, Florence, and London. Musical selections illustrate the baroque style of Handel and the forms in which he wrote—the oratorio, masque, opera, and suite, and concise explanations of each are provided. **1 1/4 reels (13 1/2 min.).**

# Have you heard?

## Educational Radio Gets Grants

The Educational Television and Radio Center has awarded grants totaling \$42,513 to 10 organizations for the development of educational radio programs, President H. K. Newburn of the Center announced recently.

Grants were awarded as a part of the Center's three-year support plan for educational radio program development. Institutions and the amounts of their grants include:

University of Illinois, \$1,200; Indiana University, \$1,788; Iowa State College, \$3,400; Lowell Institute Cooperative Broadcasting Council in Boston, operator of stations WGBH and WGBH-TV, \$3,200; Pacifica Foundation, operator of station KPFA in Berkeley, Calif., \$1,500.

St. Louis Public Schools, \$6,700; the University of Texas, \$5,350; Union Theological Seminary, New York City, \$4,700; the University of Wisconsin, \$6,975; Michigan State University, \$3,800.

Grantees will produce programs for use on the radio tape network of the National Association of Educational Broadcasters. All programs will be oriented to the general theme of "The American in the Twentieth Century."

## A-V Advancement

Everyone who is at all concerned with A-V education in schools will be interested to learn that the Los Angeles City Board of Education now requires in the original building contract, that all classrooms in the new school buildings be darkened. In addition to this, classroom darkening is also regularly installed in the rehabilitation of old buildings. This is definitely progress in the making, and portends greater A-V advancements to come.

## Teaching by Television

A new year-long science course tops the list of "live" daily telecourses launched this September on KQED, Channel 9, as the second year's national experiment of teaching by television is started jointly by San Francisco State College and the Bay Area's community television station.

A grant of \$191,965.00, one of the largest ever given for television research and amounting to an increase of \$66,788.00 over last year's project, has been made by the Fund for Advancement of Education (an independ-

ent agency of the Ford Foundation) to San Francisco State College. In turn, San Francisco State College has contracted KQED to air the programs. A budget of \$77,000 is provided the noncommercial television station for this purpose as part of the grant.

Many new features and expansions are included in the upcoming experiment. All courses, except the Creative Arts course next spring, are open to KQED viewers and students who wish to audit or enroll for credit through the Extension Division at San Francisco State College. A total of nine units of academic credit may be earned during the fall semester.

The new science telecourse is being aired during the fall and spring semesters. One-fourth of the science staff on the faculty at San Francisco State College is involved in this phase of the experiment. This program marks the most ambitious project of a classroom nature telecast on Channel 9.

## Closed-Circuit Television Broadens Subject Course

The nation's largest dental college is using closed-circuit television as a new teaching medium to speed instruction and to keep abreast of the changing profession.

Through use of the new teaching medium, New York University's College of Dentistry hopes to broaden subject courses within the currently heavy curriculum. Thus, students will be apprised immediately of rapidly changing dental practices without need for additional courses.

Dean Dr. Raymond J. Nagle said use of the closed-circuit television system as a teaching medium is in response to educational and professional needs. If closed-circuit TV can assist us to accelerate teaching methods without sacrificing quality of individual instruction, he explained, we may graduate better informed students within the current four-year curriculum.

In this instance, about 20 minutes were expended to demonstrate and lecture to 70 students in the fundamentals of filling a tooth. Under previous methods, the course would of necessity have to be taught to the students in groups of six or seven, or as many as were able to group around a professor at a dental chair. In this fashion, each instructional period would have required about 35 min-

utes. Thus, the complete class of 70 students, taught in groups of seven each, would have required a total of 350 minutes of instruction, as against the 20 minutes by TV for the entire class.

The five-and-one-half hours thus saved can now be devoted to laboratory classes or for additional instruction in other dental practices. In addition, details which were previously hurried over can now be emphasized.

## Magnecord Moves to Tulsa

Announcement was made of the move to Tulsa from Chicago of the Magnecord Division of Midwestern Instruments, Inc., by E. J. Handley, Midwestern senior vice president, who has also been serving as acting general manager of Magnecord since the professional tape recorder manufacturing firm, founded in 1946 in Chicago, was acquired by Midwestern last December.

All of the Magnecord management and practically all of the skilled and technically trained personnel are being moved to Tulsa with the company bearing all of the expenses of the transfer.

The Magnecord Division will be located in approximately 40,000 square feet of space on the ground floor of the Midwestern plant situated on a mountain-sized hilltop overlooking the city.

Built in 1955, the plant has won First Prize as the most beautiful industrial plant in Tulsa, and is reputed to be one of the most ultra-modern and efficient in the electronics industry.

"Chicago is the electronic center of the country," Handley said, "and more, not less materials will be purchased here in the future." He further emphasized the fact that prior to the merger, Midwestern was a significant buyer in the Chicago market. In making this announcement he also reported that the Magnecord Division will maintain a sales office in Chicago.

## GLP to Engineer Closed-Circuit Project

A unique cooperative educational television project — believed to be the first of its kind in the nation — will bring varied educational training via closed-circuit into the houses of 608 families living in a public housing area in Manhattan's Chelsea district.

The project, linking the John Lovejoy Elliott Houses with Public School 33, the Hudson Guild Neighborhood

# LESS LIGHT COMES IN! LESS MONEY GOES OUT!

...when you turn a classroom into a dark auditorium...the Flexalum way!

**Principal** finds school facilities are used more efficiently when Flexalum A-V Blinds are installed. There's no need to tie up the auditorium for small groups. Instruction by projection can be going on in different classrooms at one time. Everything seems to run so much smoother.

**Teachers** can give Audio-Video instructions whenever they like. Flexalum A-V Blinds' greater number of slats, special tape construction, along with light-trap channels give much tighter closure. It's easy to turn any classroom into a dark auditorium at the flick of a cord.

**Purchasing Agent** makes a sound investment within the budget because Flexalum A-V Blinds are less expensive and longer-lasting than any combination of blackout and conventional window coverings. Superior Flexalum materials and design guarantee years of trouble-free service.

A complete range of light control from full daylight without glare...to darkness for opaque projection.

FOR SKYLIGHTS, TOO—a special modification of the Flexalum A-V Blind is ideal.

*Flexalum*  
**AUDIO-VISUAL  
BLINDS**

Write for test results and specification data to:  
Hunter Douglas Aluminum Division of  
Bridgeport Brass Co., 405 Lex Ave., New York, N. Y.

House, and the Lower West Side Health Center, will be financed by a \$200,000 grant from the Fund for the Advancement of Education. Its sponsors are the New York City Board of Education, the Hudson Guild and Language Research, Inc.

Details of the television installation, engineered by General Precision Laboratory, Pleasantville, New York, whose TV equipment is being used, show program origination facilities at three points — the elementary school, the health center, and the neighborhood house. A central television control room at P.S. 33 will contain a vidicon film chain to provide a ready

source of filmed information directly to the houses at any hour of the day. One classroom in the school will have a static, four camera TV system. Switching equipment will permit the teacher or control room operator to select any one of the cameras for proper coverage of the subject being taught merely by pushing a button.

Extension of these programs to other parts of the school is accomplished by a TV receiver in each of the building's 40 classrooms and by a GPL big-screen television projection system located in the auditorium. Throwing a 9' x 12' picture, the TV projector will enable large groups of

students to view programs of special interest at one time.

## Bell System Science Series on TV

"The Strange Case of the Cosmic Rays," third program in the Bell System Science Series, is to be presented over NBC television network on Friday, October 25, at 9:00 p.m. (EDT), 8:00 p.m. (CDT), 7:00 p.m. (MDT), and 9:00 p.m. (PST), telling the story of the chain of investigations that led to the identification of one of Nature's most baffling phenomena . . . cosmic rays.

Cosmic ray research began when scientists tried to find out what was slowly dissipating electric charges in electroscopes. Radiation from radioactive materials was known to have this effect, but some effect continued even when the electroscope was shielded completely from this known radiation.

Scientists tracked down the unknown radiation to an origin in outer space and so gave it the name of "cosmic rays." They also found that these rays took the form of invisible particles of matter rather than the form of waves, as in light and ultra violet rays. These invisible particles bombard every living creature on earth, every minute of the day and night, without leaving any sensible trace. They are so small that they pass through human beings, and you can't feel them.

This one hour long program is the third program in the new Bell System Science Series. It is produced and directed by Frank Capra, who was acclaimed for his skillful blending of scientific information and entertainment in "Our Mr. Sun" and "Hemo the Magnificent." Richard Carlson stars as "Fiction Writer" and Dr. Frank Baxter plays the role of "Dr. Research."

## Board Decides to Skip Midwinter Meeting

The NAVA Board of Directors has decided to dispense with the Midwinter Meeting for this year only. The action was taken after a discussion which pointed up the unusually heavy schedule of show activity for the Advisory Members this year.

The Western Regional Conference date and site were left in the hands of the Western Association; tentative plans call for the Conference to be held in Jan. or Feb. in either Pasadena or Long Beach, Calif.

The Board also moved to hold the 1958 Convention in the Morrison Hotel in Chicago, dates being set as July 26-29.

# The 49 to 1 Choice

—of California Audio-Visual Coordinators

## WHEELIT

The new combination transportation and projection table

In a recent demonstration of Wheelits against competitive makes, audio-visual coordinators from 50 California schools filled out evaluation sheets, making their choice and stating their reasons.

Their decision was overwhelmingly in favor of Wheelit . . . the score, 49 to 1.

Advantages which most impressed these educators were its two large Formica-top platforms of thick, sound-absorbing wood which eliminates unwelcome vibratory noises; the large pneumatic-tired rear wheels and rubber-tired swivel casters in front for easy steering; its sturdy, precision workmanship and practical design.

Folding Wheelit # C-402

Folds compactly for storage in limited space, or fits easily into auto trunk compartment.

Non-Folding Wheelit #4102

Useful for projection equipment, books, typewriters and all kinds of school supplies.

Why we say —

## WHEELIT . . . don't carry it!

- All-steel construction (except platform)
- Two thick, sound-absorbing platforms with Formica tops, 14 and 41 in. above floor.
- Load capacity up to 300 pounds
- Heavy web straps to secure loads
- Foot brake to control Wheelit and make it ready instantly for projecting films
- Ease with which it travels in straight line, around sharp corners, and up and down stairs or curbs.

See your Audio-Visual or School Supply Dealer for descriptive folder, or write Dept. ES

EDUCATIONAL SERVICES

CAMDEN, N. J.

## People in the News

NEW YORK: British Information Service films will soon again be available to all United States users. B.I.S. has announced that arrangements have now been made to replace their theatrical and nontheatrical film services, which were withdrawn last June for reasons of economy.

Under the new arrangements, Contemporary Films, Inc., 13 East 37th Street, New York, have been appointed official U.S. distributors of all 16 mm. prints of B.I.S. films.

Lester Schoenfeld, B.I.S. Distribution Manager for the past seven years, will shortly leave the organization and will set up a film distribution business of his own, handling 35 mm films. At this time he will be appointed B.I.S.'s official theatrical distributor.

The use of films for television will continue to be handled by British Information Services.

NEW YORK: Announcement of this year's recipient of the David Sarnoff Gold Medal Award has been made by the Society of Motion Picture and Television Engineers. The gold medal, together with a bronze replica and a citation, was presented to Charles P. Ginsburg, Manager of Advance Videotape Development, Ampex Corporation, on Friday, October 4, at the Society's 82nd Semi-Annual Convention, Sheraton Hotel, Philadelphia. The award is given in

recognition of recent technical contributions to the art of television, to encourage the development of new techniques, new methods and new equipment which hold promise for the continued improvement of television, preference to be given for work having reached completion within the preceding five years.

DETROIT, MICH.: Don Smith, formerly head of the University of Illinois film library, is using a fellowship to complete his doctorate at Wayne University, Detroit. He is working with Dr. James McPherson in the Visual-Auditory Consultation Bureau. Dr. McPherson has received his full professorship at Wayne.

DEARBORN, MICH.: Dr. Vernon Dameron has resigned as educational director of the Ford Museum at Greenfield Village, Dearborn, Michigan.

CHICAGO, ILLINOIS: Rev. Weldon T. Johnson and Mrs. L. B. Wuerfel have been appointed to the Editorial staff of the Society For Visual Education, Inc., Chicago, according to an announcement made by John C. Kennan, President of SVE, a subsidiary of Graflex, Inc., a member of the General Precision Equipment Corp. Group.

Rev. Johnson, who will serve as Protestant Religious Editor, has been associated with Michigan State University as administrative head of the film

department of Station WKAR-TV. Mrs. Wuerfel has been Art Director of Children's Activities magazine. In her new position, she will be concerned with the various phases of art as they relate to filmstrip production at SVE.

NEW YORK: Mrs. Anne Koller, who was recently elected a vice president of Roger Wade Productions, Inc., has been chosen to head a new film merchandising department in the company as well. The new department will concentrate on the practical problem of getting maximum results from industrial promotional and educational motion picture films and slide-films.

## Calendar of Events

October 12, the O.A.V.A. Fall Meeting will be held in Ashland at Southern Oregon College.

November 10-16 marks the 37th Annual Observance of AMERICAN EDUCATION WEEK, during which time some 20 million people will visit the nation's classrooms. Millions more will be made school-conscious through the newspapers, magazines, radio, TV, and numerous special events.

Sponsors of American Education Week are the National Education Association, American Legion, U.S. Office of Education, and National Congress of Parents and Teachers.

November 13, 14, 15, at the U.S. Grant Hotel in San Diego during these dates, will be held the 1957 Annual Conference of the Adult Education Association of the U.S.A., National Association of Public School Adult Educators, and the California Adult Education Administration Association. Here will be brought together perhaps the largest group of adult educators ever to assemble; men and women responsible for making policy and purchasing decisions in a wide variety of educational, civic, welfare, health, industrial, labor, religious and other groups.

(Next Year's Important Dates)

AMERICAN ASSOCIATION OF SCHOOL ADMINISTRATORS, St. Louis, Feb. 22-26; San Francisco, March 8-12; Cleveland, March 29 to April 2.

DEPARTMENT OF AUDIO-VISUAL INSTRUCTION, N.E.A.: Minneapolis, April 18-23.

NATIONAL AUDIO-VISUAL ASSOCIATION, Chicago, Hotel Morrison, July 26-29.

INTERNATIONAL CONFERENCE OF RELIGIOUS AUDIO-VISUAL EDUCATION, Penn State, Aug. 17-24. (In 1959 the Conference will again meet at Green Lake.)

# NOW - audio-visual education in EVERY room

## LUXOUT

### DRAPERIES

LuXout Light Control Draperies will add beauty and warmth to any classroom . . . plus convert it into an audio-visual projection room in seconds!

Another new LuXout Drapery feature

. . . the exclusive "GREEK KEY"  
(Patent Pending)

The "GREEK KEY" is a special fabricated heading seam developed by LuXout Draperies that has been highly commended for its outstanding strength and durability wherever used.

LuXout Light Control Draperies are available in a wide assortment of colors and styles to complement any color scheme. Consult your LuXout Distributor or write for free color listing, samples and descriptive brochure before you select any form of light control.

# F & B FILM REPAIR & SPLICING BLOCK

## REPAIR TORN AND DAMAGED SLIDE FILMS

## REPAIR TORN AND DAMAGED 16MM SOUND FILMS

MY MAGIC MYLAR-REPAIRED FILMS PASS THROUGH THE PROJECTOR EASILY

SAVE YOUR TORN, BADLY DAMAGED, GOUGED Slidefilms and movie films. Replace torn and missing sprocket holes. They can now be repaired speedily, efficiently, economically, and PERMANENTLY—by using the F&B Film Repair and Splicing Block in conjunction with the Magic Mylar Transparent Splicing Tape.

Here's how bad tears, and missing perforations can be repaired.

The F&B Film Repair and Splicing Block provides a solid base registration of the sprocket holes so that the Mylar Splicing tape can be applied accurately on both sides of the film.

Also, the block is used for strengthening conventional lap splices—and to make butt splices. The upper channel comprises a complete splicing block for 1/4" magnetic recording tape. The F&B Film Repair and Splicing Block is made of precision milled anodized aluminum. The block is completely non-magnetic. Magnetic—or magnostriped film may be repaired in perfect safety.

THE FBFRSB IS A BLESSING TO US. WE SAVED OVER \$200. WORTH OF FILM WHICH WOULD HAVE BEEN DESTROYED.

I REPAIRED 10 UNUSABLE SLIDE FILMS AT A COST OF 12¢ WORTH OF MAGIC-MYLAR

I ORDERED 30 BRAND-NEW SLIDE FILM SUBJECTS INSTEAD OF THE USUAL 20 NEW SUBJECTS AND TEN REPLACEMENTS FOR DAMAGED ONES.

### MAGIC MYLAR TRANSPARENT SPROCKETED SPLICING TAPE

- CLEAN ● Self-Sticking—No Cements Required
- DURABLE ● Tear Strength Greater Than Film
- SAFE ● 1/1000" Thick—Passes Thru Projector Easily
- INVISIBLE ● Optical Transmission of Spliced Frames Unaffected
- ECONOMICAL ● No Frame Loss When Repairing Torn Film or Perforations

THE FBFRSB IS REALLY A 3-WAY SPLICER. 35MM, 16MM & 1/4" TAPE TOO.

# RELIC OF THE PAST

There are lots of people — and all are taxpayers — who are becoming increasingly concerned about the high cost of school buildings. Just last month in a magazine of huge circulation an article on this subject referred to these new school buildings as “palaces.” Yet even the people who are concerned about school building cost think that it’s necessary for a school to have an auditorium.

What a ridiculous idea a school auditorium is in this day and age! A school auditorium is an anachronism — a device completely incongruous with what we know. It’s a traditional appendage to a school building we think we cannot do without, because we don’t think. A school auditorium is an extravagant luxury that only a few communities can really afford. It is an unessential obsolete machine. A school auditorium is a RELIC OF THE PAST!

We don’t know when the first auditorium was built into a school. But in my own home town, the Free Academy they built eighty-five years ago had a hall on the fourth floor which served as an auditorium. It was needed then. How else could the principal speak to all the students at the same time? Where else could student orators declaim for all their fellow students to hear?

Through the years the auditorium has served a most valuable function in the instructional program of schools. It has been a place where students could be assembled to hear what the principal has to say, to hear important announcements, to see

and hear visiting lecturers and entertainers, to see and hear student or professional musicians, to see and enjoy dramatic performance and motion pictures, and to see fellow students awarded for achievements. In the past the school auditorium has been a fairly good device for making it possible for everyone in the school to see and hear the same thing at the same time. But there have been limitations. As school size increases it becomes impractical to build auditoriums large enough to accommodate all the students at once. There are always acoustical problems. And the person in the back row never sees as much as the people up front. Even with such limitations the auditorium has been a fairly good device for its time.

In an electronic age the school auditorium is a relic of the past. With closed circuit television built into a school, practically every purpose and function formerly served by a school auditorium can be achieved much more efficiently and effectively.\* Every single student, no matter how large the school, can see and hear what all others are seeing and hearing at the same time. All students can attend an assembly and have a front row seat without even leaving their classrooms.

Closed circuit television can be built into a school at a fraction of the cost of building an auditorium; and once it is installed can additionally serve as a basic communications tool for daily instructional purposes.

In fact, television is so inexpensive when compared to auditoriums, that for the cost of a high school auditorium a complete noncommercial educational television station could be built. Then, with open-circuit television, anyone in the community could have a front row seat for an assembly program without even leaving home.

*\*When my teen age daughter read this she said, “What about pep rallies?” She readily agreed, however, that these could be held in gymnasiums and would be much more appropriate than in auditoriums.*

*Paul C. Reed*

# CLOSED - CIRCUIT ROUNDUP

by Philip Lewis

Director of  
Bureau of Instructional Materials  
of Chicago Public Schools

Despite the varied opinions and beliefs current regarding the place of Instructional Television in the educational scheme of things, it is heartening to note the almost unanimous agreement that effective television teaching involves the fullest use of audio-visual devices along with other instructional materials. Such concord among educators promises a bright future for the A-V field but brings with it the attendant responsibility that the audio-visual specialist must keep pace with the fast-moving TV field within a curriculum framework.

**M**ORE than 150 educational institutions in the United States reported having closed-circuit television facilities as of the first half of this year. It is a reasonably good estimate to double this number to arrive at a more accurate picture of current installations, since it is very difficult to locate all of the places so involved.

At this state of the art the number of experimental centers is relatively small, considering the total number of schools in this country. However, a substantial body of opinion and conclusions are available to provide guidelines for future planning and trials. It is important to preface the presentation to follow with the statement that the greatest need in this field is the implementation of a coordinated, multi-faceted study based upon research techniques designed to yield valid findings.

## Closed-Circuit TV Is Many Things

A few years ago it was quite easy to define CCTV as captive television available only to viewers whose receivers were connected by a common coaxial cable. Today a more liberal interpretation is necessary. Systems can now include coaxial cable outlets, a microwave link, and even a low-power transmitter without losing its CCTV identity. Theater television and all pay-as-you-go TV systems can also be considered as closed-circuit installations. Because of these developments a more inclusive definition must serve — CCTV is a system whereby television images are distributed for viewing to a selected audience. Selectivity is achieved by ingenious electronic or mechanical arrangements to limit the audience according to a preconceived plan.

In-school viewing of broadcast TV programs necessitate, in many instances, the employment of a master antenna distribution system to provide optimum signals at classroom locations. Such a facility can also be utilized for the transmission of locally produced programs within the school. It becomes unwise, therefore, to try to select between broadcast and closed-circuit TV on an either/or basis.

## Equipment Arrangements Employed

A study of the facilities employed in institutions working with closed-circuit TV reveals several definite equipment patterns influenced by varying needs and objectives:

1. For magnification purposes within a given room or area the cameras and receivers are arranged to electronically enlarge the reproduced images of items that are normally too small to be seen by groups of any appreciable size. In some instances repeating receiver screens placed at work stations are used to assist laboratory students to follow progressive sequences or operations that are to be duplicated in the development of skills. Micro as well as conventional slides scanned by the TV camera can be used in a similar manner to stimulate discussion and inquiry. Shop demonstrations are particularly well adapted to this treatment.

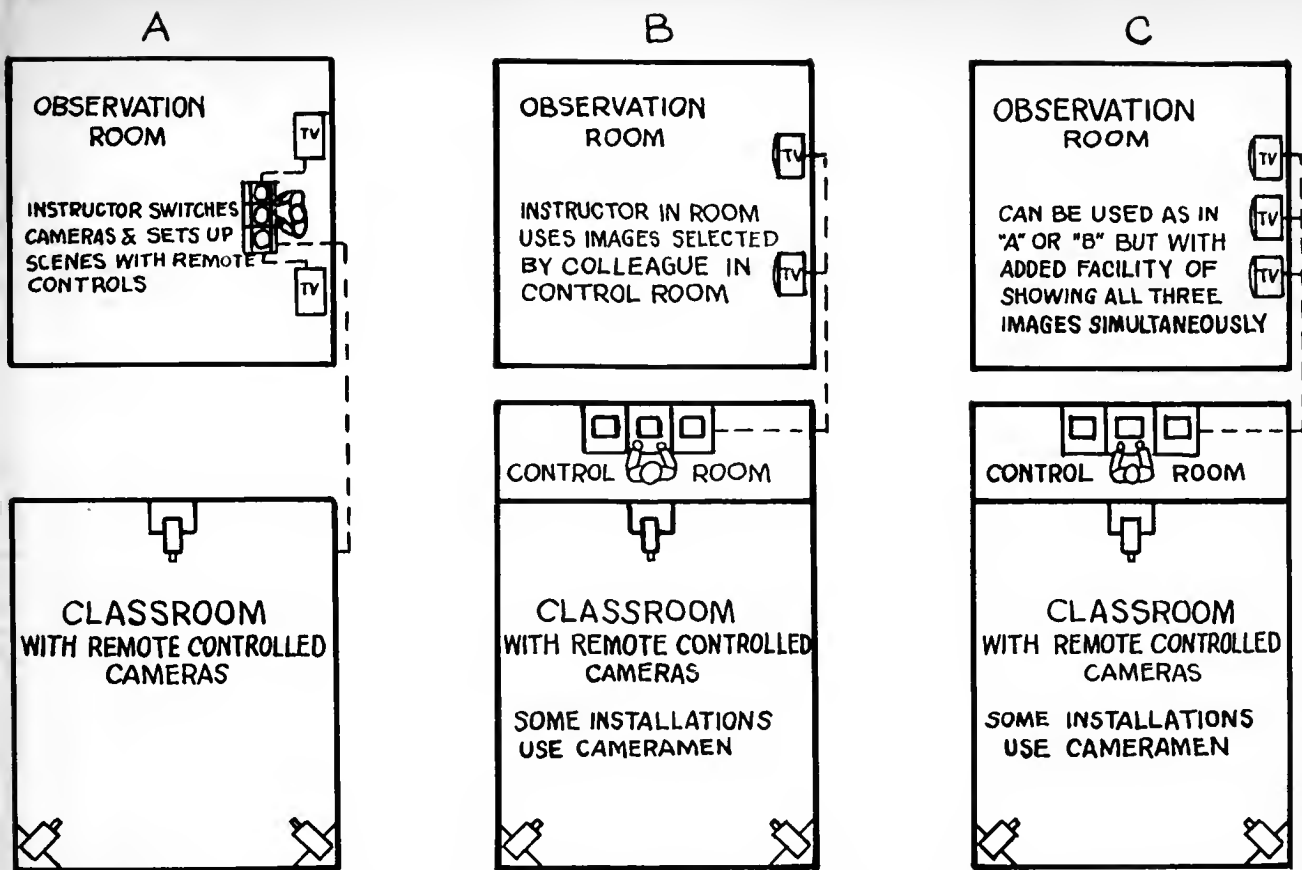

2. Pickup from originating room(s) with distribution to any number of viewing locations is perhaps the most versatile application of closed-circuit television. This approach embraces such applications as observation for pre-service teachers in connection with classroom methods of instruction, techniques of guidance and counseling, direct teaching to multiple classrooms, some types of mass test administration, and remote viewing of dental and surgical procedures.

Figure 1 shows some of the arrangements being tested for observation purposes. Diagram A illustrates the set-up with three remote-controlled cameras installed in a regular classroom. The methods teacher in the remote room operates a control console and is able to set up likely shots and switch cameras as desired. At the same time discussions can be held with the methods group without disturbing the class under observation. This permits the

Instructor to have complete control of what is seen by his class. Diagram B employs a separate control room to relieve the methods Instructor of the need to do the camera work and switching. Current opinion suggests that the person in the Control Room is another Instructor or someone completely familiar with the objectives of the course. Diagram C is similar to B except that another TV receiver has been added. As the observation group develops skill in selecting pertinent activities shown on the TV screen, all three cameras are used simultaneously, and each receiver shows a different classroom aspect and image. The advantage inherent in this latter approach is the ability to "catch" the fleeting, but important occurrences in the classroom.

- a. The addition of a Central Audio-Visual Distribution System to the above will permit motion pictures and other visuals to be distributed electronically via the coaxial cable to the classrooms. The provision of remote controls will give the teacher the desired operational control to start, stop, and reverse the projector. One of the major companies in the field of TV distribution systems is perfecting an arrangement whereby all remote control functions can be triggered by signals using the same coaxial cable employed by the video system. This will greatly simplify installations and the number of conductors currently required for such a complex layout.

3. Studio facilities are being used for training in TV production, to provide opportunity for journalism students to train for news telecasting, for speech majors as part of their advanced training, for purposes of recording instructional programs on kinescopes designed for later use on distribution or broadcast facilities, and for originating lessons for direct TV instruction where preference subscribes to such an arrangement rather than a regular classroom. A rather unique application of the latter approach is being tried at City College, Los Angeles, California. The equipment arrangement is shown in Figure 2, and incorporates three fixed cameras attached to an overhead beam. Each is focused on a different area involved in the instructional process. A fourth camera is affixed to

## TV INSTALLATIONS FOR CLASSROOM OBSERVATION PURPOSES

Figure 1

a tripod and dolly on the floor of the studio, and may be repositioned before each lesson. This TV-eye is equipped with a remote-controlled zoom lens. The Instructor has a small switcher box on the table where he works, and can determine when a camera image is to appear on the screen in the remote, coaxial cable-connected classroom(s). The person at the monitor

console in the control room adjusts the camera images for best quality, and operates the zoom lens on verbal cues from the Instructor. This permits maximum freedom for the Instructor in pacing the lesson and calling the shots as he sees them.

4. Campus and Community Systems involve the interconnection of several buildings in separated locations with

coaxial cable and/or microwave relay to permit pickup and distribution between the units involved. Laboratory and campus schools, as well as off-campus schools can be tied-in with the training institution to provide vital observation experiences for teacher-trainees during their entire formal sequence of instruction. Also, a mobile truck unit can relay signals from field trip locations to bring these excursions, although vicariously, to many students who could not otherwise make the trip. Entire school systems can be tied in on the cable for purposes of selected, direct instruction to children, for in-service demonstrations, for board and staff meetings, and for the distribution of motion pictures of import.

5. Monitoring Systems are used to safety-check and supervise activities on playgrounds and in locations where it is deemed wise to survey conditions that do not necessarily require the continuous presence of personnel. Experimental work, heating and cooling plant operation, and pressure gauge reading are some examples where remote monitoring is effective. In some isolated instances, "Big Brother" applications have been tried with pupils. Educationally such experiments are to be decried as regrettable distortions of the real value of the tool.

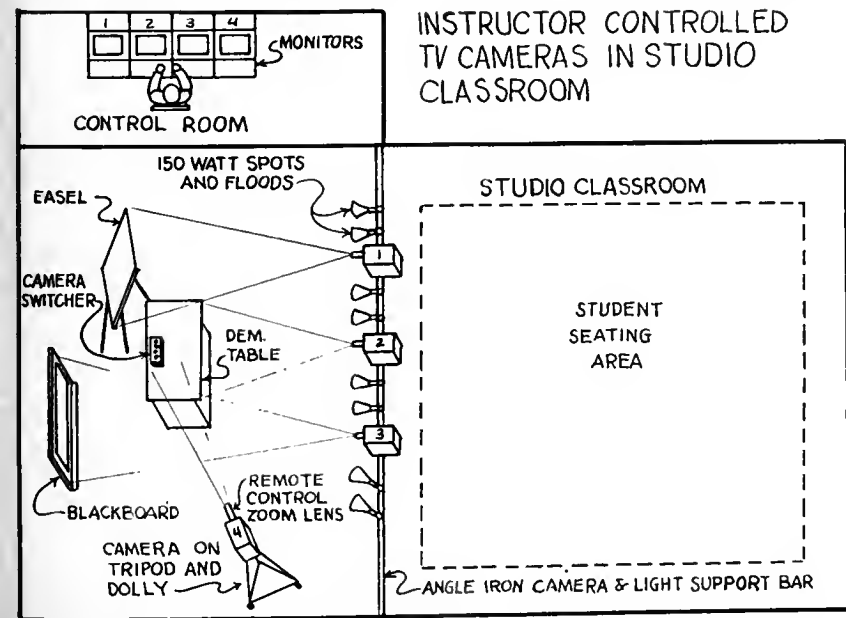

Figure 2

## Recommendations for TV Planners

Based on current reports and observations of TV investigations it would be well for persons having the responsibility for planning future installations to observe the following:

1. Classrooms to be designated as program originating locations should be:

- a. Acoustically treated to prevent echoes and reverberation in terms of audio pickup. Special floor treatment is essential to reduce the level of noises normally produced by shoe scuffing and the random movements of chairs and desks. It might be well to pre-check the type of furniture to be used for this same reason.
- b. Specially equipped for effective audio pickup at any point in the room. This factor represents one of the most serious problems at present. Consultation with Mr. Karl Kramer of the Jensen Manufacturing Company resulted in the formulation of an audio pickup arrangement that promises to be both satisfactory and economical. Figure 3 indicates the pickup pattern of high-frequency cone speaker tweeters when used as microphones. These cones tend to

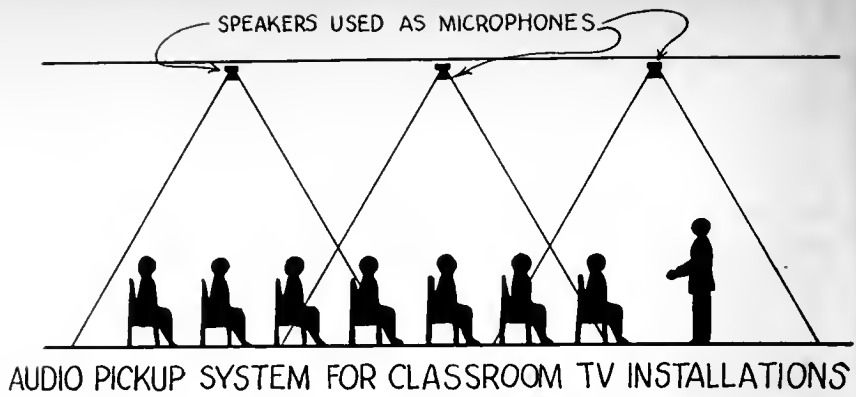

Figure 3

longer will a sneeze by a pupil under the conventional microphone sound like an explosion, while the pupil seated beyond the fringe of the pickup pattern cannot be heard at all. Figure 4 shows how six of the speakers, connected in parallel and fed into a matching transformer, can be employed to service a conventional classroom. Of course, the number of speakers used will vary with the height they are mounted above the floor according to their zone of pickup sensitivity.

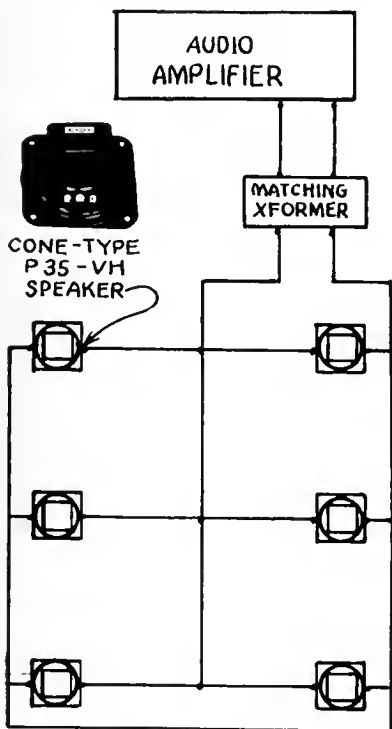

- c. Equipped with diffused light sources designed to supply between 100 to 200 foot candles of illumination. The new high output cold cathode tubes seem excellent for this purpose. Some back lighting and modeling lights should be provided in strategic locations to produce a less flat effect than would be true with only the diffused light source. Laboratory reports indicate that improved Vidicon tubes that are sensitive under lower light levels will appear in the next few years.
- d. Provided with adequate ventilating facilities to prevent the build-up of excessive room temperatures due to the heat released from the lights.
- e. Considered for equipping with remote-controlled camera equipment. Accessories now available permit cameras to have remote pan-tilt heads, automatic lens changer turrets, remote focusing and iris control, so that all functions can be initiated from an adjacent control room to prevent disturbing classroom rapport—as can hardly fail to happen when cameramen are present. Control rooms can be operated “blind,” if desired, without windows opening in classrooms.
- f. Provided with talk-back facilities and connections for two-way video for special applications in certain

instructional situations.<sup>1</sup> An even newer development described by Mr. Fitzroy Kennedy of Spencer-Kennedy Laboratories Inc. is illustrated in Figure 5. Here, through the use of filters, two sets of signals can travel through a coaxial cable system in two directions simultaneously. All low frequency channels are sent in one direction, while the high frequency channels are diverted in the other direction. The signals traveling against the amplifier are filtered out and around to go into the input of the amplifier. Upon emerging as strengthened impulses, another filter again circumvents the amplifier and allows them to continue on their way. This same arrangement is repeated for each line amplifier, and holds exciting possibilities for increased versatility of CCTV systems with fewer cables required.

2. Direct Video transmission of images from origination room(s) to viewing rooms results in images with measurably greater definition, but requires that receivers be modified to accommodate this type of signal. This change can be accomplished with conventional receivers, or the more expensive monitor-type viewers can be used without modification. Transvision, Inc., is now offering a school-designed TV video or R.F. transmission signals. Initially, direct video transmission was limited to runs of a few hundred feet, but recent developments in cables and amplifiers now make it possible to run lines as long as one mile.

3. Radio Frequency (R.F.) transmission of TV images is the more flexible method of distributing signals. Loss of quality is due principally to the limitations inherent in the conventional and economically-priced receivers. It is possible to engineer a high quality R.F. system, but the cost involved for receivers will be increased. For general

<sup>1</sup>*Closed-Circuit TV—now and for the future*, by Philip Lewis, Educational Screen and Audio-Visual Guide, September, 1956.

EQUIPMENT HOOKUP FOR AUDIO PICKUP SYSTEM

Figure 4

eliminate many of the reverberation frequencies, and enable a low but uniform level of pickup to be established in a given room. No

## SYSTEM FOR SENDING SIGNALS TWO WAYS ON A SINGLE COAXIAL CABLE

Figure 5

viewing, however, the ordinary TV receivers will do very well. Where precise detail is required, as in laboratory work, it would be well to consider a higher definition system. When groups of buildings are to be interconnected on a campus, however, or when long lines are to be run between widely separated points, it is essential that R.F. is employed. Some installations utilize a combination of transmission methods—R.F. for the long distance carrier, and direct video for local units or blocks of classrooms. R.F. has another distinct advantage in that externally received signals from outside stations involving UHF and VHF can all be changed to VHF at the central distribution point and tuned in on conventional receivers without modification in this latter equipment.

4. Where manually operated TV cameras are installed, it is essential for effective operation that these are fitted with electronic viewfinders. On the other hand, cameras that are permanently installed or those operated by remote control need not have this facility, and will result in an appreciable savings. Some cameras are constructed with circuits known as "random sync." These are suitable for many applications, but RETMA sync should be specified if the equipment will ultimately be used for broadcast purposes, or in combination with accessories requiring such capabilities for proper function (for example a film chain<sup>3</sup> feeding certain large screen projector receivers).

5. In existing buildings it may be possible to run coaxial cables through heating return ducts, or channels and cavities formed by ceiling furring strips

without involving a great deal of remodeling. Certain of the popular flat metal moldings can be installed without disfigurement of existing walls where the aforementioned possibilities are not feasible. When planning new construction, however, it is wise to provide conduit runs of generous size to accommodate coaxial cables, intercom circuits, and remote control cables. Considered recommendations suggest that 1½" diameter conduit is used for most runs, with 2½" conduit for trunk lines and where remote control cables are to be included. Such planning will be able to take care of future developments without obsolescence of current provisions.

6. Popular sizes of TV receivers for classroom purposes are 21" and 24". Some 27" and 30" sets are being employed. It must be remembered that the biggest direct-view screen is not always the best for every purpose. As the screen size becomes larger the 525 lines that make up the image become more widely separated, and the viewers must sit further back from the receiver to achieve resolution. Other experiments indicate a preference for having multiple receivers in a single room, with students and sets arranged to permit small group viewing.

Unfortunately, most current table model TV receivers are equipped with side-mounted loudspeakers. This type of sound source makes it difficult for all in a classroom to hear effectively. One solution is to install a separate speaker in a cavity-cabinet on top of or beneath the television receiver. Both units, of course, must be mounted in some kind of stand to elevate the center of the screen approximately 48" to 54" about the floor. If the receiver

is to be moved from room to room, make certain that rubber covered casters at least 4" in diameter are provided to minimize bumps and shocks. If a tilted safety glass is not built into the receiver cabinet, it is necessary to arrange a mechanism to raise the back end of the set to direct ambient reflections toward the floor. Recent events make it a serious consideration whether metal cabinets should be utilized for school purposes. The wooden and plastic cabinet products are free from the possibility of faulty circuits conducting high voltages to the set enclosure. Additional facilities sometimes include locking panels to prevent unauthorized manipulation of controls.

7. A look at new developments that will ultimately affect video screens in schools concerns progress being made in the field of color television. At present Dage Television now has on the market TV cameras utilizing three Vidicon tubes for multi-color purposes. Such advances will surely be incorporated into instructional installations since some applications are impractical without the use of color—oil painting and color mixing techniques, demonstration of optics and the light spectrum, transmission of color movies on the closed-circuit, to name a few. The Kaiser Aircraft & Electronics Corporation is producing a Thin Cathode-Ray Picture Tube for use in military aircraft and other restricted fields. (Figure 6). When this device is released for general use, the electronic blackboard will become a reality, and the tube can be recessed in the wall of the classroom or framed and hung in a manner similar to any picture. Experiments are now going forward to perfect a color

Figure 6

tube along the same lines. Sanabria of American Television has demonstrated a system for producing 3-D TV, and General Electric is marketing a comparable item — stereo TV with color — for use in radiation laboratories where depth together with color perception is desirable in the handling of radioactive materials with remote controls. It is comforting to know that even with such revolutionary developments, existing coaxial cables will be able to adapt to the changes without replacement. Coaxial cables designed to be exposed to the elements have been improved to prevent progressive deterioration due to sunlight. Such cables can now withstand exposure far in excess of ten years.

### Examples of Instructional TV

The versatility of CCTV causes much confusion when educators discuss this many-sided facility. Dr. Keith Tyler divides the field as follows:

- a. Total teaching by television
- b. TV teaching supplemented by classroom instruction
- c. Classroom instruction supplemented by television
- d. Television as a teaching aid

Such a division permits better objectivity in planning and in analysis. Due to space limitations, it is impossible to list even a substantial number of the experiments now being conducted with closed-circuit television. Therefore, only a few selected examples will be described briefly to illustrate the varied approaches and levels of inquiry. The listing is a random one and not intended to convey any special order of importance.

1. Pennsylvania State University initially attempted to compare the effectiveness of conventional university courses taught on the closed-circuit with the same techniques and approaches conventionally used in the classroom. Nothing, as far as possible, was changed because of the TV media. Present experimentation is aimed at

### A. THIN CATHODE-RAY PICTURE TUBE DEVELOPED BY KAISER AIRCRAFT & ELECTRONICS CORPORATION

the utilization of every instructional resource that will make TV teaching most effective.

2. Stephens College scheduled all first year students to meet two times a week in small groups in 50 separate locations on the campus. Here they would view and listen to twenty minute closed-circuit telecasts dealing with some interdivisional, interdisciplinary course presented by outstanding visiting professors. After the video presentations, each group guided by members of the regular faculty proceeded with 40 minutes of discussion stimulated by the telecast.

3. University of Minnesota converted a Laboratory High School classroom for studio purposes to enable education students in their junior year of preparation for high school teaching to have their laboratory observation experiences over TV. Kinescopes made of the

observations were used to trigger subsequent discussion periods held later in the week.

4. Evanston Township High School has embarked on a program of testing the possibilities of giving instruction in typing and in speech over CCTV along with the employment of teaching assistants. This system employs a talk-back facility to enable students in remote classrooms to ask questions of the television teacher.

5. Hagerstown Educational TV Project consists of the progressive implementation of an extensive closed-circuit system that will eventually connect all of the Washington County Schools into one instructional network. At present several elementary schools and some high schools are tied in on the cable, and three originating studios have been activated in the teaching center. The purposes of the project include direct instruction in basic subject matter offerings, supplemental motivation and enrichment of the curriculum where feasible, extension of in-service training of teachers, interpretation of the schools to the public, and improvement in the quality of the school program. Subjects involved in the direct instruction program for the semester just ended include Advanced English, General Senior English, United States History — Grade 11, Geometry — Grade 9, General Science — Grade 9, Science — Grade 6, Arithmetic — Grade 5, Social Studies — Grade 4, Music — Grades 4, 5, 6, Reading Experiences — Grades 1, 2, No. Experiences — Grades 2, 3.

Television helps extend the scope of teaching. Dr. Kenny, Professor of Education, College for Teachers of Albany employs observation console for his class.

6. The New York State Department of Education initiated an instructional television program in the Fall of 1956 at the State University of New York Teachers Colleges at Brockport and Albany, and at the Union Free District No. 5 at Levittown, Long Island. This three-pronged experiment is planned around full-time classroom teaching, and is designed as far as possible to stimulate the activities of regular classroom instruction. At the teachers college level, observation of classes via TV is an additional activity.

7. Miami University involved 3300 freshman and sophomore enrollments in CCTV courses in economics, air science, physiology, and others. Close check is being made with large and small groups to test the effectiveness of the approach.

Each morning WBRE-TV, Wilkes-Barre, Pa., presents a televised science series program planned by the city schools. As many as 200 students of the Elmer L. Meyers High School watch the programs in the school auditorium. Projection Television permits viewing by large groups, and newest development by General Precision Laboratory Inc., Pleasantville, N. Y., permits note taking light levels in viewing rooms.

8. TV Instruction over Broadcast Facilities must be included in the overall picture of CCTV possibilities. The present use of kinescopes projected as motion pictures in the classrooms, and those distributed over coaxial cable systems, indicates that this will be a growing pattern in the years to come. This method would not upset the schedule of the school in order to coincide with broadcast times, and the use of the Videotape Recorder in the future will add many obvious advantages. Some major problems are already making themselves known in this connection. Some Teachers' Unions have gone on record opposing the unlimited use of kinescopes of courses without additional compensation and royalties. Educational film producers find that CCTV raises questions of legal clear-

ance where use of films or filmstrips is involved. As a result the producers were polled to determine their view on the subject by the National Audio-Visual Association. In a release dated December 14, 1956, their conclusions are stated as follows:

... In essence, the producer's position on closed-circuit television is the same as it is on regular television broadcast use of his films or filmstrips. His position is based on his copyright protection against any unauthorized form of reproduction, electronic or otherwise. Television, whether regular broadcast or closed-circuit, does constitute an electronic form of reproduction, and therefore a right that is not conveyed with the purchase of a motion picture or filmstrip print. For this reason, the National Audio-Visual Association

recommends that any agency contemplating the use of films or filmstrips over closed-circuit television clear their use with the producer just as they would do in the case of contemplated use on a regular TV broadcast.

It is felt, however, that these problems will be worked out to mutual satisfaction as more experience is gained with this new tool, and it is interesting to make mention of some of the experiments being conducted with broadcast TV:

a. WTTW in Chicago is offering Junior College credit courses via TV. During the first year of operation the presentations were telecast live during the morning hours, but were repeated from kinescopes during the evening

hours a week later. The program is progressively building toward the objective of offering the entire two-year program of general education in this way. Innovations are planned to include neighborhood centers for consultation purposes. One course was offered by the Chicago Teachers College this summer to enable persons with some advanced training to begin to qualify for public school teaching. In addition, the EBF Physics films as prepared by Dr. Harvey White and used in the Pittsburgh Schools have been beamed to 20 high schools for gifted students in their Sophomore year.

- b. WQED in Pittsburgh telecasts daily instruction to schools in the areas dealing with fifth grade reading, arithmetic, and French.
- c. KETC in St. Louis programs instruction in second grade spelling, ninth grade general science, and ninth grade English composition.

### **In Conclusion**

No attempt has been made to evaluate the activities involved since this is not the purpose of the presentation. However, the tremendous scope and potential of closed-circuit TV should be apparent from even this brief overview. All who are in the field of education are obligated to give CCTV a second look, and in some instances a first glance. Evaluation must come from you and from your efforts in using this instructional tool.

# USOE TRAINING FILMS—A UNIQUE EXPERIMENT THAT PAID OFF

by Seerley Reid, Chief  
Visual Education Service  
Department of Health, Education, and  
Welfare, Office of Education

SIXTEEN years ago, shortly before Pearl Harbor, the first U.S. Office of Education training film was produced — ROUGH TURNING BETWEEN CENTERS. Four years later, with the end of World War II, 457 such films had been completed, bringing to a close a unique experiment in Government film production and distribution — and a most successful one!

The story of USOE's visual aids for war training production program<sup>1</sup> is well known and remembered — including the frantic months of May and June 1945 when more than 150 motion pictures and a like number of filmstrips were completed with some 1,200 reels of original negatives and sound tracks, master positives, and dupe negatives delivered to De Luxe Laboratories during a single month.

The period since 1945 has not been nearly so dramatic but its accomplishments have been equally significant in the total story of USOE training films. For one thing, the films have maintained a remarkable sales record ever since they were produced. During the 1941-45 war years, 31,432 prints were sold; since 1945, 47,391 prints have been sold — a decline in the annual sales rate, it is true, but still quite an accomplishment for war training films after the war had ended. Curiously, inexplicably, significantly — choose your own adverb — 1956 sales were 35% higher than 1955 and six-month sales in 1957 were 50% greater than during the comparable period of 1956.

A second accomplishment since the end of World War II has been the use of USOE training films in the Marshall Plan productivity programs in Europe and, to a lesser degree, in the Point 4 program in Asia, Africa,

and South America. In the latter instances, foreign language sound tracks have been magnetically produced, but the International Cooperation Administration is now planning to make optical tracks of certain USOE films in Spanish and some Asian languages.

It is in Europe, however, that USOE films have been most widely translated — into Danish, Dutch, French, German, Italian, Norwegian, Swedish, Turkish, and Serbo-Croat — and used first in the European Recovery Program sparked by the Economic Cooperation Administration and now in the productivity programs of the Organization for European Economic Cooperation. Over one-half of the USOE training films, produced for war training in 1941-45 were used in war recovery programs ten years later! And some 6,500 prints in nine different languages are still in use in Europe today.

Probably the most unusual feature of the USOE training films — certainly a unique aspect so far as Government films are concerned — was the requirement of the 78th Congress that the entire cost of production of the films should be repaid from the sale of prints. The exact language consisted of a proviso in the visual aids for war training appropriation acts for fiscal years 1944 and 1945 which stipulated that these appropriations might be expended "provided that copies of slides and films hereafter made shall be sold at a price sufficient to pay the whole cost of production of such slides and films."

Since 1944 the contractors handling sales distribution — Castle Films through 1946 and United World Films since 1947 — have paid to the U. S. Treasury a royalty on every print sold. The Army, Navy, and other Government agencies reproducing their own prints of USOE films have paid similar royalties in accordance with a decision of the Com-

troller General of the United States that such was the intent of Congress. And U. S. and other government agencies have been encouraged to translate USOE films into foreign languages in order that additional royalties might be obtained from the sale of such foreign-language versions. To date over \$460,000 has been repaid to the U. S. Treasury toward amortization of the production cost of the USOE training films. And royalties continue to come into the Treasury.

USOE training films have indeed "paid-off" — in the 1941-45 training of war workers, in today's training programs of schools and industry, in technical assistance programs in Europe and throughout the world, and in providing income to the U. S. Treasury. They have also "paid-off" through the continuous contributions to audio-visual education of the individuals who ten years ago imaginatively conceived and directed their production and distribution. These USOE film "graduates"—Floyde Brooker, Stan McIntosh, Paul Reed, Al Rosenberg, and others—are known to all SCREEN readers. The U. S. Office of Education is deeply indebted to them.

"May I ask where you learned to clean film . . . ?"

<sup>1</sup>See particularly Floyde Brooker's explanation in *Training Films for Industry: Final Report on the War Training Program of the Division of Visual Aids for War Training*, Office of Education, 1946.

# Reading by Projection

by V. R. Nicholas

A-V Coordinator  
Meridian School  
Kokomo, Indiana

**W**E READ for fun. We read for relaxation. We read for many reasons, but, when repeated day after day, reading can become a humdrum thing if we let it. Many teachers inject different techniques into the practice to remove this feeling of repetition and sameness. Many of the methods include such ideas as dramatizations, picture drawing, tape recording, dictionary work, and story telling. Exhausting these media, we were looking for something novel and practical that did not detract from efficient use of time.

With the advent of acetate plastic for use on the overhead projector and for lifts (taking pictures from certain magazines by the use of rubber cement) a new idea was developed for us. We thought it over, planned the time properly and decided we would use less time and perhaps end up with something better. This is what we are constantly striving for. Something better!

On the first day we silently read the story that was associated with our other ideas and studies. This we had to do anyway. Next each child was given a piece of plastic acetate that measured  $3\frac{1}{4} \times 4$  inches. A size that would fit the slide projector. We then went through the story again and assigned a certain paragraph to each student. The children then buffed one side of the plastic with fine steel wool. Then their task was to draw a picture on the plastic, which was to represent the idea they had obtained from reading the paragraph. The pictures were then colored with regular crayons. Some of the colors came through true, but others had to be colored with translucent crayons for projected materials.

Following this the pictures were projected and the child that had the paragraph for each picture read it aloud. While he was reading another

student recorded the reading. This took no more time than for a regular class of oral reading. When the entire class had finished, the tape was played and the pictures again flashed, while the rest of the class followed the reading and studied the pictures. As the teacher, I could determine the comprehension by seeing the drawing.

Outcome? At the very least—satisfaction of tackling and finishing a job. As one excited child proclaimed when it came time to read — “That’s *my* picture,” and promptly forgot where his place was for a second or two. But in addition to the satisfaction, the reading is becoming less faulty. More care is being taken to know all of

Reading is improved by visual association of ideas and correlated with the subject of Art. The child reads, then draws what he reads, and sees it projected on the screen at the same time his tape-recorded reading is played.

Interest? Definitely! This is the second week and everyone has already erased his last week’s picture and has the next one ready for projection. That indicates interest to me. Doesn’t it you?

Preparation? No one likes to hear his mistakes, but he does like to hear his voice. Even the students who are very slow readers sound very good on the tape, because they look up words they don’t know and ask for help on others. I’m hoping this will eventually lead to self-exploration of reading skills.

the words. And when the paragraph assigned is read, it leads to wanting to find out a little more about what went before and what is *going* to happen. The dictionary is out a little more often and new skills are being learned. This has been forcibly brought out by the increase in questions concerning dictionary meanings and markings.

I sincerely hope others will try this method and will let me know how it worked for them. Even better ideas may evolve than this, and I would like to know about them.

# The Use of Slides For Biology Exams

by Donald K. Brown and  
R. E. de Kieffer

Donald K. Brown, Graduate Assistant, and R. E. de Kieffer, Director of the Bureau of Audio-Visual Instruction at the University of Colorado, Boulder, Colorado, collaborated to co-author this interesting story that originated in their Biology Department.

THE UNIVERSITY of Colorado offers a first-year course in General Biology which has one three-hour lab per week. Until recently, students were tested on the laboratory material by practical examinations which utilized microscope slides and fresh and preserved specimens.

In this type of examination, twenty-five to thirty "stations" were set up in the laboratory, each containing a representative specimen. A small white card was placed by each station, on which one or more questions were typewritten. Students were given approximately one minute at each station and then all moved in unison to the next station upon a given signal. The exam was set up at the beginning of the week and was not dismantled until all sections had taken it, at the end of the week.

This type of examination has proven to have a number of unsatisfactory features, among which are the following:

1. Labs are tied up during test week, preventing their use for experimentation and for other classes.
2. Demonstrations and microscope slides are frequently tampered with during the test, ruining the question for students subsequently passing the station.
3. Time cannot be varied for individual questions. A hardship is imposed on the students if questions are of unequal length.
4. Tension often runs high, interfering with thought processes, or causing students to get the numbers of questions mixed up.
5. Cheating is hard to prevent, as students often put penciled answers on the table tops beside the stations. Students taking the test at the end of the week tend to get better grades because they have been informed of the test questions by friends and collaborators.

A satisfactory solution to most of these problems has been found in the use of projected materials. Both microscope slides and standard 2 x 2 color slides are used, the latter being more convenient.

A number of biological supply houses sell excellent 2 x 2 slides of most organisms studied in Freshman Biology courses. However, it is much less expensive to do your own photography, and good results can be obtained with a little practice. We at the University of Colorado have made most of our own slides. Large specimens

slides. The projector in use here is the SVE Micro-Beam unit, and it has been found quite satisfactory. It consists of a set of lenses in a mount that can be slipped into the barrel of most 35 mm slide projectors. The 35 mm projector furnishes the light source, which is ample for this purpose. In fact, the light is so intense that it is necessary to have the Micro-Beam unit equipped with a heat absorbing glass to avoid overheating of the slides. The image projected by this unit is excellent quality, very sharp, and nearly free of spherical aberration.

**Projector shown in use here is the Micro-Beam which is a product of the Society for Visual Education. Unit is equipped with a heat-absorbing glass to avoid overheating of the slides.**

are photographed directly and small specimens are photographed through a microscope, with a 35 mm camera.

The slides used must meet certain basic requirements. The photography must be good enough to show all important structures clearly. The photographs must be representative; i.e. they must show the organisms and structures studied in the laboratory. Lastly, the scale must be obvious. A linear scale or some familiar object should be in every picture where any doubt can exist as to size.

We use directly-projected microscope slides as a supplement to the 2 x 2

For the lab practical, twenty-five of the best slides are selected and a master set of five or six questions per slide is compiled. Each laboratory instructor then constructs his own practical examination by selecting approximately two questions per slide from his master set.

The test is given in any suitable projection room, with the instructor standing by the screen, asking the test questions and using a pointer when necessary. The light reflected from the screen has been found to be sufficient

(Continued on page 493)

# Progress Report on the

# INTERNATIONAL TAPE EXCHANGE PROGRAM

by RUTH Y. TERRY

The International Tape Exchange Program which was inaugurated by Mrs. Ruth Y. Terry of Muskegon, Michigan, has been in progress three years, ending with October of this year. We have been happy to act as her intermediary in effecting exchanges between classes and groups in this and other countries. However, classes or groups who are interested in a tape exchange should do so by correspondence directly with each other rather than with this magazine, or should get in touch with Mrs. Terry, to facilitate arrangements.

Following is Mrs. Terry's latest report on the progress of the program.

## Canadian Schools

I appreciate the many fine responses I have received from Canadian schools and appreciate the announcement, which the *Manitoba School Journal* made in the April issue on the editorial page. We thank Mr. Pratt, Director of the Curriculum, Manitoba Department of Education for this notice. More than twenty schools in Canada have responded.

## Film User

In January 1957, the *Film User* in London announced the second time the International Tape Exchange Program, this time on the editorial page. One of the following responses came from Mr. Ceris Jones, Lectures Research Officer, stating, "I am informed that you have had very successful experience in the use of magnetic tape recorders for educational purposes. Is it possible for this country to benefit from that experience? Recorders are

now being widely introduced into schools and teachers feel the need of guidance as to how the machine can be used effectively for teaching. I should be very grateful for your advice."

Mrs. Evelyn Wickerink, Orchard View School, Muskegon, Michigan, with Dale Gibson, her Audio Visual Director, is making a tape on Michigan as part of their contribution to the International Tape Exchange. English and literature periods offer this opportunity. In the past their tapes have been exchanged with schools within the United States. Now the class is concentrating on schools abroad.

The children are well indoctrinated in this activity since the working committees include an art director, who is responsible for the bulletin board preparation, as shown in the photograph, a sound director, who manipulates the phonograph for the opening and closing music of the program, a chorus of children's voices, a commentator, and finally reporters, who give facts on Michigan.

## W. Michigan U.

The Audio-Visual Center at Western Michigan University utilized a bulletin board display of the International Tape Exchange Program where Miss Dina Pavri from India, a Supervisor of Secondary Education, saw this announcement and expressed enthusiasm about the exchanges of tapes as one way to raise the educational level of her people. Their pupils in return will tell about their country, which should offer good sources of supplementary teaching material in social science.

Bob Jaeger, our guest from Western Michigan Christian High School, explained the Fourteenth Amendment and how it operates in our country, on a tape to Tomkong English College, China. His speech has been heard by the U.S.I.A. Such material is recommended as showing our American way of life because such a talk on citizenship deals with the civil and political rights of persons in our country.

## Vienna, Austria

Dr. Richard Kogl, a superintendent of schools of Vienna, Austria, with a staff of 500 teachers and 200 of them, teachers of English, wishes to receive tapes from U.S.A. in English and send German tapes on any age level from elementary grades through the university. With the aid of Dr. Lunzer, an English interpreter and lecturer at the University of Vienna, this plan could be consummated. I have had personal contact with these two persons during their stay in the United States, and also had the very fine privilege to record both the German and English of these individuals. They speak distinct Americanized English.

The four exchange students Agi Hemmer, Germany; Anna Thorwall, Finland; Nancy Clink, U.S.A. (exchange student to Germany last year); and John Mandelbaum, France, were our guests several times and told us about their school systems, cultures, their ways of life and so forth. These young people heartily endorse the International Tape Exchange Program as an excellent means of keeping informed about other people in other lands. They have inspired my pupils and have been glad to make tapes so we can share their knowledge of their homelands with other correspondents of ours.

## Guntur, India

Mr. N. S. Murte of Guntur, India writes direct from his country that he is very happy to participate in the International Tape Exchange Program. He wishes to exchange tapes in shorthand. "I will appreciate very much if you will kindly put me in touch with American Secretarial Schools that give shorthand and typewriting tuition via tape recorder so that we can exchange tapes with schools in your country." So he sends three names for exchange with a very careful explanation in hundreds of words of the qualifications of these schools and their instructors. He writes of other languages spoken in India. However, English is the co-official language and this kind of exchange apparently offers no language barrier.

## Melbourne, Australia

Mr. Floyd L. Smith of the Woodruff School at Ypsilanti, Michigan reports on an exchange with the Northcote High School of Melbourne, Victoria, Australia. Both teachers and pupils corresponded to initiate the program. The sixth graders are utilizing the tape received as a part of their geography study of Australia. More about this later.

How about more response about your participation from the school at New Hartford, Connecticut? We would like to have some photographs and a short resume of your activities in the International Tape Exchange Program.

Following are names and addresses of persons in other countries interested in exchanging tape recordings with classes and groups in the United States. If you are interested, write directly to the name and address given to make arrangements. Give the age level of your class or group. Give mechanical details about your tape recorder, suggest the purpose and content of the tape messages, offer to send the first recording — and then follow through promptly when the exchange has been agreed to.

## WARNINGS

- (1) Don't delay replies too long.
- (2) Don't overlook the fact that mail regulations are constantly changing. Always confer with your post office. (Inquire about the gift restrictions on tapes for certain countries.)
- (3) Don't forget to insure tapes for safer delivery. It may be necessary to send tapes parcel post to use international mail insurance.
- (4) Don't send photographs, school handbooks, printed materials, or any other item in the package with the tape recording.
- (5) Don't overlook asking in your correspondence if there are duties or customs fees on tapes coming from the United States.

Please send stories and photographs of your tape recording exchanges to:

Ruth Y. Terry  
834 Ruddiman Drive  
North Muskegon, Michigan

# SOUND advice

about audio materials  
 and equipment

by **MAX U. BILDERSEE**

"The air, and not the page, is the natural climate of poetry. Laid away and petrified in books, poetry chokes or dies away. Its destiny is not the lot of stuffed birds. Recordings serve it well."

— Gabriela Mistral

Poetry is music with its own forms and values. It cannot be measured by the same standards by which prose is evaluated — nor can it be understood fully without ear participation. The recording director has a tremendous opportunity — and at the same time an equally stupendous challenge — to free poetry from the bondage of words and translate it into sound, free and in new forms, for purely aural comprehension. This challenge is being approached and will be met and we listeners will profit by the opportunity to hear poetic words as they were meant to be delivered. A leader in this practical and intellectual endeavor is David Allen whose reading has been recorded under the "POETRY RECORDS" label.

His "SIXTEEN SONNETS OF WILLIAM SHAKESPEARE" (Poetry Records PR 201) is evidence of this application of beauty of delivery to sounds recorded in words. His reading is embellished by appropriate harp music composed particularly for this purpose by Curtis Biever and per-

formed by Margaret Ross. The mood of the poem, mirrored in the musical accompaniment, is underscored by the reading.

Although Shakespeare left the world little evidence of his personal life, his craftsmanship was sufficient that he is considered to be one of the if not the greatest single figure in English letters. His plays give him a standing achieved by no one else and his sonnets add to his stature.

One can disagree with the order in which the selected sonnets are delivered, and indeed with the editorial decision of which to reproduce, but the imagination of delivery and direction leaves little to be desired. Included in the collection are "When I Consider Everything That Grows" (Number XV), "My Mistress Eyes Are Nothing Like The Sun" (Number CXXX), "Shall I Compare Thee To A Summer's Day" (Number XVIII) and "How Heavy Do I Journey on the Way" (Number L). These and several others are known to many high school and college students. Certainly, without question, the college major in English must be intimate with each of these works of beauty, and many more mature high school students can profit from the experience of hearing and reading these magnificent works. The

**Audio Education, Inc.**

55 FIFTH AVENUE

NEW YORK 3, NEW YORK

recording under discussion will be a valuable addition to the collections of both libraries and English Departments in secondary institutions.

It has long been the lot of poets to be recognized for their artistry only by succeeding generations. Many have labored under the most difficult circumstances and have achieved too limited circulation among their contemporaries. Such is not the case with Elias Lieberman who, as a child, came to American shores from his native Russia late in the nineteenth century. Trained in American schools, Dr. Lieberman achieved dual fame as an outstanding educator and as a student of the American literary scene. Starting as a classroom teacher in the New York City schools upon his graduation from college, Dr. Lieberman rose to the post of Associate Superintendent in New York City's tremendous educational establishment.

Early in his career Elias Lieberman began expressing his impressions of America in poetry. His first book, "Paved Streets" was published in 1918, but before that he was hailed as his "I AM AN AMERICAN" was read in the House of Representatives in 1917 and was made part of the Congressional Record.

In 1953 Dr. Lieberman recorded twenty-eight of his poems for release in the Contemporary Poetry Series published by The Spoken Words. This disc "ELIAS LIEBERMAN" (The Spoken Word—SW 105) contains, in addition to "I Am an American" such well known poems as "To My Brothers Everywhere," "Credo," "The American Way," "The Woman With a Broom," "Victory," "A Teacher Speaks," "Mercurio Sees the Town," "An Abandoned Tow Path," "Weeds" and many other selected examples of Dr. Lieberman's work.

High school students have much to profit from reading Elias Lieberman's work and from hearing his own interpretation of his words. Elias Lieberman is a capable reader and his poetry profits from his own delivery. Certainly college and high school library collections should have this recording on their shelves where it can be selected for hearing and close study.

POET'S GOLD (RCA-Victor ERA 269) is a splendid rendition by David Ross of Keats' "La Belle Dame Sans Merci," Emily Dickinson's "Success Is Counted Sweetest" and "Hope Is the Thing With Feathers," Matthew Arnold's "Dover Beach," Decker's "Sweet Content," Hood's "I Remember," Burns' "A Red, Red Rose" and that perennial favorite, "Annabel Lee" by Edgar Allan Poe. This, too, is beautifully read and is worthy of adding

to school and college collections. Mr. Ross needs no introduction to the many thousands of listeners who have enjoyed his readings of poetry on radio. He has expressed our belief in the inherent music of poetry, saying, "A poem should be heard. To speak it aloud is to liberate it from the page. It is an act of deliverance. Since a poem has an auditory life, a body of musical sounds, we should not be content to settle for its silence. I am reminded of the caged bird: we have but to free it, to observe the full range of its flight. So with the poem. Speak it aloud and we release its essential music."

Two of childhood's great heroes are with us on records and deserve introduction in the intermediate grades. The ten to twelve year olds will particularly enjoy "THE STORY OF PAUL BUNYAN" (RCA-Victor WBY-1). Although intended as an entertainment record, this disc can well be used for an introduction to this phase of American Literature. Combined with "Paul Bunyan and the Howlin' River" (from the Album "The Sky's the Limit—Audio Education LL-1) the teacher has an ideal pair to present the fictional character and the beginnings of American Folklore. The RCA-Victor recording presents excerpts from several folk songs ably sung by Murray Phillips as an introduction to some of the spectacular feats performed by the legendary giant of America. His services to the farmer, to the woodman and to our whole transportation system (after all, he scooped out the Great Lakes and dug the Erie Canal) are summarized on this disc.

But Davy Crockett was a real person, frontiersman, Indian fighter, soldier, hunter, Congressman and author. The recording, delivered in the first person by Bill Hayes, is adapted from the recently published, "Davy Crockett's Own Story." The volume, and therefore the recording, are taken from three original sources: "A Narrative of the Life of Davy Crockett" (1834), "An Account of Colonel Crockett's Tour to the North and Down East" (1834), and

"Colonel Crockett's Exploits and Adventures in Texas" (1836) all of which were written by the frontiersman himself. The real Davy Crockett, despite limited schooling, distinguished himself as a hunter, a hero and a representative of his constituents in Congress. This is all summarized in a worthwhile "folksy" first person recording titled "THE REAL DAVY CROCKETT" (Folkways Records—FP 205) which can be an effective teaching tool in classes studying American History, particularly the early nineteenth century up to and including the famous fearsome Battle of the Alamo.

The same groups of pre-teen and early teen-age youngsters can secure a picture of colonial America and its customs as pictured in the folk-songs of the time, sung by Bill and Gene Bonyun on the disc "YANKEE LEG-END" (Heirloom HL 500). The disc contains some well known songs such as "Yankee Doodle," "Jenny Jenkins," "Riflemen of Bennington" and "Blow the Man Down." Many other less well known folk songs of the period are sung by this talented folksinger. Certainly this record, or parts of it, can help develop an appreciation of the atmosphere of the late eighteenth century in New England and give students an understanding of the problems and hardships of the founders of America.

Finally, "THE TARRIERS" (Glory Records PG 1200) is a collection of folk songs presented in an interesting but rather commercial manner. No question can be raised concerning the popularity of the style of delivery but such work songs as "Drill, Ye Tarriers, Drill" and "The Banana Boat Song" should be delivered in a slower, more easy-going tempo so that natural work movements will not be overly accelerated. After listening to "Drill, Ye Tarriers" as presented in this disk we went back to Bill Bonyun's delivery of the same folksong (WHO BUILT AMERICA, Folkways, Album 2) and found it easier to move naturally and easily in a work rhythm while listening to the older recording. However, the adaptation of folksongs to modern delivery is distinctly a part of the present scene and these two recordings can be compared in class as a motivating and instructional device. After hearing both, students can be asked to study the lists of popular songs and prepare a collection of folk music which has been adapted to modern rhythms of modern delivery.

## FROM TEN TO TWELVE

(The McGraw-Hill Text-Film Department, McGraw-Hill Book Company, Inc., 330 West 42nd Street, New York 36, New York) 30 minutes, 16mm, sound, black and white, 1957. Produced by Crawley Films, Ottawa, Canada.

### DESCRIPTION

The fourth release in the "Ages and Stages" series, this film shows some of the characteristics of ten- to twelve-year-old behavior and points out that by observing the children shown in this film, adults may be helped in their understanding of guidance of this age group.

Opening scenes show ten-year-old Bob Jones, his eleven-year-old brother, Fred, and their gang in after-school play in the yard of the Jones family. The film points out common characteristics, such as being noisy and messy in appearance and gathering together in a loosely knit gang, as well as illustrates differences in physical development and personality traits. When Bill, a twelve-year-old, and Rod, a thirteen-year-old, join the group, more mature characteristics of the two older boys are described.

Shifting to an upstairs room in which twelve-year-old Betty and her friends have congregated, the film treats generalized characteristics and individual differences of these girls—some unsophisticated while others have a more mature, teenage outlook. The film also points out that these girls are sensitive to and aware of human relations with adults, such as parents and teachers. Contrasts are made between the poise in social situations of ten- to twelve-year-old boys and girls when Mrs. Jones offers both groups of children some homemade cookies.

When Mrs. Jones calls her children in for evening chores, homework, and preparation for the evening meal, the film centers its attention on the Jones family. Typical home scenes show Mr. Jones handling Betty's prolonged telephone call, sharing Fred's interest in the sports page of the evening paper, and helping to make the evening meal a pleasant occasion.

The film then pictures the events of the following morning when a problem arises involving Fred who complains of a stomach-ache. Betty who accuses him of pretending illness because of his difficulties the previous day in football practice, and Bob who "sticks up" for Fred. After Betty and Bob leave for school, Mrs. Jones tries to question Fred about the "football incident" but seeing his emotional reactions she decides to leave the matter until evening and to Mr. Jones.

Scenes then shift to Bob's classroom. Here some characteristics of ten-year-olds are pointed out as the teacher calls one youngster back from his daydreams and reprimands Bob and a friend, who have been tattled on by a girl, for a mischievous act. The narrator points out the typicalness of the girl's tattling and the boys "taking" their punishment.

In the evening, scenes in the Jones home show Mr. Jones encouraging Fred to give his version of the "football incident," speaking friendly but frankly of Fred's mistake in the situation, and preparing the boy for the possibility of his being dropped from the team.

As the narrator points out that the family may never find out about some incidents, the camera picks up Bob and his going as they enter a house that is being constructed and damage an electrical outlet. Entering the Jones' kitchen, the boys, upon being questioned by Mrs. Jones as to what they've been doing, give the usual, elusive answer, "nothing." Then, in a montage of scenes the film suggests several ways parents can help to prevent destructive pranks: doing interesting things with them as well as for them; sharing some things as a family group; providing group activities with their peers; gradually increasing the amount of personal freedom; and showing a

sense of humor.

The concluding scenes of the Jones family center around Betty's giving a Halloween party — the argument that arises between Betty and her mother as to the time the party should end; the entire family helping her decorate the house; the arrival of the girls in a group followed very shortly by the boys; the way Betty gets the group dancing; and the unobtrusive yet watchful role of her parents. As Betty's friends are pictured leaving the party, the narrator restates some of the characteristics that have been observed in ten- to twelve-year-olds and emphasizes the importance of understanding children in this age group as preparation for understanding them in the teenage years.

#### APPRAISAL

This film presents, in an interesting and natural manner, situations likely to occur in the daily life of ten- to twelve-year-old boys and girls and the interspersing of dialog with the narrator's remarks adds to the feeling that the viewer is seeing real people in everyday life situations. Both parents and teachers will see a number of incidents that will remind them of their own experiences with this age group. Used with groups of parents, the film should open the way for an informative discussion about the means of living with and working out home and family problems as numerous examples are presented that show parental understanding and guidance, such as the handling of the football incident with Fred. Mother-Father cooperation is seen in the action of Mr. Jones as he upholds his wife's decision that 10:30 is the closing hour of Betty's Halloween party. In more direct fashion, the film enumerates several things families can do to help prevent destructive activities, such as the prank of Bob and his friends in the partially constructed house. In child study courses for prospective teachers and homemakers, the film will be useful to point out common characteristics and individual physical and personality differences in ten- to twelve-year-olds and will serve as a basis for comments and suggestions of ways in which the school and home can cooperate in helping these boys and girls to grow up.

— Beryl B. Blain

### THE NAPOLEONIC ERA

(Coronet Instructional Films, Coronet Building, Chicago 1, Illinois) 14 minutes, 16mm, sound, color or black and white, 1957. \$125 or \$68.75. Teacher's Guide available.

#### DESCRIPTION

*The Napoleonic Era* uses paintings and live-action photography to trace the key events in the building of the Grand French Empire and in its downfall climaxed by the Battle of Waterloo in 1815.

Frédéric Gautier, a former officer in Napoleon's army, visits an art museum and recalls famous events of the period between 1795 and 1815 as he views their interpretation on canvas. In addition to depicting scenes by such artists as Jacques Louis David, Jean Meissonier, Francois Gerard, Antoine Vernet, and Baron Gros, the film shows many views of actual spots where action took place. In several instances, action is repeated through narrative dramatization.

Animated maps are used to show the growth of the Grand French Empire under the leadership of General Bonaparte. Highlights of Napoleon's political life and conquests are outlined in the film, beginning with the insurrection of 1795 during the French Revolution and concluding with his defeat at Waterloo.

The film shows how the young general was given command of the Army of Italy as a reward for putting down an uprising against the Republic and how he was made master of the French Republic after a successful *coup d'état*. As First Consul, Napoleon restored public order, collected taxes, and re-established the government's credit. The young leader instituted many reforms such as organizing the laws of the land into a uniform code, unifying the school system, and restoring religious peace between France and the Papacy.

In the Cathedral of Notre Dame, Napoleon crowned himself Emperor of France on December 2, 1814. His goal became the fusion of all the nations under France and he set out to add more conquests to the many countries already dominated by the French. The high point of Napoleon's power came when he met and defeated Emperor Alexander of Russia. In the Treaty of Tilsit, it was agreed that Europe be divided between France and Russia with France receiving all of Europe west of a line starting at the Niemen River.

On an animated map, a new problem for Napoleon and the French is illustrated. The English fleet was destroying France's sea trade. In retaliation, Napoleon closed the continent to England by a counter blockade, the "Continental System." Instead of making the continent independent of England and her colonies, the supply of imported goods diminished, many businessmen were forced to close their

stores, and the popularity of the French government fell.

One by one the conquered countries began open opposition until, in 1812, the Grand Army of France marched into Russia and was forced to retreat. The narration explains that the empire began to disintegrate and the nations of Europe united to defeat Napoleon at the Battle of the Nations in Leipzig. Napoleon abdicated and the empire was ended except for a brief attempt to return to power, but after Waterloo, his dictatorship ended forever.

The film points out that even though the Napoleonic Era ended, many of the reforms instituted by Napoleon still prevail.

#### APPRAISAL

*The Napoleonic Era* makes an effective use of paintings, maps, and live-action photography to dramatize two decades in history as seen through the eyes of an officer who served under Napoleon. Comparisons of Napoleon's political and military tactics with those of leaders of other historical periods are stimulated and Napoleon's influence on present-day France provides material for discussion. Students from junior high through college should find this film helpful in understanding the chronology and importance of the Napoleonic Era. Although several of the more romantic episodes in Napoleon's life such as his exile to Elba were not mentioned, careful selection of the events in the historical sequence of this twenty-year period contributes to the effectiveness of the film. The fact that Napoleon is always represented through paintings contributes much to the illusion of realism initiated by the use of the "eye-witness" technique.

— O. E. Bismeyer, Jr.

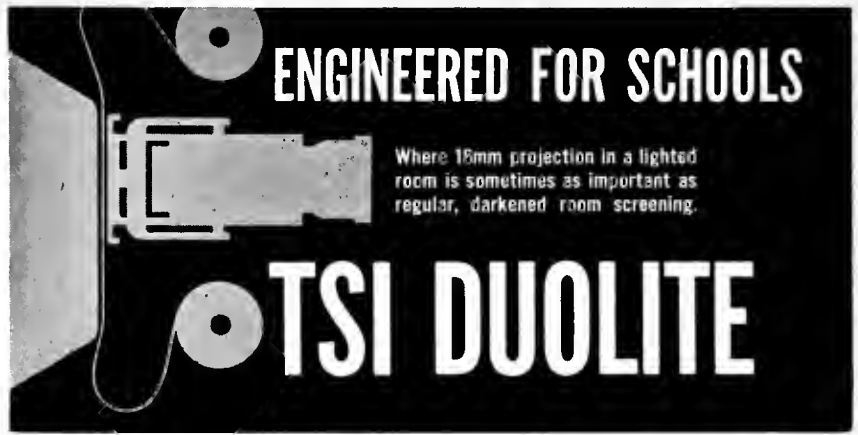

#### OUR CHANGING FAMILY LIFE

(Text-Film Department, McGraw-Hill Book Company, 330 West 42 Street, New York 36, New York) 20 minutes, 16mm, sound, black and white, 1957. \$125. Produced by Knickerbocker Productions.

#### DESCRIPTION

As one of a series of films that is correlated with the textbook *Sociology*, by Arnold W. Green, this film traces the changing character of the family, the altered role and status of its members, and the economic and social forces that have exerted a pronounced impact upon family life.

The film describes rural family living during the last decade of the 19th century and then depicts the changes that have occurred during the

AVIS FILMS

P. O. Box 645 Burbank, California

succeeding 75 years. Opening scenes portray the crucial role of the father as a farmer who is the sole source of economic support of his family, the undisputed head of the household, and the teacher of his son in the skills of farming. According to a clear division of labor, mother and grandmother are shown performing the necessary household duties of preparing the food, tending the youngsters, and generally fulfilling household responsibilities. The older children, Rosemary and her brother Franklin, assist their parents by also working in the home and on the farm. To complete the family circle, grandfather, while he is 70 years of age, still performs the useful function of caring for the livestock. Thus, through the division of labor, the existence of the family as an economic unit is maintained.

The unity of the family is further illustrated in the leisure-time pursuits of the members. On Sunday the family listens to father as he reads from the Scriptures or visits as a group with friends. A series of scenes reveals how evenings become the occasion for games in which all generations participate, more serious learning on the part of the young, as well as courting within the circle of approved family activities. The intimacy and the unity of the final scene epitomizes the integrity and the closely knit character, economically and emotionally, of the American farm family of the 1880's.

The film then discusses a number of key forces and events that gradually undermine the economic unity of the family and radically alter the roles of family members. The emergence of factory employment, the growth of cities, new developments in communication and transportation, the stock market crash and the economic depression of the 1930's, and finally, World War II are seen to weaken traditional family ties by permitting more individualistic pursuit of interests and aspirations. In the case of women,

particularly, growing opportunities for employment outside the home along with vast increases in available goods and services facilitate marked changes in their status and role in the family. Today the family is seen in its smallest unit, and, in view of the increasing divorce rate, appears destined for further disintegration.

The next sequence of scenes shows how farm machines and household appliances have so increased productivity as to enable the children to devote more time to school and to make less significant the work of older members. Leisure pursuits become more divorced from other family activities. Similar changes are shown to occur in an urban setting where a grandfather, a widower and retired, is "old" when he reaches 60 years of age. The behavior of family members in the next generation is typified by his daughter, Mrs. Norton, and her husband. Mrs. Norton is observed relieving the "baby sitter" when she arrives home. When father returns from work, he occupies the youngsters while mother prepares dinner, and then becomes "baby sitter" for the evening while mother attends her art class. Hence, roles of father and mother appear less distinct — the early division of labor is greatly modified as each member includes in his area of responsibilities some of the roles of the other.

Closing scenes emphasize the psychological importance of marriage. As the social and economic forces effect gross changes in the character and function of the family, modern urban living is seen to make marriage more desirable to accommodate the need for intimacy and companionship. While these changes in the family are great, however, the film observes that the family as an institution will continue to flourish as long as it is performing the essential functions of reproduction and care and socialization of the young.

## APPRAISAL

The outstanding character of this film lies in the vast sweep that it manifests in tracing the changing patterns in family living during the past 75 years as well as in the various details and marked distinctions that are portrayed in the evolving pattern of family living. The film may be used in a variety of ways: (1) to show how the early division of labor provided for the continuation of the family as a unit, encompassing both work as well as recreation; (2) to contrast early and modern patterns of family life with special emphasis upon the growing freedom of the individual members in today's family; and (3) to

28 MINUTES

portray how contemporary roles of the husband and wife are becoming more similar and reciprocal. The film does admirably in attempting to encompass a subject of such historic dimensions and social psychological complexity. In spite of this complexity, however, continuity is maintained through effective visual transitions as well as a commentary that alternates in tone between sympathy and reflective and analytical objectivity. Only on occasion do character portrayals, lacking somewhat in sincerity and spontaneity, mar the smooth flow and unity of the film presentation.

The primary audience for this film would be college students in introductory courses in sociology and social psychology. High school classes in social studies and home economics studying the changing nature and function of the family in contemporary times will also find this film helpful. In addition, adult groups such as PTA and church organizations who are concerned with child development, deviant behavior of young adults in the community, marriage problems, and problems of the aged, would likewise regard this film as both stimulating and informative for the film touches upon a crucial area in human affairs at a time when all

social beings must contend with an increasingly unstable and less directive environment.

## THAILAND, LAND OF RICE

(Encyclopaedia Britannica Films, 1150 Wilmette Avenue, Wilmette, Illinois) 14 minutes, 16mm, sound, color or black and white, 1957. \$125 or \$62.50. Teacher's Guide available.

### DESCRIPTION

This film presents scenes of city life in Bangkok, rice farming in the Chao Praya River valley, and commerce in Thailand.

Map animation and view of Thailand described through narration tell much of the struggle by the people of the oldest free nation of Southeast Asia. One segment of the film shows the Sonthikanok family as daily chores are performed in the rice paddy, a meal is eaten, and the harvested rice is taken down the klong or canal to the market place.

One first views the location of Thailand on a map and learns that Thailand which means land of the free was once called Siam. The ancient royal palace is contrasted with modern government buildings and broad boulevards reconstructed to conform to the demands of modern transporta-

tion. Even though the automobile is much in evidence, the trisha is still popular.

The Great Standing Buddha is pictured and the narrator explains that all men of Thailand are supposed to serve as monks for part of their life and spend this time dressed in saffron robes begging for food. The great demons are depicted guarding the massive buddhist temples.

Views along the klongs which empty into the river reveal many aspects of river commerce where entire families live on boats and ply their trade. The film points out that the majority of Thai people live in small farm communities along klongs which carry the river water to their rice fields. Houses built on stilts of teakwood are shown lining the bodies of water as a protection against the water which overflows the banks between March and October.

When the Sonthikanok family is visited, examples of planting rice, caring for the paddy, harvesting the crop, and delivering the rice to rice merchants are given. At the mill, the rice is graded, packed for export, and conveyed to boats called lighters which take the rice to the big ships in the harbor.

The narrator concludes by stating that, "Respectful of their own traditions and faithful to the ideas of their

FILM ASSOCIATES OF CALIFORNIA

10521 SANTA MONICA BLVD. LOS ANGELES 26, CALIF.

ancestors, the modern Thai are working hard to affirm and maintain their proud position as the oldest free nation of Southeast Asia."

### APPRAISAL

*Thailand, the Land of Rice* presents a compact and interesting picture of the struggle of the Thai people for economic independence and stability. Intermediate through high school audiences should benefit from much of the material offered in this film. Because of the political interest in Southeast Asia today, the upper grades might well use this film to discuss the role of Thailand in world affairs. The contrasting views of the religious, commercial, and family life of Thailand create an atmosphere of industry and contentment. The use of a typical Thai family takes advantage of involving the viewer in a comparison with his own way of life and that of another people. Enough of the old and new is blended to offer an insight into the culture of Thailand and to encourage further exploration into the countries of Southeast Asia.

— O. E. Bissmeyer, Jr.

### MEANING IN CHILD ART

(Pennsylvania State University, University Park, Pennsylvania) 11 minutes, 16mm. sound, color, 1955. \$100.

### DESCRIPTION

Produced in the Pennsylvania State University's College of Education, the film shows children in creative art classes working under the supervision of student teachers and faculty members. Each child's work is studied, evaluated, and conclusions are drawn.

The first sequence shows the work of children under five years of age. Even though each child's work is different, there are common characteristics at each age level. The narrator explains that a young child's home is his world, and he often depicts it in his paintings and drawings. Favorite toys, pets, friends, and other meaningful things are chosen as his subjects. Samples of several children's work are shown and interpreted.

The children in the art class are free to move about from place to place. One scene shows some children seated on the floor painting with long sweeping brush strokes, while in another one sees a little girl concentrating on her work. Other children of the group are shown in outdoor scenes as they sketch from nature. The narration explains that children's drawings which appear to adults as mere scribbles have real meaning to the young artists who will identify the objects

whenever grown-ups ask for an explanation.

The next portion of the film shows how children may be encouraged to take part in creative expression by having a variety of art materials placed at their disposal. One boy uses bits of cloth, scissors, and paste to construct a picture of his own choosing. A student teacher and his pupils are shown on a field trip where they enjoy watching the animals on a farm. Upon returning to the classroom, the children express their emotions through drawings and paintings. The young children draw pictures of baby lambs while the older boys and girls choose more difficult subjects. One boy draws a horse, a barn, and a hill in perspective. The narrator's interpretation is that this child has reached the stage where spatial relations are meaningful to him.

The children's art expressions are not limited to painting and drawing. One group of youngsters makes models; a girl is shown working on a piece of wood sculpture, and a boy makes linoleum block prints. Another group of children engages in clay sculpture—an activity in which no tools are used and in which the mind, eyes, hands, and emotions work together as a unit. The narrator states that the student teachers and faculty come together periodically to discuss and evaluate the children's work.

The last sequence shows the children at work on a group project—planning, designing, and making costumes for a puppet show with which the film ends.

### APPRAISAL

The film should be of interest to art teachers and supervisors who work with children in the primary and middle-elementary grades. It shows and interprets a number of experiences which are common among children as they participate in creative art. Experienced teachers offer helpful suggestions and make meaningful interpretations as they study and evaluate the children's creative expressions. The purpose of the film—to show what art, as a medium of creative expression, does for the child rather than what he is expected to get from it—is well achieved and should serve the interests and needs of art teachers and supervisors.

— Pearl Walker Headd

**Closed-Circuit T-V is fully explained by Philip Lewis on pages 472-477. Don't fail to read this revealing article.**

(Continued from page 480)

illumination for writing the answers on the answer sheets.

This projection testing technique has been found to have the following advantages over the older type, where actual materials are used:

1. Tension is much reduced. Most students prefer it over the older type practical.
2. Time per question can be varied as needed. It is easy to tell when the students are ready for the next question.
3. The slides are not tampered with, as was the case with the actual material.
4. Cheating is practically eliminated, especially if the students sit in alternate seats. Because each instructor uses slightly different questions, students taking the test late in the week have a harder time finding out what is in the test.
5. Flexibility and ease of administering the test are much greater. This is important in a crowded laboratory situation.
6. Laboratory space is not tied up. The labs can be used for experiments and for other classes during the test week. (The examination does not take up nearly all of the three-hour lab period.)
7. Learning is increased in this type of test because students usually have not seen the same specimens before. Therefore, they must learn the characters of the species rather than the incidental appearance of any one individual specimen.

Results of this projection testing technique have been sufficiently good to warrant its retention here at the University of Colorado. With an ever-growing slide file, it should improve each year.

# Church department

by WILLIAM S. HOCKMAN

## Film Economics

What's the state of film business in the church field? We hear conflicting reports. Some producers say it is "fine," and others say it is "not so good." One concern writes us about the "progressive decline in gross income from rentals" sending along data to spell out what they mean. This concern wants to know if total usage in the church field has declined or increased. Could it be that they are just not getting their share of the total business?

The proprietor of an A-V business writes: "Just got our annual report back, and our accountant tells us that the film rental of our business went in the red again this year." Another observes "about ten years ago we added films and filmstrips to our business. Frankly, I must say that it has never paid." "Religious films keep us busy and keep us broke," writes an owner who goes on to observe "that if things don't improve soon, we will be seriously considering getting out of the religious film business."

From another production "authority" we learn that "production costs have tripled and quadrupled in the last fifteen years. The main reason is labor costs—and labor is the largest single item in the production of pictures." In line with this another producer-distributor comments: "My personal opinion is that production costs are not too high. . . . The rental problem is a serious one (and) I have a feeling that in the next several years some answers will be found."

A library owner thinks some way should be found "to recoup the cost of the print a little faster," suggesting that higher rentals might be the solution. After explaining why production costs are up, a producer-distributor concludes: "Increased demand has not been sufficient to offset the increased cost." A person with considerable bystander status observes, "A cure to most of the ills can be summed up in two little words—MORE RENTALS."

While we could go on quoting for another column, the last comment above gives us a text for a paragraph

or two on what we think ails film economics in the church field.

Without doubt total film usage by the churches is down. If not down in an absolute sense, it is down in a relative one. In relation to church-owned projectors and the volume of high-quality films for church use, it is certainly below what it ought to be. And why is this?

The churches have the equipment. Good films are plentiful, at reasonable rentals. The A-V movement is now in the middle of its Second Decade, and in that time we should have gathered some experience. No longer can we plead lack of films, or equipment, or know-how.

But, what about know-how? Who has pollinated the church field with utilization ideas and useful techniques? Ten years ago we thought the appropriate department of the National Council of Churches would do the job. While doing some things well on a shrinking budget and a decreasing staff, it did *not* get this job done. Nor did the denominations, taken as a whole, do very much either to seed the church field with utilization ideas and know-how. And the same for state and local councils of churches, who might have been guided and inspired by the NCC if it had assigned strong personnel to the task.

The record of the producers is much better. Lending personnel for workshops, conferences, seminars, institutes and other A-V activities, they did pollinate the church field—but it was scattered and thin due to the magnitude of the job. They paid for national advertising, produced and distributed utilization guides, supplied the local film library with useful promotional materials and laid out considerable funds to improve and extend film usage. Despite these efforts the film-usage crop is not what it ought to be—for the sake of the Kingdom (the main concern of the church), and also for the sake of sound and healthy economics.

Where do we go from here? What is to be done? It seems to us that the sensible thing to do now is to do

what we have left undone—cultivate and fertilize and pollinate the church field with utilization ideas and know-how.

And who is to do the job? The producer, the film library, the magazines, but principally THE CHURCH—and, not chiefly to get us out of this economic Sargossa Sea, but wholly that such a powerful means of communication shall be used for the glory of God.—WSH.

## Seminary Training

### In Audio-Visual Aids

By Joe Davis Heacock\*

The traditional reasons why audio-visuals are not used in churches and schools are practically eliminated. There is no longer a lack of money; materials are adequate, and new buildings are being constructed to provide for audio-visuals. The one problem remaining in churches and schools is the attitude of the teacher. This problem stems from ignorance, which could be corrected to a large degree by better church and school administration.

Neither pastors, ministers of education, music directors, youth or elementary directors, nor missionaries will use visual materials until they grasp the possibilities and obtain some know-how in making the visuals effective.

### Using, Teaches

Perhaps the best way to help potential church and denominational leaders to grasp the possibilities in audio-visuals is for the teachers in the colleges and seminaries to use audio-visuals in teaching. Unfortunately, we face the age-old conflict between content and method.

Seminary teachers are usually far more concerned with the content in their course than they are with their effectiveness in putting the course over. Teachers get the idea somehow that

\*Dr. Heacock is Director of the School of Religious Education, Southwestern Baptist Theological Seminary, Fort Worth, Texas. His observations are reprinted from the bulletin, "Audio-Visual Aids" for July, 1957.

they are shirking their responsibility if they use a film rather than "tell 'um," that someone will think they are lazy or not prepared. It has been difficult for teachers to admit a good visual can be more effective than "I" could do it with a lecture. The fact is — the military services, secular education, and even tests in Bible teaching have proven visual presentations are usually more effective.

### Teacher, Primary

The teacher is still primary, of course. Jesus used the visual, but the power of His life and personality was the more important. The knowledge and personality of the college and seminary teacher are still predominant. Yet, using a projector does not minimize the place of the teacher, but rather exalts it.

Teachers are human beings after all, and require the same organization and motivation to cause them to perform in a desired way. Therefore, teachers are more likely to use visual materials if there is some organized effort to encourage it. That brings us again to the problem of administration.

There is the need for a director of audio-visual aids on the campus. It would be best for this director to have a committee. The campus committee would make available to every teacher a classified list of all visual materials on the campus and in the Book Store.

### Two Suggestions

Two suggestions can be made. One is that in future building programs on any seminary campus, the planning committee should include one or more persons who can advise and guide in making provision for essential audio-visual facilities. This would include electric wall outlets, speaker jacks, conduits to provide two-way projection, light switches, and permanent wall screens.

Along with audio-visual facilities, a seminary should also provide adequate courses for students interested in the field of audio-visuals. Repeated requests come from the mission fields encouraging mission volunteers to take such courses. Many missionaries on furlough return to the seminaries and include visual aids courses in their study.

### The Story Of Betty Lou

Betty Lou's parents had little education and less money, but they had lots of character and considerable courage. With these general family assets she arrived at Mather school, in South Carolina. It knew what to do with Betty Lou. Out of 90 years of experience it had developed a formula for educating such Negro girls right up through high

school (Junior College since 1954). In the 82-frame filmstrip of live color photography, and a 20-minute LP recording, Betty Lou "tells" us of her arrival, of her work, of her study and play at Mather; and also of a serious mistake she made and its heart-warming denouement. *One Girl's Story* is highly recommended to give youth and adults a close-up view of Christian missions at work in the field of education. (From A-V Department, American Baptist Convention, 152 Madison Ave., N. Y. 16; sale complete \$10; rental \$3.50.)

### For Youth Leaders

*Winning the Confidence of Youth, Cooperation Among Adult Workers, and Toward Better Teaching* are the three parts of a new filmstrip produced by the Methodist TV Radio and Film Commission for general use. Each has close to 40 frames of B&W live photography of reasonable but not outstanding quality. The commentary, narration and dialogue, is nicely LP-recorded with a break in each band where the discussion period is inserted. Intended to be stimulative rather than definitive, this series can be used to spark a discussion which will bring these general ideas down into the specific context of a denomination or a local church situation. Recommended.

### Happy Differences

Suppose you, as a teacher of Primary or Junior children, wanted to help them realize the wide variety of differences that are in the world about us, including the differences in people! Suppose you wanted to accent the idea that differences are a part of the world that God has made for us; that they help make life exciting and interesting; and, that they are to be accepted and enjoyed! What would you do? I know one thing you wouldn't need to do—Make a filmstrip on the subject. That has already been done, with excellent results, in the 65-frame color filmstrip, *The World of Happy Differences*. Friendship Press (257 Fourth Ave., N.Y. 10) is the producer, with Hazel V. Orton originating and directing. Warren Johnson does the pictures—in a lovely cartoon style, in bright, gay and nicely balanced colors, yet with emphatic meaning. The commentary, by Mae Hurley Ashworth, is imaginative, engaging, subtly instructive, and beautifully enhanced by an original song whose stanzas sum up the thought of the preceding picture sequence. There is an excellent script-guide put up in a clever format, and the price per unit it only \$5.00. (Order direct.)

# Film Distribution Plans In The Church Field

What are the principal film distribution plans now in vogue in the church field? What are the principal business relationships between the producer and the dealer or local film rental library?

After a little investigation we find a total of eight plans or patterns. We will try to describe them, leaving value judgments for a later time. We have chosen to use the term "print" to stabilize the categorical phrases which differentiate the several modes or patterns. We have tried to avoid the sales jargon of any one producer in describing briefly the financial arrangements by which a dealer or library comes to possess and use the print (copy) of a given film. Here are the eight we know about. There may be others:

## I

### Out-Right Print Sale

Here the producer sells outright for a given price a print of a film, the buyer then having full ownership and control of the print and making no further financial returns to the producer.

## II

### Print Lease and Split-Rental, with An Option to Convert to the Print Lease Plan

Here the producer leases a print to the dealer for a set price, getting also a percentage of the rentals, with the dealer having the privilege of applying the producer's share of the rentals if he elects to convert to the Print-Lease Plan (IV below).

## III

### Print Lease and Split Rental

Here the producer leases a print to the dealer for a set price and then collects a percentage of the rentals as long as the film circulates. This is also called the "participation plan," "split-rental plan," and the "life-time lease plan."

## IV

### Print Lease Plan

Here the producer leases a print to

the dealer for a more substantial price than in III, with the ownership and control of the print remaining with the producer, but with the dealer retaining all of the rentals.

## V

### Print Deposit Plan

Here the producer places a print in the library without any cost to the library, it to be rented at fixed rates, with the library returning from 60% to 70% of each rental to the producer.

## VI

### Print Saturation Plan

Here the church, denomination, or agency produces a film and places prints in church channels to secure, through special intensive promotion, the maximum usage by the churches in a given period of time.

## VII

### Print Service Charge

Here the producer places a print with a person or concern for handling, with the user paying a service charge, and postage one way or both, with the concern keeping the entire fee or splitting it with the owner.

## VIII

### Print Offering Plan

Here the producer or owner places a print with a person or concern who then agrees to circulate the film on a voluntary offering basis.

### Comment

We understand that the bulk of business in the church field is done under Plans III and IV, with a small amount under Plans II and V, and less still under I. Regular libraries and dealers don't usually get mixed up with Plan VI, but now and then one will circulate prints under VII and VIII. — WSH.

## New, Good, and Useful

The teachers of Nursery, Kindergarten, and Primary children in church, synagogue and school will find the sound filmstrip, *Art and the Growing Child*, interesting, informative, and exceedingly useful. It can be used with teachers and parents—to help them understand the art-efforts and ideas of the growing child. It can be used with children (3rd grade and up) to stimulate, instruct, and inspire them to express themselves.

The frames of this filmstrip give us the actual candid paintings of chil-

dren and boys and girls. The well-composed LP-recorded narration has two versions, one for adults and the other for boys and girls, both beautifully narrated by Ann Loring, TV actress and teacher. The filmstrip's author is Temina Gezari, artist, sculptor, and teacher of New York. This useful filmstrip is Number One in a series of productions by Films for Education, 1066 Chapel Street, New Haven, Conn. A user's guide has been provided, and the whole production nicely boxed. Color; 58 frames; utilization time each side 13 minutes; complete for \$15.00.

## Evaluating Sheets

How good is a visual aid? In what contexts is it to be judged? Is it to be evaluated against its purpose—what it was made to say and do? Is it to be judged against theoretical standards of excellence for that medium?

Here are the ten points on which the CAVE (Catholic Audio-Visual Educators Association) evaluate films: 1) THEOLOGY—Are the teachings of faith and morals presented thoroughly? 2) PHILOSOPHY—Are all the principles of the philosophy of education used in this film fully in accord with Catholic teachings? 3) PSYCHOLOGY—Does the film in its presentation properly stimulate the senses, the intellect, emotions and will?

4) AUTHENTICITY—Is this film accurate and reliable according to known facts? 5) CURRICULUM CORRELATION—How well is the film adapted to the needs, background, and maturity level of the student? 6) ORGANIZATION—Is the unity and coherence of the film revealed in the smooth continuity from one scene to another and is the film sufficiently limited in scope? 7) TECHNICAL QUALITY—Does the technical quality of the film conform to the high standards established for instructional films?

8) UTILIZATION—To what extent does the film provide a teaching experience above and beyond that accomplished by other methods? 9) INTEREST APPEAL—Does it appeal to the interest range of the audience?

For The Most Complete Selection Of

10) DESIRABLE OUTCOMES — How well does this film aid in the development of understandings, attitudes, and habits for Christian Social Living?"

This is a realistic but rugged test. On each of these the copyrighted (1956) evaluation sheets there is provision for rating a film from 10 to 100, but we assume that few will ever score high on all points. (For fuller information write to CAVE, Box 618, Church Street, N. Y. 8.)

## World Friends

What is missionary education? How does it take place? How can parents and teachers, boards and committees — all who are concerned with the complete education of the child — be shown the nature of missionary education in home and church?

After seeing *Growing as World Friends*, a 49-frame art filmstrip in full color, I would use it. I would present it to the group, and then go through once more quite rapidly, this time stopping at the end of each age-level sequence for conversation and discussion. (On this the user's guide has many good ideas.) Another profitable use would be for teachers and leaders to do a self-evaluation based on the reasonable criteria stated or implied in this filmstrip.

Janet Smalley does the pictures and Grace Storms Tower the script, both achieving a fine level of quality in their work. (Complete, with printed script-guide, \$5.00. From Friendship Press, 257 Fourth Ave., N.Y. 10.)

## The Nishio Church

Mr. Leon V. Kofod went to Nishio, a city of 25,000 population, on the central island of Honshu, Japan, to get the lovely pictures of the little Christian church and congregation we come to know in the 70-frame color filmstrip, *From the Church at Nishio*. After he got his pictures he wrote a lively and instructive script telling us all about the formation and growth of the church, and helping us become aware of the unique task of the Christian worker among the people of Japan. On all of this the Joint Commission on Missionary Education (JCME) of the National Council of Churches (NCC) has done a good production job. This is an adult filmstrip and it should be used as the basis for discussion as well as information. The script-user's guide is full of good ideas on how to accomplish this and other objectives. Recommended. (Complete, \$5.00. Order from Friendship Press, 257 Fourth Ave., N.Y. 10.)

## Controversy Expected

It is altogether possible that Cathedral's 32-frame color filmstrip, *The Marriage at Cana*, will kick up some controversy. Arising over the way the producer has represented Jesus as conducting Himself on this occasion, this hassle will not touch the basic technical qualities of the filmstrip nor deal with the fundamental issues implicit in the visualization of Biblical stories. It will unfortunately center on a matter the producer never intended to elucidate — the drinking of wine by our Lord.

However, those who use the filmstrip as the producer intended will have little difficulty. His goals are: (1) "To see that Jesus enjoyed life

and happy times, like a wedding; (2) to realize something of the trust and the conflict between Jesus and His mother; (3) to appreciate the significance John attaches to the miracle." While only the first purpose is appropriate to children, all three are reasonable utilization outcomes for young people and adults.

On the pictorial side this filmstrip is composed of color photographs of costumed and posed actors. The commentary is available in two editions — the teaching version, written in modern speech and to be read; and, the worship version, LP-recorded. The teaching version has a column of useful notes paralleling the commentary. When used in relation to intended outcomes, recommended.

## Scratches on Film

### Irritate Audiences

Scratches are havens for dirt, and refract light improperly. On the screen, they mar the picture and may distract attention. If on the sound track, they produce offensive crackling.

Fortunately, scratches can almost always be removed — without loss of light, density, color quality, sound quality, or sharpness.

# New Filmstrips

Described and evaluated by **ROBERT CHURCH, WALTER PILDITCH, and HAROLD WARD.** Producers should send review copies of filmstrips to Robert Church, Audio-Visual Coordinator, Herman Felsenthal School, 4101 S. Calumet Ave., Chicago 15, Illinois.

## Community Helpers Series

**Long Filmstrip Service**, 7505 Fairmount Avenue, El Cerrito 8, California. Filmstrips are in color. Primary grade range. Subject area—social studies.

**THE MILKMAN** (36 Frames). Filmstrip shows the duties of the milkman as he works for the dairy. Covers the travels of milk from the farm to the dairies and finally to the stores and homes. It was easily understood by class and teaches a number of new words, some already known by the children.

**THE POSTMAN** (35 Frames). The children learned some of the duties of the men who work in the post office, as well as the men who collect and deliver the mail. It clearly showed the three main ways mail travels: by plane, boat and train. The vocabulary was very clear and understandable. The strip gave the students a better understanding of the travels of a letter before it reaches its destination.

**THE DOCTOR** (34 Frames). The principal duties of the neighborhood doctor are covered in this filmstrip. It shows how he helps people who are sick and places emphasis on the value of having frequent check-ups from the doctor. Vocabulary is on primary level and easily understood.

**THE DENTIST** (29 Frames). Emphasizes how the dentist can help us take care of our teeth so that cavities will not develop. Dentist shows how he must fill bad teeth so that the cavities will not grow larger. Filmstrip may also be effectively used with a health unit.

**CITY HELPERS** (33 Frames). The duties of several helpers are explained. Shows how men clean the streets, take care of the parks, etc. Emphasizes our duty to keep our city looking neat and clean. Color pictures are of excellent quality.

**THE BAKER** (34 Frames). Covers the functions of the baker and the services he performs for the public. Shows how bread, cakes, and cookies are made and sold.

**THE FIREMAN** (37 Frames). The danger of fire is explained in this filmstrip. The student realizes the impor-

tance of fire drills and the necessity to obey fire orders at all times. The duties of the city fireman are shown and explained.

**THE POLICEMAN** (35 Frames). The policeman shows the students how to be safe in crossing the street. His protection for the neighborhood is explained. The vocabulary is easy for the primary grades and the pictures provide situations for stimulating discussion with the class.

**THE GROCER** (32 Frames). This filmstrip shows the running of the modern grocery store and the persons who work in it. Included are the many items that can be bought there and the way they are delivered to the store. The film introduces several words used for buying and selling things in student's vocabulary.

## Single Subject Filmstrips

Visual Education Consultants, 2066 Helena Street, Madison 4, Wisconsin. Filmstrips are in black and white. Grade range and subject area as noted.

**TORNADOES:** What they are and what to do about them (Upper grades, Science or Safety Subject Area, 22 Frames). This filmstrip begins by presenting a vocabulary of terms applicable to tornadoes, then shows pictures and graphs which explain some of these terms. This strip could be used in connection with a unit on weather forecasting. Major emphasis is placed on "What to do about them," and in this respect, the filmstrip could be used for safety education.

**MONEY LESSON FOR PRIMARY GRADES** (Primary grade level, Arithmetic subject area, 22 Frames). This black and white filmstrip is designed to teach thrift as well as the various kinds of currency. The names of presidents are presented and the children enjoy seeing how pennies grow into dollars. Value of money is emphasized.

**NOTE:** We want to apologize for the error in crediting the producer of the "Far Western States" Series as reported in the September issue. The correct producer of the series was Encyclopaedia Britannica Films, Inc., 1144 Wilmette Avenue, Wilmette, Illinois.

# Colorful Photoplay Filmstrips

**\$7.50 EACH**

**Knights of the Round Table** — A set of two filmstrips. Part One, 25 frames, explains the background of the story, its theme, its significance as an early attempt to organize a league of nations and how the United Nations Security Council is the Round Table of today. Part Two, 28 frames, tells the colorful story of the great legend, based on the M-G-M photoplay. **\$7.50.**

**A Lesson in Mythology** — Explains Andromeda, the Minotaur, Iphigenia, etc., based on M-G-M's *The Living Idol*. 25 frames, color. **\$7.50.**

**The Glass Slipper** — The charming fairy tale of Cinderella, told in a new way, based on the M-G-M photoplay. 36 frames in full color. **\$7.50**

**Alexander the Great** — Biography of the first man to conquer the civilized world, based on the photoplay. Shows Alexander's effort to unite Europe and Asia, a task with which the U.N. is still faced. 55 frames. **\$7.50.**

**Adventures of Robinson Crusoe** — In full color, 50 frames, a clear pictorial guide to the Defoe classic, based on the United Artists screen version. **\$7.50**

**Richard III** — Based on Laurence Olivier's colorful screen version of Shakespeare's famous play. 48 frames. **\$7.50**

**Romeo and Juliet** — Shakespeare's great love story illustrated in color from the J. Arthur Rank production filmed on location in Verona and other Italian cities. 44 frames. **\$7.50**

**Greatest Show on Earth** — In full color, a lively pictorial guide to the circus, based on Cecil B. DeMille's Technicolor photoplay, which won the Academy Award in 1953 as the best picture of the year. 40 frames. **\$7.50**

**Hansel and Gretel** — In full color, 42 frames, the highlights of the beloved fairy tale as performed by the charming Kinemins of Michael Myerberg's screen version, released by RKO Radio Pictures. **\$7.50.**

**Ulysses** — In full color, 64 frames, a pictorial guide to the new Paramount screen version of Homer's *Odyssey*, produced in Italy. An invaluable aid to the study of the classic. **\$7.50.**

# Looking at the Literature

**TELEVISION FOR CHILDREN**, 60-page illustrated book prepared by Foundation for Character Education in cooperation with Boston University's school of education. Intended to guide producers and parents in preparing and selecting suitable child programs. Consensus, not necessarily unanimous, of ten authorities in fields of broadcasting, education and psychology, is that TV seems to have little or no measurable effect upon a child's performance in school. Free to broadcasters, educational organizations, children program sponsors, governmental agencies and special libraries, through the U. S. Office of Education and the NARTB.

**MANUAL OF PRACTICAL PROJECTION**, Robert A. Mitchell, although intended primarily for the theatre projectionist, this 450-page compilation of material which appeared originally in "International Projectionist" contains valuable reference data for the audio-visual and service specialist as well as for science teachers. International Projectionist Publishing Co., Inc., 19 W. 44th St., New York 36, \$6.00.

**AUDIO VISUAL EDUCATION**, Vol. 1 No. 1, new quarterly magazine, published by the Ministry of Education, New Delhi, India. Articles deal with AV under first and second Five Year Plan, School broadcasts, and an especially interesting ideological reflection on "The Limitations of Audio-Visual Aids" as possible inhibitors of philosophical or abstract thought. Film reviews show material drawn from Britain, Russia, Czecho-Slovakia as well as U.S.A.

**VISUAL PRINCIPLES FOR TRAINING BY TELEVISION**, effect of varying visual design on clarity of more than 100 training devices tested in U. S. Navy research, rated according to organization, figure-to-ground visibility, contrast, materials, size, detail, depth and color. 28 pages, 75 cents, Office of Technical Services PB 121931, U. S. Department of Commerce, Washington 25.

**MORE SHAKESPEARE FOR EVERYONE**, in a new volume from Pocket Books and Folger Library. The title of the new book is *OTHELLO* and it is the second in the "Folger Library General Reader's Shakespeare" series.

Edited by Louis B. Wright and Virginia Freund, respectively director and executive secretary of Washington's Folger Library, *OTHELLO* is part of the continuing plan of Pocket Books and the Folger Shakespeare Library to publish during the next few

years, a complete, new edition of Shakespeare in single-play volumes.

Later this year and during 1958, Pocket Books will publish four additional Shakespeares: *THE MERCHANT OF VENICE*, *HAMLET*, *JULIUS CAESAR* and *A MIDSUMMER NIGHT'S DREAM*, to further its aim of Shakespeare for everyone at a price everyone can pay.

**TELEVISION FACTBOOK**, published by the trade newsletter, *Televi-*

*sion Digest*, Washington, D. C., recently announced in its 25th semi-annual edition, that more than two-thirds of the world's 63 million TV sets and well over half of the world's 900 TV stations are in the United States. The 476-page publication contains information on every station in operation, including detailed data on U.S. and Canadian stations. It reveals that Iron Curtain countries fall behind the west in TV progress. Altogether 43 countries have TV.

### HELPFUL BOOKS

**AUDIO-VISUAL METHODS IN TEACHING: REVISED AND ENLARGED.** By Edgar Dale. 544 pp. Illustrated; and with 49 full-color plates. The Dryden Press, 110 West 57th St., New York 19, N. Y. 1954. \$6.25.

**THE AUDIO-VISUAL EQUIPMENT MANUAL.** By James D. Finn. Published under the general editorship of Edgar Dale. 384 pp. 1500 illustrations. The Dryden Press, 110 West 57th St., New York 19, N. Y. 1957. \$9.50.

**AUDIO-VISUAL MATERIALS: THEIR NATURE AND USE.** Revised Edition. By Walter Arno Wittich and Charles F. Schuller. 570 pp. 249 illustrations, 14 Color Plates. Horper & Brothers, 49 E. 33rd St., New York 16, N.Y. 1957. \$6.50.

**MITCHELL'S MANUAL OF PRACTICAL PROJECTION.** 450 pp. Illustrated and cross-indexed. Covers every aspect of motion picture projection. Material presented in easily understood language — not too technical, yet technically accurate. Most complete and practical handbook for projectionists ever published. International Projectionist Pub. Co., 19 West 44 Street, New York 36, N. Y. \$6.00.

**EDUCATORS GUIDE TO FREE SLIDE-FILMS.** Compiled and Edited by Mary Foley Horkheimer and John W. Diffor. Ninth Annual Edition, 1957. Educators Progress Service, Dept. AVG, Randolph, Wis. \$5.00.

**STANDARDS OF PHOTOPLAY APPRECIATION.** A Course of Study in Photoplay Appreciation, Including a Photoplay Approach to Shakespeare. By William Lewin and Alexander Fraxier. Illustrated. Educational & Recreational Guides, Inc., 10 Brainerd Road, Summit, New Jersey. \$4.75.

**TAPE RECORDERS AND TAPE RECORDING.** By Harold D. Weiler. 192 pp. Radio Magazines, Inc., P. O. Box 629, Key ES, Mineola, N. Y. 1956. \$2.95 or \$3.95 (hard cover). Written for the amateur and semi-professional tape recordist, the book gives special emphasis to the use of tape recording in education.

**AUDIO-VISUAL AIDS TO INSTRUCTION.** By Harry C. McKown and Alvin B. Roberts. 608 pp. McGraw-Hill Book Company, 330 West 42nd St., New York 36. Second Edition. \$5.50.

**EDUCATIONAL FILM GUIDE: A listing of 18,000 16mm films (many hundreds on Free Loan) in one bound volume (over 1,000 pages) and 4 annual supplements thru Spring 1957. A 1954-58 bound cumulation revised, ready in Fall 1958. Subscribers to this most complete 16mm film service available will be billed only \$15 (\$1 more for foreign). Order today from Dept. LP-AVG, The H. W. Wilson Company, 960 University Ave., NYC 52. Write for free Folder . . .**

**FILMSTRIP GUIDE: A listing of well over 9,000 35mm Filmstrips (many on Free Loan) in one bound volume and 3 annual supplements through 1957. Only \$8.50 for all 4 books (\$1 more for foreign). Order today from Dept LP-AVG, The H. W. Wilson Co., 960 University Ave., NYC 52. Write for free Folder . . .**

**EDUCATORS GUIDE TO FREE FILMS.** Compiled and Edited by Mary Foley Horkheimer and John W. Diffor. Educational Consultant, John Guy Fowlkes. 17th Annual Edition, 1957. Educators Progress Service, Dept. AVG, Randolph, Wis. \$7.00.

**EDUCATORS GUIDE TO FREE TAPES, SCRIPTS, AND TRANSCRIPTIONS.** Compiled and Edited by Walter A. Wittich, Ph.D., and Gertie Honson Halsted, M.A. Third Annual Edition, 1957. Educators Progress Service, Dept. AVG, Randolph, Wis. \$5.75.

**MANUAL OF AUDIO-VISUAL TECHNIQUES.** By Robert de Kieffer and Lee Cochran. 220 pages. 1955. Prentice-Hall, Inc., Englewood Cliffs, New Jersey. \$3.75.

**A WINDOW TO THE CHILD'S MIND — Alpark's New Educational Handbook by Dorothy R. Luke, 268 pp. The first authentic analysis of Helen Parkhurst's recorded interviews with children. An indispensable guide for teachers. 1955 Starbridge Publications, P.O. Box 574 Grand Central Station, New York 17, N.Y. \$3.50.**

# Audio-visual trade review

by ROBERT E. SCHREIBER

**NEW EQUIPMENT**

For more information about any of the equipment announced here, use the Readers' Service Coupon on page 509.

**PROJECTION EQUIPMENT**

**Bell & Howell Monterey Deluxe 8mm Projector.** \$99.95. The new 253AR has reverse and still picture projection; also features 500-watt illumination, 400-foot film capacity, f: 1.6 lens, aluminum construction.

For more information circle 102 on coupon

**Eastman Cine-Kodak Showtime 8mm Projector** \$129.50 for variable speed model; \$115 for standard. The variable speed model can also be reversed or stopped for single frame showing. Shutter transmits 60% more light, said to give 750-watt illumination with 500-watt lamp. Fast f:1.6 lens. Built into case. Never needs oiling. Nylon gears.

For more information circle 116 on coupon

**Genarco 3,000 Watt Slide Projector** \$960. Now available with 70-slide, push-button, remote control slide changer.

For more information circle 103 on coupon

**Oakton Robovision Unit.** A completely automatic, self-contained, tape-recorded sound slide film projection unit, the patented tape player features subsonic action signals. Tape and film are in continuous loops. Carries up to 110 pictures projected on 9x12" screen. Unit may be set to shut-off at end of showing or repeat continuously.

For more information circle 104 on coupon

**Paillard Synchromat for 8mm Sound** \$89.50. Conversion of M-8 Projector \$15. A practical device for synchronizing sound to 8mm film which may be used with the Bolex M-8 Projector and any standard model horizontal tape recorder. Projector and tape recorder operate at normal speed and are inter-locked.

For more information circle 105 on coupon

**Premier Materials Projection Stand.** The lightweight stand includes a soft light for viewing and identifying slides, electrical outlets for projector and room lamps providing automatic inter-leave, heavy duty 1000 watt convenience outlet. Has smart-looking tubular steel legs and smoothly finished wood top.

For more information circle 106 on coupon

**Projection Optics Transpaque II Projector Units.** Components may be assembled to form a transparency projector for 10x10 slides or a table or opaque projector for 11x11 opaque material. Unit may be set directly on books if desired for screen projection. Components needed for any particular purpose may be purchased as required.

For more information circle 107 on coupon

**Wallensak Automatic Slide Projector** \$149.50. Accepts 35mm, bantam, or 1 1/2"x1 1/2" format slides intermixed and shows them with 500-watt illumination — as many as 36 at a time —

automatically. Five-inch f:3.5 lens, automatic fade-in and fade-out, iris diaphragm control for viewing over-exposed slides, built-in pointer, remote control, stereo slide slot. Complete with extra condenser lens for 1 1/2" transparencies, cord, and 7 magazine trays.

For more information circle 108 on coupon

**SOUND EQUIPMENT & ACCESSORIES**

**Affton Magnetic Recording Tape.** Now introducing a stronger plastic base tape and a new oxide coating fortified with a magnetic catalyst said to allow for greater sound absorption and improved output.

For more information circle 109 on coupon

**ACA Amplifier with Constant Volume** \$245. Automatic volume control amplifier maintains a constant output within plus or minus 1 db with input changes of 30 db. Exceedingly rapid automatic gain reduction prevents syllable clipping and slow automatic gain increase avoids automatic control at syllabic frequencies.

For more information circle 110 on coupon

**Dynavox 4-Speed Portable Phonograph** \$119.95. Model 877 has hi-fi AC push pull amplifier with frequency response from 40 to 18,000 cycles; 5 watts undistorted output; separate bass and treble controls; featherweight tone arm; VM 4-speed changer with Switch-O-Matic control which shuts off entire unit after last record is played. Has two 6" speakers. Matching hi-fi speaker, incorporating an 8" woofer and a 3 1/2" tweeter, \$42.50.

For more information circle 111 on coupon

**G & H Rebel Speaker Improved** \$99 for the KR-3 folded corner horn speaker

enclosure which has been given a "new look." Available in mahogany, walnut, bland mahogany, and black lacquer finishes. Also available in kit form for \$72.

For more information circle 112 on coupon

**Gorrod 4-Speed Manual Record Player and Transcription Tone Arm** \$32.50 and \$24.50. Features 4-pole shaded induction surge motor, belt-free True-Turret drive. Starts automatically with simple movement of the tone arm and shuts off automatically at the end of the record. Supplied less cartridge. Transcription arm Model TPA-10 is adjustable for length, tracking angle, stylus pressure, and mounting height. Incorporates the best features of static balance, spring loading, and viscous damping.

For more information circle 113 on coupon

**GE Woofer Speaker** \$29.95. In 12" size with improved low-frequency reproduction in two- or three-way high-fidelity systems. The A1-403 provides undistorted output in the 40-1,500 cycle range. High power feature results from a specially treated, deep-convulsion cone edge and a linearized air gap and suspension system.

For more information circle 114 on coupon

**Johnson Smith Home Recorder** \$14.95. Provides all of the equipment necessary to convert any record player into a disc recorder at extremely low cost. Operates at any turntable speed. Package of five special recording blanks \$1.95.

For more information circle 115 on coupon

**Pentron Tape System Components.** Designed for custom installation, the components include three tape transport mechanisms, three tape preamplifiers plus a 4-channel microphone mixer. Both manual and stereophonic

recording is possible with a choice of stacked or staggered head systems. For more information circle 117 on coupon

## TELEVISION RECEIVER

**Transvision 27" Classroom TV Receiver.** Functions as a regular TV receiver or as a closed circuit monitor. The screen is six feet above floor level for good visibility from all parts of the classroom. Three-speaker audio system directs sound through a 180 degree pattern giving equal sound intensity in all sections of the room. Large swivel casters for complete movability. May be disassembled into three compact sections with carrying handles. Built-in antenna system with selector switch and fringe-area control. For more information circle 124 on coupon

## MISCELLANEOUS EQUIPMENT

**Ampto "14" Printer-Processor Photocopy Unit \$424.50.** Special high-intensity light makes multi-purpose photocopying unit suitable for use with slowest papers. Can be easily dismantled for cleaning. Designed for simplicity of operation. Handles copy up to 14" wide and of any length. Will reproduce from multi-colored copy, opaque, or transparent. For more information circle 125 on coupon

**8-Inch Desk Project Globe. RAND. 4 for \$15.** Durable steel ball has a surface which can be marked with wax crayon and easily cleaned. Water areas printed in blue; continents in brown with mountain relief shown. All political information eliminated except for parallels of latitude, meridians, dot symbols for 32 cities. For more information circle 240 on coupon

**Eastman Transparency Illuminator.** Blue glass filter behind translucent white viewing surface produces light of nearly ideal spectral quality. View-

**SoundScriber "24" Recorder-Reproducer \$950.** Compact magnetic tape recorder-reproducer records continuously for 24 hours utilizing a slow tape speed of 2 1/2 inches per minute. Alteration of the recording is impossible without detection. Tape reels hold 300 feet of tape calibrated in minutes from 0000 to 1455. Accessory tape demagnetizer renders reels ready for reuse in 15 seconds. Tape is \$8.50 per reel. For more information circle 119 on coupon

ing area is 10"x10". Gray plastic housing ventilated for cooling of the 75-watt lamp. Masks for all sizes of transparencies. For more information circle 122 on coupon

**Fotomatic Elwood Densitometer & Light Meter \$118.** An ultra-sensitive instrument for accurately measuring light qualities and quantities, it is a self-contained unit consisting of a light-sensitive crystal mounted in a transparent plastic holder and a meter mounted in a cast aluminum housing. For more information circle 126 on coupon

**Rhodes School Timer.** Portable desk timer specifically designed for use by teachers. Can be set to time in minutes or seconds. At the end of the chosen interval a bell rings. For more information circle 127 on coupon

**Shure Microphones and Phono Pickup.** Commodo microphone series available in three models suitable for P.A. and home recording are of controlled magnetic construction unaffected by humidity and temperature variations. May be used in the hand or in floor or desk stands. \$27.50-\$38.50. The Studio Dynetic pickup has a one-gram pressure cartridge and tone-arm, jeweled bearings, features cartridge in which magnet moves within stationary coil. Nitron Microphone is unidirectional unaffected by temperature and humidity variations. Adjustable swivel. For more information circle 131 on coupon

**S.O.S. Sosolvex All-Purpose Film-Conditioner \$6.95 per gallon.** Said to be harmless, non-toxic, non-flam, anti-static, containing no carbon tetrachloride, conditions, waxes film. Dries immediately without streaking, clouding, or leaving residue. Instantly seasons green prints. For more information circle 132 on coupon

**Stancil-Hoffman Oscillator Wand \$43.50.** A maintenance tool for magnetic recording equipment, the wand is a source of either a 1000 or 8000 cycle tone. When held close to the playback head, the tone is induced into the head to check operation of the amplifier. Held close to a dynamic microphone, the wand will induce the same tones. Weighs only 9 ounces, is 8" long and 1 1/2" in diameter. Unit is completely transistorized with self-contained battery. For more information circle 133 on coupon

**Telectro Tape Transport Mechanism** Suitable for hi-fi applications or studio work. Tape speeds of 15, 30, and 60 inches per second; 1-5 second starting time to stable speed, depending upon final speed selected; one-tenth second stopping time; one minute rewind; standard 19" rack mounting plug-in head assembly. For more information circle 134 on coupon

# SYLVANIA CERAMIC BLUE TOP

PROJECTION LAMPS... for all makes... all types... in all sizes

Use a Sylvania Ceramic Blue Top  
in your projector... your slides  
and movies deserve the best!

New Sylvania Ceramic Blue Tops are available in all standard sizes for any projector... to fill your exact requirements for clear, brilliant projection.

**Blue Tops offer these superior qualities:**

**Brighter**... Ceramic Blue Tops won't scratch, chip or peel like ordinary painted tops... machine-made filaments assure pictures bright as life.

**Cooler**... Ceramic Blue Top is bonded to the glass for improved heat dissipation... cooler operation assures longer lamp life.

**Longer Lasting**... Exclusive Sylvania shock-absorber construction protects filaments from vibration damage.

# Check these 10 points in selecting 16 mm sound projectors

QUESTION	WHY THIS IS IMPORTANT
1 Does it have color-coded threading?	<input type="checkbox"/> Makes threading and operating fast and simple, even for beginners.
2 Does it have safety film trips?	<input type="checkbox"/> Stops film movement instantly in case of film emergency. Guards against costly film damage.
3 Does it have Hi-Lite optical system?	<input type="checkbox"/> In connection with Mark II shutter, throws 38% more light on the screen. Assures bright pictures even in hard-to-darken rooms.
4 Does it have stationary sound drum?	<input type="checkbox"/> Assures clear, smooth sound. Has no moving parts to get out of adjustment. Scans full
5 Does it have visible one-spot oil system?	<input type="checkbox"/> Transparent filling tube shows oil level. Reservoir automatically feeds oil to all points as needed.
6 Are both reels mounted on top of projector?	<input type="checkbox"/> No overhanging reels to present a "traffic hazard." Projector can be set up on any level surface, even the floor.
7 Does it have single drive sprocket?	<input type="checkbox"/> Eases film stress, because same sprocket controls film entering and leaving projector.
8 Does it have compensating film shoes?	<input type="checkbox"/> Automatically adjust themselves to varying film thicknesses. Guard against splices catching.
9 Does it have 180° swing-out lens?	<input type="checkbox"/> Facilitates threading and cleaning of both aperture and film channel.
10 Is it adaptable for magnetic recording?	<input type="checkbox"/> Complete magnetic recording on film and playback can be added at any time by simply connecting Victor Magnesound.

**ONLY VICTOR OFFERS SO MANY IMPORTANT FEATURES**

The above 10 points give a quick picture of the advanced features you should expect in a modern 16 mm sound projector. Only a Victor brings you *all* of them. And with every Victor you also get the "standard" features of all quality sound projectors, including 2 speeds for sound and silent film, still picture, and reverse projection.

Particularly important is Victor's new red, white and blue color-coded threading. Color lines on projector clearly show where to thread and the sequence of threading. Other time-proven features—exclusive with Victor—are safety film trips, top-mounted reels, and power rewinding with no change of belts or reels.

Victor was first to develop 16 mm projectors and through the years Victor has been first to perfect improvements that assure finest pictures—finest sound—easiest operation. Victor long has been the choice of A-V experts in 73 countries.

## NEW VICTOR VIEWER

The first professional 16 mm viewer with "frame counter" priced under \$100. Large 3 1/4" x 4 1/4" screen is brilliantly lighted by 75-watt lamp. Equipped with f2.8 triplet lens. All optics coated.

**ONLY \$92.00**

**Victor Assembly 10** — Lightweight projector for small audiences. Amplifier operates at 10 watts continuous output, 18 watts peak. Available with 9" speaker, top-mounted and fully baffled—or separately eased 12" speaker as shown.

**RCA**  
**"LIFE-TESTED"\***  
**16mm Projectors**  
**scoop the field**

***with great new design advances!***

**FEATURING** great new **BUILT-IN LUBRICATION!**  
 No more lubrication needed for the life of your RCA Projector. Oil-impregnated sintered metal parts run quietly as a cat hundreds and hundreds of hours.

**FEATURING** great new **LONG LIFE FILM PRESSURE GUIDES!** Nylon sprocket shoes and synthetic-sapphire pressure shoe treat film with wholly new light touch, protect it from wear at all critical contact points in film path.

**FEATURING** great new **BOOST IN LIGHT ON SCREEN!** RCA Projector is first *designed* for use with new 1200-watt lamp. Higher-power blower rotor moves more air to keep aperture and mechanism cooler, assuring complete film safety. Optional two-bladed shutter adds another 40% light on screen for brightest picture ever.

**FEATURING** great new **WEAR-RESISTANT CASE!** Surf-green fabric case takes more scuffing and abrasion and shows it less than any standard case in use today. It's twice as resistant to ordinary wear.

Remember these great new RCA "LIFE-TESTED" features. With them, you'll all but forget maintenance for your projectors. And of course RCA Projectors *still* thread easiest of any 16mm machine. In fact, their distinctive new surf-green finish makes for even simpler threading and operating in darkened rooms. The same superlatively clear, RCA-engineered sound is yours, too.

See and hear how far ahead of the field you'll be with the great new "LIFE-TESTED" line of RCA 16mm Projectors. Ask your RCA Audio-Visual Dealer about the powerful two-case RCA Senior, the compact RCA Junior. Their "LIFE-TESTED" features can be *yours* today.

\*Rigid endurance standards have been set for RCA "LIFE-TESTED" Projectors. Individual components as well as finished projectors are subjected to continuous testing to evaluate the durability and efficiency of all operating parts. "LIFE-TESTED" at RCA means better more reliable performance from RCA projectors.

**CORONET'S THIRD  
NEW FILM  
SPECTACULAR**

# The Jamestown Colony (1607 through 1620)

## commemorates a 350th Anniversary

This film in Coronet's new series of educational spectaculars\* brings to the screen in dynamic color the deeply moving account of the first English settlement in America.

The authentic restorations of the Colony, used as a setting for the film through the courtesy of the Jamestown Festival of 1957, insured highest standards of accuracy in both costumes and settings. The film opens with three hardy ships sailing to the new land, and we meet some of those who were aboard. We share the excitement of sighting the Virginia coast in 1607 and, as the story develops, we watch the adventurous group build a new life. The minor successes and frequent disasters of the early years are graphically illustrated. We see the community overcome these hardships, however, and establish what became the first permanent English colony in the New World.

Here is the essence of a great period in history—re-enactments of the historical events of 350 years ago, made richly alive for pupils in the intermediate grades.

Running time: 16 minutes; also available in black-and-white.

\*Other Coronet films in the new spectacular series—*The French Revolution* and *Audubon and The Birds of America*. Other distinctive new Coronet films in either color or black-and-white:

### The Midnight Ride of Paul Revere (1 reel, 11 minutes)

This unique film visualizes Longfellow's poem, "Paul Revere's Ride," and relates it to its historical setting. The re-enactment of this world-famous ride against a background of authentic New England locales creates an atmosphere of reality which encourages interest in the source of great literature. Intermediate, Language Arts.

### Travel in America in the 1840's (1 1/2 reels, 13 1/2 minutes)

The presentation relates the means of transportation of the mid-nineteenth century to a series of important historical changes—westward expansion, the growth of trade and commerce, and the movement of people and materials within the country. Intermediate, History and Social Studies.

### Climate and the World We Live In (1 1/2 reels, 13 1/2 minutes)

Here is a lucid explanation of the factors which determine climates throughout the world. Major types of climates are identified and their variable effects on human activities are pictured. Junior High, Geography.

### Simple Plants: Algae and Fungi (1 1/2 reels, 13 1/2 minutes)

Excellent nature photography and microscopic views clarify the major characteristics of simple plants and how they differ from higher plants. Algae and fungi are contrasted in their natural habitats, and their human uses are illustrated. Senior High, Biology.

### What Do We See in the Sky? (1 reel, 11 minutes)

Freddie learns about the sun, moon, planets, stars, and constellations in a presentation which directs youngsters in the primary grades to observe, identify, define, and interpret things they see in the sky. Primary, Science.

Write for preview . . . If you are considering purchase, fill in coupon for preview prints of these Coronet films. If you are interested in rental only, request a list of Coronet film rental libraries.

## On the SCREEN

### COVER: Life in a Colonial Home

This month's cover depicts early colonial home life in the English colony in Virginia, and is a scene from the film "Life in a colonial home 1720-1785" which was produced for International Film Bureau, Inc., by Visual Educational Films, Inc. It is a scene that seems to appropriately symbolize this season of the year when we are preparing to celebrate Thanksgiving, and are reminded of the rugged existence of our Pilgrim forefathers. Life in those days was relatively simple, as compared to our modern standards; simple in that they enjoyed none of the pleasures and conveniences that we take for granted. We have much to be thankful for, as we view this scene; the least being the wealth of arts and crafts that are our colonial heritage.

### December Blue Book Does Double Duty

The December issue will once again be a double number . . . in addition to all its regular features and departments, it will carry the annual BLUE BOOK OF AUDIO-VISUAL MATERIALS. In that separate section, will be listed, described, classified and indexed, the great bulk of 1957's new films, filmstrips, slide sets, classroom instructional records and non-projected teaching materials. Sale and rental rates, name and address of principal source, and recommended grade level are indicated for each entry.

This year's December issue will be somewhat "different" also, in that it will contain short review articles, in what might be termed "year-book" style on the developments of the past year in the areas of production and

use of instructional and recreational motion pictures, filmstrips, slide sets and other instructional materials. These will be written by leaders in the audio-visual industry who are recognized authorities in their various specialized fields. Thus, not only the actual materials, but also something of their trends and philosophy will be summarized for ready reference between the covers of a single magazine.

### Don't Hide Your Light

We feel without question, that there is a wealth of good ideas, talent and material going to waste, because either there is not an opportunity, or no effort is made, to utilize them. We are thinking primarily of others in the field of audio-visual activity, who might be in a position to share their knowledge and experience with the readers of Educational SCREEN. Haven't you ever thought, for instance, that you would like to tell other people, what YOU know about a particular A-V subject? Well, you don't have to be a writer or a specialist, to do this. If you have something interesting to talk about—tell us about it. If you should be fortunate enough to possess the facility of clearly putting your thoughts in publishable form on paper, so much the better, but it isn't necessary, for our editorial staff will whip it into shape for you. Just the idea, or proven practice; the nucleus—is all that is needed. IF it is important, and interesting or unusual; if it is something that we feel others would benefit by knowing about, we will print your story and give you credit for its origin. It goes without much emphasis, however, that reasonably good illustrations (art or photographic) should accompany the article. GM

**Which one of these meters is used for audio-visual purposes?**

**ANSWER:** The one on the right is the conventional photographic meter which gives light intensity. The one on the left gives foot candles, which is the measure of light used for audio-visual purposes.

*Even though both meters show that rooms equipped with LEVOLOR A-V BLINDS give a zero reading, our Audio-Visual Department believes that the maximum darkness of the room is not the major consideration! The lighting conditions of an audio-visual room should be at the complete*

discretion of the instructor. Various conditions and various subjects require elasticity in the control of light. This control should be simple and immediate.

The Levolor A-V Blind enables the instructor to change the room from maximum darkness to a soft diffused light—in a matter of seconds—all by an adjustment of the slats.

*Full details and specifications will be sent on request. Write to LEVOLOR LORENTZEN, INC., Audio-Visual Dept. 720 Monroe St., Hoboken, N. J.*

Be sure to specify

## For Choral Reading

*Editor:* I would like to suggest to your readers the use of the opaque projector for choral reading. By projecting the words of the poems on the screen, the teacher focuses the attention of the students and enables them to maintain good posture while reciting. The students are thus able to follow the directions of the leader more readily than from individual books and papers.

*Gertrude S. Williams*

Building Coordinator  
Dunbar Junior High School  
Mohile, Alabama

## Call For Correspondents

*Editor:* Several staff members in this school are interested in obtaining English speaking correspondents, ages 11 to 14, throughout the world. Please advise as to method to be followed.

*H. L. Brown*

Supervisor of Teaching Materials  
Springfield Public Schools  
49 East College Avenue  
Springfield, Ohio

*Note:* Correspondents in this age group who would be interested in making this connection, please contact Mr. H. L. Brown directly at the address given above.

## Hometown Disapproval

*Editor:* Your off-the-cuff conclusions concerning school auditoriums indicate that old age is creeping on too fast, that you have forgotten what an auditorium did for you, and how very little appreciation you have for the contributions made to the total school life through the assembly. You lack practical knowledge.

*Arnold B. Swift*

Assistant Superintendent of Schools  
Rochester, New York

## Support From New Jersey

*Editor:* I had just read your editorial "Two Great New AV Tools" in the September issue of *Educational Screen* about the publications "A Crisis in Education" and "Gateway to Learning" when your letter arrived with these publications.

The Commission has done an outstanding job in the selection and preparation of the concepts which the lay person must have in order to understand the vital role audio-visuals play in modern education.

I plan to secure enough copies of both publications to distribute to key people in the Union.

*Paul R. Maloney*

Coordinator, A-V Services  
Township of Union Schools  
Union, Union County, N. J.

## Appreciation From Afar

*Editor:* We subscribed to your magazine a short while ago and have so far received two issues which we greatly appreciated for the variety and quality of their contents. We were especially interested in your reviews of *New Materials* and *New Sources* and will be glad to take advantage of the services offered to your subscribers in returning the coupons "A Service to Subscribers" and "Free Information Service Coupon."

*Yona Zarecki*

Audio-Visual Adviser  
The Israel Institute of Productivity  
Citrus House, Tel-Aviv

## Council Takes Exception

The School Facilities Council, made up of educators, architects and AV and school building industry people, takes exception to a *Readers Digest* (September) article entitled "Do School Pupils Need Costly Palaces?" It deprecates the author's "negative philosophy and generalizations . . . and the apparent failure to realize the direct relationship of the instructional program to the school plan." Miss Patricia Koenig has been placed in charge of the Council's offices at 26 Washington Place, New York 3.

## FOR LIGHTED AND DARKENED ROOMS

### TSI DUOLITE

Has built-in, folding, TV-size screen for undarkened rooms; also projects to large screens in darkened rooms.

### TSI DEVRYLITE

A long record of service to industry and education. Small and compact for auditorium and classroom use.

### TSI MODEL "D"

Both regular projection and built-in screen projection. Also repeats without rewind. An all purpose projector.

### TSI MOVIE MATIC

Extremely light weight (under 25 pounds); repeats without rewind on a built-in, self contained screen.

TSI projectors are portable and rugged, precision built, designed to make all parts of the mechanism easily accessible for service—a money saving superiority.

Let us arrange through our dealer for a demonstration for you—no obligation. Address inquiries direct to:

# WHY AN A-V DEALER?

(The following is a copy of a letter that was written by an audio-visual dealer to a school superintendent. The reason for the letter was this: The school system had bought audio-visual equipment from the audio-visual dealer. A local camera store owner objected strenuously to members of the Board of Education. Mrs. Walsh, the audio-visual dealer, wrote the following letter to help the Superintendent explain to his Board the advantages in dealing with an a-v dealer.)

Dear Dr. Superintendent:

It's something of a challenge to explain the status of an audio-visual dealer and how he serves the educational program. It is a privilege, too, and one that I appreciate.

Basically and simply, we're educational salesmen. We're not concerned with the mass consumer—the amateur who buys over the counter. Rather our total efforts are directed toward the educational field—in school, church, business and industry.

As the needs of the school differ greatly from those of the amateur lobbyist, so do the qualifications and functions of the audio-visual dealer differ from those of the more common retail store merchant.

First of all, *the a-v dealer comes to you.* Our salesmen travel thousands of miles each year, calling upon schools,

demonstrating equipment and previewing materials. Frequently they call on a school several times and make several demonstrations before a single unit is sold.

Second, *the a-v dealer knows the school's problems and special requirements.* He is a specialist. He knows the intricacies of the school budget and is prepared, for instance, to plan delivery of equipment and materials in coordination with budget and dates. He helps train teachers and pupils in the operation and care of equipment. He participates in PTA meetings and in audio-visual workshops for teachers. He works with school personnel during his school visits and at county and state teacher meetings, and at various educational conventions.

Third, *the audio-visual dealer keeps abreast of current developments* in the whole audio-visual field. He maintains membership in such organizations as the Educational Salesmen of the State, and the State Audio-Visual Council. He belongs to the national trade association, the National Audio-Visual Association. He reads their bulletins and newsletters and attends their conferences. He reads professional magazines such as *Educational Screen*. He has taken courses at the National Institute for Audio-Visual Selling conducted each summer at Indiana University under NAVA sponsorship.

Fourth, *the a-v dealer sells specially designed equipment and is concerned with its performance after it is sold.* Much of the a-v equipment we sell has been specially designed and manufactured for use in the educational field. This equipment is rugged and built to withstand hard usage. It is easy to operate and maintain.

But when service is needed, we have our own complete service and repair department. It is staffed with two full-time repairmen, stocked with hundreds of replacement parts, and equipped with modern electronic and mechanical testing and servicing devices. Our servicemen are capable of not only competently installing and repairing equipment, but also of providing technical data and assistance for special installations. They also are available as technical advisors to school architects and contractors.

The a-v dealer is often the only source for the special models of a-v equipment that he sells. He sells the schools the equipment that will best serve their needs. He makes sure the equipment is in perfect running condition when it is delivered. He backs up the manufacturers guarantee, and is always ready to provide maintenance service when it is needed.

Actually, Dr. Superintendent, we a-v dealers are in business because there seems to be a need for our kind of specialized selling and service. We come to you in many ways, and try to bring our knowledge and training with us for your benefit.

For our benefit, too! We have to *sell* the audio-visual equipment we stock, demonstrate, and service—and at a profit—if we're to continue to serve you and stay in the audio-visual business.

It's a little bit ironic that we audio-visual specialists concerned with the tools for communicating information, sometimes fail to communicate effectively when communication is most needed. I hope that through this letter I have succeeded, at least in part, in explaining the role of the audio-visual dealer and the important part he plays in developing and maintaining a school's audio-visual instructional program.

Very truly yours,  
Ruth B. Walsh, President  
JAMES E. DUNCAN, Inc.  
Rochester, New York

Note: Editor Paul Reed speaks out in proud defense of all A-V dealers, everywhere, in his interesting editorial on page 530. Don't miss this!

for perfect darkening of any size window!

## Disneyland Boasts Many Kodak 16mm Projectors

There are 18 Model 25 Projectors in operation at Disneyland: five in the TWA "Rocket Trip to the Moon" exhibit; two at the Richfield Oil exhibit which shows how oil is created in the ground and eventually extracted by drilling; 11 electrically synchronized projectors in American Motors "Circarama" exhibit. In addition, there are eight Kodascope Pageant Projectors in Disneyland's "Main Street Nickelodian," a model old-time movie theatre which features re-screening of early "flickers."

## Major Expansion Slated for DuKane

President George R. Haase has announced a major expansion of DuKane's manufacturing facilities of Plant # 1, with a greater part of the increased capacity being devoted to the production of precision electronic equipment for the Department of Defense.

Al Hunecke, Manager of the Audio-Visual Division, has announced the appointment of Stewart de Lacey to the A-V Sales Staff. Stewart's background includes Army electronics training, several years of sales experience and more recently, handling DuKane's customer orders.

Because of increasing demand for its products abroad, DuKane is expanding its international operations by joining forces with Foreign Research and Management, Inc.

## Distributors Appointed by Portafilms

Beginning October first, Portafilms, educational film producers who have heretofore been distributing their films by direct mail, will be exclusively represented throughout the country by the member organizations of The Independent Film Distributors Of America.

Regional representatives for Portafilms will be: Western States — Paul Cox, Coast Visual Education Co., 5620 Hollywood Blvd., Hollywood 28. Mid-western States — Larry Hall, Mid-America Films, Lyons, Wisconsin. Eastern States — T. C. Morehouse, 516 Fifth Ave., New York City. Southeastern States — Taylor Hoynes, Colonial Films & Equipment Co., 71 Walton St., N. W., Atlanta 3, Georgia. Texas, Oklahoma, and Arkansas — Charles Pacey, 3601 London Lane, Fort Worth, Texas.

Each regional representative will maintain a complete preview library of Portafilms subjects, including the six films in their Elementary Safety Series, their Citizenship Series, and their Art Films.

## Texas A-V Education Association Plans 5th Annual Meeting

"Making Teaching More Effective Through Wider Use of Audio-Visual Materials" was the theme for the Fifth Annual Texas Association of Audio-Visual Directors Conference November 3-5 at the Driskill Hotel.

Two hundred educators from Texas public schools and educational institutions attended the conference.

Featured was a panel discussion of the topic, "The Administrator Looks at the Problem of Effective Use of Audio-Visual Materials." Lawrence D. Haskew, Dean of the College of Education and Vice-President of the University of Texas, acted as chairman of the panel.

Dr. Harry Moore, Professor of Sociology, the University of Texas, and Dr. Bernice Moore, Hogg Foundation for Mental Health, the University of Texas, discussed the topic, "Audio-Visual Materials: Their Role in the Teaching-Learning Process."

Participants in the conference outlined action projects for the four major divisions of the Association. These four divisions include: Teacher Education — Directed by Quincy Atha of East Texas State Teachers College; System-Wide Education — Directed by Alvin Cogdill of Harlingen Public Schools; County and Cooperative Supervisors — Directed by William Harville of the Dallas County Schools; Building Coordinators, Principals, Teachers, Librarians.

Dr. Ernest Tiemann, Director of the Visual Instruction Bureau, the University of Texas, was chairman of the Conference Program Planning Committee.

## DAVI-NEA, Minneapolis, April 20-25

The 1958 meeting of the Department of Audio-Visual Instruction, N.E. A., will take place April 20-25th, at the Leamington Hotel, Minneapolis. According to the Program Committee Sunday, the 20th, will be given over to a meeting of the DAVI Board of Directors and to final local arrangements committee affairs, with an informal social hour in the evening, and a chance for "early bird" registration.

Monday is set aside for meetings of 16 national project committees. Adult Education, Archives and History, City Programs, County and Co-operative Programs, Instructional Materials, Professional Education, Radio and Recording, and Teacher Education committees are scheduled to meet Monday morning from 9 to 12. The Armed Forces, Building and Equipment, College and University, Evaluation of Secondary Schools, Legislation, School Service Corporation, Research and Television Committees will meet Mon-

# How do your projector maintenance costs compare with these averages?

Recently we surveyed a number of 16-mm-projector owners and service shops to learn how much it costs to maintain Kodascope Pageant Projectors in top working order.

We found—as you, too, will find—that Pageant maintenance costs are surprisingly low.

## Typical case histories show dollars and cents of low-cost Pageant Projector maintenance

1. It takes only 57 minutes per year, on the average, to service each of the 55 Kodascope Pageant 16mm Sound Projectors used by one large Midwest school system. Parts cost just \$1.45 per year per unit, average. Average yearly use per projector, 720 hours!!!

2. No annual repairs on 8 Pageant Projectors for three years is the report from a New York business firm with a fleet of 15 machines. The remaining 7 units needed only minor repairs during the three year period.

3. A fleet of 38 Pageants, operating about 500 hours per year, averaged only \$2.47 per year per unit for replacement parts! Service time per year, one hour 30 minutes.

4. After 855 hours' use per year, average, replacement parts cost just \$3.03 per Pageant Projector. Labor per

unit, one hour 15 minutes average. This is what one large Southwestern dealer and service shop reports after keeping records for two years.

5. 1500 hours with no time lost for repairs—that's what a West Coast coordinator of A-V services reports. His school system owns six Pageant Projectors, which have cost less than \$10.00 to maintain—about \$1.67 per machine.

## WHY PAGEANT COSTS ARE SO LOW

The simplicity of Pageant Projector design is one major low-maintenance factor. A Pageant Projector has fewer working parts to wear out, fewer to clean or adjust. And it runs at lower pulldown-shaft speeds; less vibration and wear is the result.

Pageant Projector simplicity makes minor maintenance jobs simpler, too. Parts are easy to get at.

## NO OILING NEEDED

You never have to oil a Pageant Projector. It is permanently lubricated at the factory. This completely eliminates the most common cause of projector breakdowns—over- or underoiling.

## READY WHEN YOU NEED IT

Why should you miss showing a good film at the right psychological moment

because of needless projector breakdowns? Your trouble-free Pageant is ready to roll any time you need it.

Ask your Kodak A-V dealer for a free demonstration. See Pageant Projector picture brilliance and sharpness. Hear the superb sound reproduction. Try the simplified setups. Choose from three basic models designed to fit your needs and budget.

No more oiling worries; nylon gears, oil-impregnated bearings, etc., give you permanent pre-lubrication.

For complete service accessibility, the amplifier and projector mechanism are easily removable.

## EASTMAN KODAK COMPANY, Dept. 8-V, Rochester 4, N. Y.

Please send me complete information on the new Kodascope PAGEANT 16mm Sound Projectors, and tell me who can give me a demonstration. I understand I am under no obligation.

**Kodak**  
TRADEMARK

day from 1:30 to 4:30. From 4 to 6 will be taken up by the traditional social "round-up."

At eight on Monday there will be the first of four evening general sessions, for which Dr. Walter Crewson, New York State Assistant Commissioner of Education, has been invited as keynote speaker on the topic "Extending Educational Horizons." Tuesday's general evening session is to be addressed by an industry representative. On Wednesday, after a smorgasbord from 6 to 8 in place of the conventional banquet, U. S. Senator Hubert Humphrey has been invited to address the convention. The Thursday night session is to feature a debate on the topic: "Resolved, that Educational Television is the best means of solving problems of teacher shortages, housing shortages, increased enrollment, expanding curricula, improving instruction, and expanding educational opportunity." Dr. Alexander Stoddard of the Ford Foundation and Dr. Hollis Caswell of Columbia University have been invited as the debaters.

The Tuesday and Wednesday morning sessions are to be taken over by meetings of seven occupational interest groups, including, respectively, Adult Education, City Systems, College and University, County and Cooperative

Systems, Individual Schools, Research and State Education Departments.

Tuesday afternoon from 1:30 to 4:30 will feature what is called a "White House Conference Type Meeting" on the broad topic of "The AV Credo." After a 20-30 minute kick-off speech which Paul Reed, editor of EDUCATIONAL SCREEN & AUDIO-VISUAL GUIDE, has been asked to give, the audience is to break up into round table discussion groups of 8 or 10 persons, whose reports will later be coordinated and reported at the general session the same evening.

There is a triple time-table clash, however, between this afternoon discussion, and two rival attractions: 1) The commercial exhibits, opening officially at 11 a.m. Tuesday, remain open until 6:00 p.m.; 2) study trips to schools in the Twin City area are offered from 1:30 to 4:30 the same afternoon, and 3) two series of one-hour demonstrations are scheduled to begin at 4:00.

Wednesday afternoon is left free to encourage visiting the exhibits, except for a seminar, from 2:00 to 4:30 for school superintendents and college presidents in the North Central area, and a repetition, from 4:00 on, of the previous day's demonstrations. On Thursday the exhibits are to be open

from 11:00 to 5:00. Thursday morning is set for an "Idea Swap Shop," and the afternoon for "Study Trips to See TV in Action." The various university breakfasts will be held Thursday morning and the state breakfasts Friday morning.

The annual business meeting will take place Friday morning, from 9:30 to 11:30 at which time Dr. Fred Harclerod, of San Jose State College, will give his over-all conference observer report.

## Industrial A-V Exhibition

The Industrial A-V Exhibition will be held from November 13-15 at the New York Trade Center.

Friday, November 15, will be devoted to lectures and film showings on Training under the supervision of Dr. Robert Lloyd Cantor, Director of Training at the Ronson Corporation.

According to Herbert Rosen, President, this exhibit will be most distinctive, for it will be the first time a show will deal exclusively with current audio-visual equipment and techniques for continuing training sessions, sales meetings, visual presentations, advertising promotions, etc.

Speakers at the Exhibition, Mr. John Flory of the Eastman Kodak Company, Mr. George Huntington, Director of Sales Development of the Television Bureau of Advertising, Inc.

The Film Producers Association, who had intended to hold their TV Work Shop at the end of November, have moved their date ahead to November 12 or 13 to coincide with the Exhibition in order to give their members an opportunity to attend the show also.

## NAVA ACOPI Names Hill

The new chairman of the Audio-Visual Commission on Public Information is Harold E. Hill, associate director of the National Association of Educational Broadcasters. He succeeds Dr. Charles Schuller, director of the Audio-Visual Center of Michigan State University, East Lansing, Michigan. Schuller becomes vice-chairman and will assist Hill during the next year.

## Contemporary Distributes

All British Information Services 16mm films are now distributed by Contemporary Films (13 East 37th St. New York 16 N.Y., and 614 Davis St., Evanston, Illinois. — note new Midwest office). Because of budget-cutting, BIS will no longer distribute nontheatrically in this country. Contemporary will continue to act as agent for BIS, acquiring new titles as well as distributing the present collection.

## Enjoy These Distinctive Advantages of Daylight Projection with LENSSCREEN

# Educational Filmstrips For Primary Programming!

for reading readiness...story time

Now! Rand McNally's famous "Elf Book" series on full color filmstrips complete with musical-narrative records

For children in primary grades, the popular "Elf Books" now come alive on the screen. Angel Casey (well known for her delightful children's TV programs) skillfully narrates each story. Exciting sound effects and original music flavor each story with interest-building drama.

These new filmstrips-with-records were created to give children reading readiness experiences. Each provides background information designed as a springboard for many primary studies. All filmstrips suggest related "Things to Talk About" and "Things to Do" after the story.

# Audio-Visual Procedures in Teaching

LESTER B. SANDS  
University of California

A thorough survey of latest audio-visual materials and procedures suitable for every level of education. A separate chapter covers each type of basic audio-visual aid, analyzing its uses, possibilities, and limitations.

Book relates each type of instrument and procedure to the whole teaching process. Integrates modern psychological and philosophical viewpoints with concrete descriptions and practical examples. Includes laboratory exercises and extensive lists of source materials. Keyed examination questions available to instructors. 271 illus., tables; 670 pp. \$6

• "... a significant addition to the literature dealing with audio-visual education . . . an excellent contribution to American Education."

# Film as Art

By Rudolf Arnheim

The greater part of this new paperback is an adaptation of *Film*, first published in England in 1933 and long out of print. Still in demand because it raises fundamental questions as yet unanswered, this is a book of standards, a theory of film. Four additional essays discuss related aesthetic problems basic to film and television.

## Recording Equipment Awarded as Prizes

A total of \$16,500 worth of recording equipment is being awarded as prizes to 33 high schools and the same number of colleges, by Audio Devices, Inc. (444 Madison Ave., New York 22). In the high school division the top three prize-winners are University School, Carbondale, Ill.; Edwin Denby High School, Detroit, Mich.; and St. Scholastica Academy, Covington, La. Top winners in the college division were Goucher College, Baltimore, Md.; Central College, Pella, Iowa; Mankato State Teachers College, Mankato, Minn.

## People in the News

NEW YORK: The EFLA officers for the 1957-58 year are: President, Erwin Welke, University of Minnesota; Vice President, Elliott Kone, Yale University; and Secretary, Carol Hale, Girl Scouts. The three Board members elected just before the conference are Mrs. Helen Rachford, Los Angeles County Schools; and Frederic Krahn, East Meadow, N. Y., Public Library; and (re-elected) Erwin Welke. All three will serve until 1960.

PLAINVILLE, CONN.: The Kalart Co., producer of photographic equipment, announces the appointment of Mrs. Lelia A. Virdone to the position of assistant sales manager for the company.

OPELIKA, ALA.: George I. Long, Jr., president of Ampex Corporation, Redwood City, California, has been named to the Board of Directors of ORRadio Industries, Inc. This announcement was made by J. Herbert Orr, president of the firm which manufactures Irish brand magnetic recording tape.

This development follows a recent announcement that Ampex had acquired a 25 percent interest in the Alabama firm. The Ampex Corporation has been for many years a top name in the manufacture of tape recording equipment.

NEW YORK: Walter Lowendahl has been appointed president of Transfilm Incorporated, it was announced by William Miesegaes, chairman of the board of directors and former president. Michael A. Palma, treasurer, was named executive vice president, the position formerly held by Mr. Lowendahl.

BURBANK, CALIFORNIA: Cliff Howcroft, for several years sales promotion manager for Cathedral Films, Inc., of Burbank, California, has been appointed to handle special sales and production contracts.

LOS ANGELES, CALIFORNIA: FILM ASSOCIATES OF CALIFORNIA announces the addition of Mrs. Harriet Lieban to its expanding distribution department.

MANKATO, MINNESOTA: The Creative Educational Society, Inc., announces the appointment of Mr. Paul C. Oddo as Vice President of the National School and Library Division. Mr. Oddo formerly held the position of Regional Director of the National School and Library Division of The Grolier Society, Inc.

HOLLYWOOD, CALIF.: The creation of a filmstrip department and the appointment of Paul R. Kidd as Director of Filmstrip Production is announced by Sam Hersh, President of Family Films, Inc.

Mr. Kidd, until recently director of Religious Filmstrip Production for the Society for Visual Education, Inc., at Chicago, for many years was an independent filmstrip producer, owner of Church Screen Productions.

In the religious audio-visual field for fifteen years, Mr. Kidd comes to Family Films with a rich background of production experience, to implement the company's plans for a full schedule of helpful, high quality sound filmstrips for every phase of the church's program.

CAMDEN, N.J.: Two junior High School principals in Michigan and Texas were recently named grand prize winners of a "Sound in Schools" contest conducted for the nation's teachers and school executives by the Radio Corporation of America, it was announced by Harold M. Emlein, Manager, RCA Theatre and Industrial Products Department.

John L. Arkwright, principal of the Charles B. Dubose Junior High School, Alice, Texas, was awarded an RCA Victor Mark VI high-fidelity Victrola phonograph for a sound system application which has enabled the teaching staff at Dubose Junior High to complete in two days school-wide examinations normally requiring weeks.

Lowell E. Grant, principal of the Whittier Junior High School, Flint, Michigan, also was awarded an RCA Victor Mark VI high-fidelity phonograph, for application of an RCA school-wide sound system to integrate educational radio programs with classroom courses.

## NAVA HIT BY COURT DECREE

The National Audio-Visual Association (NAVA) has been hit by a judgment of the U. S. District Court in an action brought under the Sherman Act by the Anti-Trust Division of the Department of Justice. The organization denies the substantive allegations but, without prejudice as to the facts, has consented to a decree which forbids it to do some things which it never contemplated at any time, and also some practices which in the past it contends have been solely for the benefit of the users of audio-visual equipment served by NAVA members.

The organization is henceforth forbidden to publish information on prevailing trade-in allowances or rentals on used equipment, or to "induce" manufacturers to grant exclusive dealer territories, or to refrain from selling to any person or group, or to extend discounts to nondealers. NAVA also agrees, under the decree, "not to reproduce or publicize any form or type of bid specification for the sale, rental or servicing of any audio-visual equipment," nor to prepare, disseminate or approve any type of bid specifications, nor to persuade any other person to put out such specifications.

Another section of the decree enjoins NAVA from "Permitting any manufacturer of audio-visual equipment to participate in the management, direction or control of NAVA by advisory committees or individual manufacturer or other committees of manufacturers." This would seem to put an end to the gradually improved relationship under which manufacturers' representatives have collaborated with NAVA in the improvement of consumer information and services. As a matter of fact these manufacturer representatives have never exercised "control," they are in an advisory capacity only, without vote, at Board meetings, and even their specific recommendations on such practical details as the location and time table of trade shows have often been ignored by the NAVA board. The horizon of leading equipment makers is, quite understandably, generally higher and broader than that of the local dealer. The manufacturers' concept of longer-range needs of the consumer public has proved an invaluable complement to the more immediate concerns of the local dealer. It is difficult to see how this forcible divorce serves any worthy consumer interest, or any really legitimate competitive business end.

# YOU AND THE A-V DEALER

Too many of us take for granted our A-V Dealers and the other representatives of the industry who come into our offices. We sometimes fail in our recognition of how really important they are to us. We seldom have an occasion to get an overview of the role that the audio-visual dealer plays in keeping our audio-visual instructional program rolling.

That's why we're delighted to publish the excellent letter to a superintendent, written by an audio-visual dealer (page 522). We publish it as a tribute to all a-v dealers. It is no ordinary letter. One manufacturing executive called it "a masterpiece" that he wanted to bring to the attention of all his dealers. An executive of NAVA said he "hoped all a-v dealers could defend themselves as well."

We could tell you more about the circumstances that caused this letter to be written originally. Actually, a local dealer yelled loud and long to all the Board members that he "wuz robbed." He said he sold movie projectors and he could even sell them cheaper. Why should the schools go into "big city" and buy from someone else? The Superintendent was on the spot with his Board. This letter saved the day for him, and it can help you get a better perspective on the a-v dealer.

In a public school system, a purchasing agent has a special public trust. In a very real way he is a custodian and guardian of public funds. He must be able at all times to justify his purchases to the public. He must be able to show that he is spending public funds to the best advantage of the public.

This is why purchasing agents for public school systems seek bids or quotations from several different vendors. However, not infrequently the Audio-Visual dealer loses out after he has "made the sale" by bringing newer and

better audio-visual equipment to the attention of the schools by demonstrating its usefulness to supervisors and teachers, and by offering to provide additional needed services after installation of the equipment. An inexperienced dealer without previous effort and without undertaking to maintain the equipment after it is installed, gets the order by quoting a lower bid to the detriment and loss of the original Audio-Visual dealer.

As an Audio-Visual Director, you should make sure that your purchasing agent has all the facts. Make sure he knows that your a-v dealer is not just another vendor of equipment. Tell him about all the special services he renders for you. Tell him how the a-v dealer helped you out with the loan of equipment for that special meeting. Tell him how he made special deliveries to get that repaired equipment back to you as soon as possible. Make sure the purchasing agent knows how difficult it would be for you to carry on and develop the audio-visual program in the schools if it wasn't for the a-v dealer. With this kind of information a public school purchasing agent can face his public with a clear conscience even if a projector does cost a few dollars more. He knows he is spending tax funds in the best interest of the tax payers.

There's one more thing I'd like to say about a-v dealers I've known, and about all the representatives of manufactures and producers who have come into my office through the years, and the ones I've known at meetings and conventions. They've taught me far more than all the professors did! They've taught me almost as much as I've learned from reading EDUCATIONAL SCREEN regularly—ever since I first heard the word "audio-visual."

*Paul C. Reed*

# THE WORLD - A LABORATORY

By  
**Alvin B. Roberts**

**Director, Audio-Visual Department  
Western Illinois University**

**T**HE value of travel as a means of enriching instruction has been recognized by educators for many, many centuries. Today, study in the field can be a part of practically every educational program from primary grades through high school, college, and university, if the people in charge so desire.

Probably one of the greatest factors which is giving considerable impetus to the whole movement of educational travel is the attitude of parents. During World War II almost fourteen million Americans were in some branch of the Service in different areas of the world, and through their own experiences have learned how valuable travel can be.

Also, during the past ten years, hundreds of communities have sponsored business, industry, and education days. On such occasions leaders have taken groups of teachers through their plants, and have tried to show just how that particular industry contributes to the community and the nation. There is also the desire on the part of instructors and administrators to provide a series of real experiences for their students. Coupled with this, of course, is the excellent system of highways which practically blankets the entire nation. Today, nearly every school owns a bus or a fleet of buses that are used primarily to transport the students to and from school. Therein is one of the greatest factors favoring the use of travel as a part of our instruction program; for these buses can literally become mobile classrooms.

Adding considerable interest again to this whole movement is the attitude of business, industry, foundations, national monuments, and other organizations relative to assisting visiting

school groups. At many of our national monuments housing facilities have been established so as to make it easier for school groups traveling a considerable distance to visit that particular place. Also, many of our national monuments, such as the reconstructed village of New Salem near Springfield, Illinois; historic Williamsburg, Virginia; and Greenfield Village near Detroit, all spend considerable time in training personnel for conducting groups through these various places. Our national parks provide excellent service for groups that wish to take advantage of it.

Few people realize the extent to which travel is being used. Today approximately one-half million high school students visit our national capital each year. This figure may be more significant if we think of it in this way. Let us assume that there are 200 days in the school year and that we divide the visiting students into groups of 25. On this basis, we will have 100 groups each day for the 200 days. Since the average stay is five days, we will have approximately 500 groups per day throughout the year. When we add to this the hundreds of elementary and high school groups that are visiting their own state capitals and other places of interest within the state and nation, we can readily see that travel is here to stay.

The use of community resources, through field work, has developed rapidly the past decade. One of the large cities in Illinois has a fleet of five buses that are available for school trips throughout the year, and during the past three years this school has sponsored more than 600 tours per year. So for those who feel that educational travel is only a fad, let me again state that it is here to stay.

When thinking of the educational tour there are two aspects that should be given careful consideration. The first, and a very important one, is planning the mechanical details. This includes the arrangement for trans-

portation, securing permits from parents, working out the schedule, notifying the guides of the places to be visited, acquainting the guides or the person who conducts the group through a place, with the tour objectives. One cannot overemphasize the necessity of planning carefully a field tour, whether it is of one hour's duration or one of fifty or sixty days in length. The smoothness with which the tour is handled adds a great deal to its educational value.

The second phase of the tour, which should receive careful consideration, is the educational planning. Unfortunately, this is the area that has received little, if any attention. However, after thirty years experience with field work, with elementary, high school and teacher groups, I would like to point out that the field tour is one of the most dynamic methods of imparting information ever devised by man, and will probably continue to be; unless one plans carefully for the educational outcome of the tour, it can be simply a waste of time and money.

In thinking of the educational aspects, one should apply the same procedures to a field tour as when using a film: mainly the setting up of specific objectives and procedures

**An amplifying system makes it possible to use the bus as a classroom for orientation, for discussions, reports, summarizations, and evaluations.**

**When traveling by bus one can stop frequently to take advantage of such scenic points as shown here.**

for obtaining those objectives. Let us assume that a fourth grade teacher is planning to take her group to a supermarket to see how other countries of the world contribute to our food supply. She may wish each of her students to carry a world map, and as they find an item from Norway, from Italy, or from other parts of the world, to simply indicate by number on the map. The teacher has not only set her objective but has set procedures in order to assure the attainment of those objectives. Or again let us assume that a teacher is taking a group to visit a foundry. Because of the noise, this teacher may wish to do considerable orientation work before the visit. Or she may have worked out with the person who is to conduct the group a series of cards that can be attached to the machine, naming and explaining the various operations that the students will see while walking through the plant.

On the longer tour, covering a considerable distance, there is much that can be done to enrich this whole experience. For example, when driving considerable distances, much of the time in driving can be used for making observations. Much can be learned from the observation of the homestead, the color of the soil, and the type of crops. If one thinks of such a trip as extending from Illinois to the West Coast, students will see

the homes of the Midwest, the ranch homes of the Southwest, the adobe homes of the far Southwest, the Spanish type homes on the West Coast. Farming also changes within that same area, from the corn belt to that of the small grain, or the prairie section to the irrigated regions, to be truck farming and citrus fruit regions.

Also, on the longer tour, one must not overlook the value of the interview, and the opportunity of discussing questions with the people in a given area. However, one must realize that when talking to an individual, whether just a chance acquaintance on the street or a high government official, he must know something of the individual concerned in order to evaluate his contributions. For example, in Mexico a group might have as a guide a person of Spanish descent. This person will naturally have a tendency to speak quite differently about the Spanish Conquest, than would a guide of Indian descent. Or again, in France one might observe the work of the UNESCO, and if the guide is favorable, get altogether a different reaction than that given by someone who does not look with favor on the work of that organization.

Also, whether on the short tour, or a long tour of several days duration, one must plan carefully to coordinate all of the activities. If it is a tour of considerable length, say of four or

five hours, the instructor may wish to provide some form of entertainment enroute, or to intersperse the entertainment with observations, summaries, and discussions. It is necessary that the instructor in charge use some form so he will know at all times just what is coming up insofar as the tour is concerned.

Last of all, probably the most important part of the field tour is the evaluation. When attempting to evaluate the tour one should think first in terms of the objective or the educational outcomes. If the tour was well planned and carried out successfully from the mechanical aspect, and if the students acquired the desired experiences, then a tour can be considered a success. However, one must be careful not to overemphasize the mechanical aspects. While these are essential, they do not by any means guarantee the educational success.

Today, there is definite need for leadership in the field of educational travel. Many trips are nothing more than a glorified sightseeing experience, when with competent direction they can be a valuable learning situation. There is a definite challenge to all educators who are interested in this movement to give some time and thought to making it a part of the regular instructional program.

## the automated library

... by Frank J. Anderson, Director of *The Submarine Library, Electric Boat Division, General Dynamics Corp., Groton, Conn.*

Artwork by William Woolway

IT WAS rather late, but I decided to finish reading Rider's biography of Melvil Dewey before retiring. I fixed up one of my favorite sandwiches of corned beef, cheese, strawberry jam and sliced onion on pumpernickel to sustain me as I read. Finally finishing the book and the sandwich I went to bed, and lay there rumberling and rumberminating on the amazing Melvil and his propensity for innovation. I finally dozed off into a jet-propelled extrapolator machine which whisked me into the future and dropped me in a large American city in front of the public library. The facade wasn't too impressive. A Greek revival style building with "CARNEGIE LIBRARY—1902" chiseled in the stone over the entrance.

"Looks like my hometown library," I muttered, entering the building. A man with a slide rule sticking out of his pocket, who claimed to be the librarian, took me in tow.

"As a librarian you should know that you can't judge a book by its cover," he chided. "Wait until you look over this operation before you form an opinion."

"We have just gotten permission from the Board of Trustees and the

City Commission to raze this obsolete monstrosity and utilize the space as a heliport for our patrons. But until it is razed we have our reading rooms and stacks here. This section hasn't been completely modernized and is still only partially automated. This lag in modernization is due mainly to the opposition of some local sentimentalists who object to wrecking the building and also object to having the entire book collection on microfilm. The old fashioned book with its lack of uniformity in size is just a space wasting nuisance. The books in these stacks will be microfilmed by next year and the films moved below to central storage before we level the building. The physical books will be shredded and sold for waste paper. Which will not only supplement our income, but is somewhat of a patriotic duty since the government needs paper for boxes to pack the component parts of nuclear devices.

"So you see this transitional department isn't completely modern, but we've progressed pretty far in the last fifty years. We still circulate the old fashioned relatively heavy books, but shelving and delivery of books requested by patrons have been speeded

up. Circulation is handled by an old 1956 model Vaculux electronic brain.

"Card catalog? Heavens, those outmoded things went by the boards twenty year ago. Had quite a fight on our hands before we were able to get rid of them. Obstructive tactics by the old die-hards, you know. Their favorite agrument was: *a library just isn't a library without a card catalog for the use of the general public.* Utterly absurd argument, of course. Some fuddy-duddies are present in every century who try to obstruct progress. Concepts change with the times and at our present level of development we are really a materials center rather than a library in the dictionary sense of the word.

"Patrons were always getting confused and bogged down in the intricacies of using the card catalog. You know how library patrons are! They either don't know what they want, or they get the author and title confused. We had to employ a full time staff member whose sole duty was un-bewildering our patrons. Now two electronic technicians handle the entire three level operation here.

"Let me show you our circulation set-up and see how it compares to the better with the old fashioned ways of the Fifties. Let's eavesdrop on this person who is about to speak into the microphone which activates the Vaculux. Time this transaction."

Patron speaking into mike: "I'd like a book by Herman Wilsson, or was it Wilsson Herman? I think the title is *Thoughts for the Cobalt Age.* That's all the information I have except that I know it is a big thick book with a green binding."

"Notice that red light on top of the rectangular book delivery and charging unit? The cabinet that looks like a cigarette vending ma-

chine. That red light means that the Vaculux is working on the patron's request. If there are errors in author or title the machine will unscramble them.

"Peek into the stack room and you'll see the electronic book plucker at work. There, it has the book, now it's placing it in the pneumatic delivery tube. See the light turn green on the book delivery unit? The patron is inserting his library card into a slot in the unit which automatically charges the book and operates the contact which drops the book down to the delivery slot for him to pick up. That transaction took ten seconds. Rather slow. I must tell our engineer about this, the fransort contacts are probably dirty.

"Let's see what book the patron got. A small, slim volume with a red binding, *Thoughts for Today* by Herbert Williams. No, the machine didn't make an error, that's the book the patron wanted all the time.

"See how much better and faster service we can give without searching the catalog, having the circulation librarian trying to divine what book the patron is looking for? In case a book is out in circulation when it is requested the automatic book plucker touches the spot where the book should be which makes electrical contact with an IBM machine. The IBM machine searches the circulation records which are kept on IBM cards, and delivers a typed note to the requesting patron reporting the status of the book.

"Mechanical difficulties? Not many. Oh, a couple of years ago some contacts jammed and all the machine would deliver for two days was Norman Vincent Peale's *Power of Positive Thinking*. The city was just crowded with determinedly happy people that week.

"Here, let's take the elevator down to the fifty foot level and our Readers' Service Department. Half this level is devoted to 100 four foot square cubicles for our readers, and the other half to our materials storage. This fifty foot level is rather advantageous, as all external street level and air level noises are excluded. Sound-proofing deadens the patrons' voices, footsteps and other local noises. We are completely air-conditioned so that we may maintain temperature, humidity and ventilation at the optimum level for both patrons and materials.

"Each cubicle is outfitted with a comfortable chair, a microphone and a 3' x 5' viewing screen. All a patron has to do to make known his wants is to speak into the microphone. Our electronic equipment immediately goes to work on the request and the

desired item is projected onto the screen in a matter of seconds. A page or a picture may be held on the screen as long as desired, the length of time being controlled by the patron. Our materials center has books, periodicals, newspapers, pictures, maps and movies all recorded on two millimeter film. Anything in the collection may be projected onto the individual viewing screens.

"Twenty of our cubicles are private listening rooms. We have musical performances, speeches, books and lectures recorded on tape that may be heard at the listener's request. We also have a telephone readers' service that is handled on a subscription basis for a nominal fee. Patrons phone their requests for filmed or recorded materials and we transmit the materials to them through their home television sets, or hi-fi equipment. This is sent on a closed channel so some wise guy can't 'free-load' on our service.

"Acquisitions and processing are done on the seventy-five foot level. This is where we have our radio and TV sending and receiving equipment, and our photographic and recording laboratories. We have standing orders for 500 scholarly and general periodicals and ten newspapers. These are telephotoed to us by the publishers as they are printed, and automatically transcribed on the 2mm film for our files. Books are treated in the same manner. We have standing orders with all the university presses who telephoto their total publishing output to us as it is printed. We have agreements with the major American trade publishers to receive all their output of books costing more than five dollars. The theory behind the five dollar price being that this bottom limit will catch all their meritorious books. European publishers haven't automated too well, and transatlantic photo transmission is rather poor. The European publishers cartels require that the book as well as the film be purchased, so we buy foreign publications in the traditional book form. Of course we microfilm them as soon as received and pulp the books.

"The pride and joy of our library is the reference collection, located on the third level, 180 feet underground. This department is completely independent of the other two departments. You may have wondered why we entered through an air lock. Well, the atmosphere is artificially maintained here. The oxygen, nitrogen and carbon dioxide content of the atmosphere is rigidly controlled, as is the temperature and humidity. We are completely isolated here, and impervious to any type of bombing attack.

"The reference department is divided physically into three bays. Over here in this bay is a dormitory, kitchen and dining room ready to serve as an emergency shelter for 100 persons, and stocked with a month's food supply. Another bay houses the thousands of reels of microfilmed reference material, and the electronic selection and reproduction equipment. The third bay is the public reference room furnished with individual tables and chairs, comfortable lounge furniture, and the two electronic brains which are the vitals of this department.

"The smaller of the two brains is the patented READY REFERENCE ORACLE which is prepared to answer questions requiring only a brief answer. It handles such questions as 'When was Christopher Columbus' second voyage?'; 'How many sides to a polyhedron?' or 'Who won the second race at Belmont?' The patron merely stands on a platform in front of the ORACLE and asks his question. You'll notice how the machine lights up like a pin-ball machine, buzzes, whirs and ejects a small card. The card has the answer to the question printed on it, with the patron's weight and fortune on the verso.

"The larger machine is prepared to answer detailed reference questions. This outfit is called the T. J. WATKINS' NUMBER TWO DELPHOS and has the legend THINK inscribed across the top of it in ten inch purple neon tubing. The THINK sign is hooked into a 'skiddoo' plug and blinks on and off. The NUMBER TWO DELPHOS is operated like the ORACLE except that it has a console of push buttons for the patron to use in indicating his needs. For instance the console has buttons marked: Brief Answer (500 words); Medium Answer (over 500 words); Exhaustive Answer; Term Paper, high school; Term Paper, college; Thesis; and Dissertation. The term papers, theses and dissertations are supplied with the type of errors and bibliographies one would expect for the various educational levels. Another series of buttons for selecting the form the patron wishes his answer to be in are on the console. For example the patron can have his answer typed, microfilmed or taped."

These machines were very popular with the patrons and I had to wait a few minutes before I could present my question. Pushing the Brief Answer button I asked, "How did I get to be here in this library of the future?" The machine became activated, and clicked, whirred and buzzed. The buzzing seemed to continue for an inordinately long time and I finally returned to 1956 and shut off my alarm clock.

"The Night Before Christmas" from the EBF film.

# Christmas Packages

Mrs. Olwyn O'Connor,  
Assistant, Audio-Visual Department  
Schenectady Public Schools  
Schenectady, New York

THOSE of us who maintain central libraries of audio-visual materials experience a holiday rush similar to that of the retail stores. Our Christmas "shoppers" are as harassed and eager for variety of selection and fast service as those seeking gifts.

A satisfactory circulation of Christmas materials to all 21 Schenectady elementary schools (7,542 students) during the brief period of the 15 school days between Thanksgiving and Christmas vacation was not adequate via our normal booking schedule.

We were operating under an outmoded "early bird" system since those teachers not sufficiently foresighted enough to place an early request were often disappointed. Our basic problem was one of establishing a special circulation scheme that would measurably increase our effectiveness in meeting the increased requests during the holiday season.

New "customers" added further impetus to our need since failure to supply an initial request tends to discourage further employment of A-V materials. We recognized our failure to make optimum use of the opportunity to orient the "uninitiated" if one new "customer" could not be served.

Obviously, the purchase of limitless duplicate holiday materials would prove too costly and seriously impair the building of a well balanced collection.

An analytical examination of the current Christmas bookings emphasized the time lost in transit. A material was frequently booked more than once for the same school with other schools being booked in between. This resulted in unnecessary deliveries and pick-ups. A more efficient method would provide for one delivery to

serve the entire school's use of the material.

The very nature of holiday materials makes a special circulation scheme feasible —

1. Christmas materials are usually used for pure enjoyment rather than to serve a curriculum need. The planning and follow-up required for A-V materials serving as integrated parts of the curriculum can thus be safely minimized.
2. Such materials can be shown to larger assemblies than we would ordinarily recommend as desirable.
3. Most holiday materials have the ageless quality of the holiday itself and can be enjoyed by all children from kindergarten through junior high.

With these thoughts in mind, we hit upon the idea of dividing our holiday materials into "packages" or kits which would circulate to a school rather than to an individual teacher — the circulation to be managed on an A-V department controlled schedule.

In order to make a fair distribution of holiday materials an initial worksheet was prepared. The factors determining the final schedule's preparation were:

1. Size of school (length of time material will be required).
2. Geographical location of school

## WORK SHEET

School	Kit One Date	Kit Two Date	Kit Three Date
Brandywine	Dec. 2	Dec. 18	Dec. 10
Elmer	Dec. 3	Dec. 17	Dec. 13
Euclid	Dec. 4 A.M. only	Dec. 10	Dec. 17
Etc.			

School

## FILMS

Kit 1 — 3 films	Catalog No.	Title	Date _____ (30 minute program) Grade Level
	XX45	Littlest Angel	All
	X165	Visit from St. Nicholas	All
	X120	Christmas Rhapsody	All
Kit 2 — 2 films			Date _____ (23 minute program) Primary PEJSA

Kit 3 — 2 films			Date _____ (23 minute program) All Upper Elementary
	XX101	How the Animals Discovered Christmas	
	XX77	Silent Night	

(for possible noon-hour transfers)

3. Spacing of materials to each school (prevention of feast or famine situation occurring).

From these worksheets individual school schedules were prepared and distributed. The development of effective schools was a recognized must for the five adequate communications to the successful operation of such an arrangement.

It was hoped that by careful selection of package contents and advance notice of the schedule the "customer" would find the new method saved time, effort and disappointment. We sought to avoid any similarity between the A-V Christmas packages and the traditional holiday grab bag by having each package contain a representative and well balanced collection of materials.

The seven Christmas films owned by our system were divided into the following packages each providing a 23 to 30 minute program:

These "film packages" were booked on a one-day basis for the larger schools and on a half-day basis for the smaller with a noon hour transfer of materials where expedient.

Filmstrips and records presented a more complex problem since we own more of each with some duplication. Kits were assembled containing from 6 to 7 strips or records. Wherever possible, duplicate or very similar kits were prepared in order to permit longer bookings. Where we had or could approximate duplication, each kit would then be required to serve only one half the total number of schools. The filmstrip and record kits are as follows:

We have been distributing these "Christmas Packages" for three years. After both the first and second years, we sent out questionnaires designed to indicate the teacher's opinion of this trial program and to solicit suggestions and criticisms. The responses were overwhelmingly in favor of continuing the program.

It is now established fall routine to prepare the schedules and notify the schools of the material's expected arrival date. Christmas A-V material is thus available to everyone with no effort on the individual teacher's part. She has merely to consult the schedule and make her plans accordingly.

This lightening of the teacher's load during the hustle and bustle of the holiday season has proved most successful in our system. The A-V Department is able via the holiday scheduling of materials to successfully serve all our schools during the pre-Christmas period without unwarranted duplication of materials or effort.

**Student Uses Tape Recorder To Win Spelling Championship**

Bill Thomas, 14-year-old eighth grader of Opelika, Alabama found a new use for recording tape — and won himself the title as Alabama's champion speller of 1957.

Bill gives his mother, a school teacher, credit for an assist.

"She suggested we get a tape recorder to help me prep for the contests after I placed second in the state finals last year," he said.

His mother, Mrs. W. R. Thomas, is a fourth grade teacher at Morris Snower Elementary School in Opelika. His father is a technician with Southern Bell Telephone Co.

The sorrell-topped youngster used a tape recorder as a spelling prompter in training for the "Spelling Bees" which brought him the state championship.

Bill explained how he prepared his "prompter tape":

"I worked up a list of words I wanted to learn. I would pronounce each word, give its definition, leave time enough on the tape for me to spell the word, then spell the word correctly. I would play back my prompter tape, spelling each word then listening to the correct spelling to see if I had it right."

The lad put 900 words on three reels of tape in preparing for his competition.

A county winner for three consecutive years, the youngster spelled down contestants in county and district competition to gain the 1957 Alabama finals in Birmingham. There he won over 55 other competitors from over the state.

# Eleven Years of the Malayan Film Unit

## A Record of Solid Achievement

by Tom Hodge\*

**A**T THE end of World War II a complete set of film equipment belonging to the Army was put up for sale at Command Headquarters in Ceylon. To this happy accident, and the opportunism of the then Director of Public Relations in Malaya, the Malayan Film Unit owes its existence.

Having persuaded his Government to purchase the entire lot, he began to build "from scratch" an organization which has now gained the special distinction of being known throughout the English-speaking film world by its initials alone.

### Personnel Problems

The beginning was not easy. Personnel, gathered together from Malaya and elsewhere, had to be trained to work as a team. Some of them, indeed, had to be trained in the fundamentals of film-making, of which they had no previous experience whatsoever. Some were fresh from school, others were "still" cameramen, while a few came over from the former Crown Film Unit, which had been making a film on Malaya just after the war. Working quarters were found for them in thatch-covered huts which had been used by the Japanese forces.

By the end of 1947 four films were completed which foreshadowed in miniature the variety of output which

was to follow increasingly in the next decade. They were: "Face of Malaya—No. 1," designed to "introduce Malaya to its people," the first two issues of "Malayan Gazette," a cine-magazine series and the "The Royal Gift," Malaya's own record of the wedding of Princess Elizabeth. These films inaugurated the Unit's routine work of information and education among a mixed population of Malays, Chinese, Indians, Singhalese, Eurasians and others who comprise the Malayan nation.

### Current Output

Today the Unit's current statistics for production and distribution speak for themselves. It finishes about 60 films annually, its own laboratories furnishing nearly 6,000 prints in both 35 mm and 16 mm. It provides for the diversity of the country's scattered population by circulating 123 projection vans throughout the rural areas, showing its films with Malay, Chinese, Tamil or English commentaries.

Thirty-seven of its productions have been shown in 54 countries. In both East and West it has garnered an impressive list of awards from international film festivals, and — what may seem stranger still — has been earning a significant annual revenue (amounting to over 500,000 Malayan dollars in the last complete financial year).

During the first nine years of its life, the Unit had a number of Europeans on its staff serving as Director-Instructors. At intervals, other directors were invited from overseas to work for a spell with the Unit, thus maintaining its contact with the latest in documentary thought and practice and giving its members the stimulation of a fresh personal approach. In 1952 the Foreign Office in London seconded me to guide the Unit's progress as Film Adviser, an appointment which, as it happened, was to cover the

years in which M. F. U. secured its international reputation.

When I lived for a while with its special problems of film-making, they seemed to crystallize into two simple questions which were seen firmly planted in the "communal mind" of its members: "What do you want to convey?" and "what do you want people to feel?" How well the Unit developed the habit of appraisal can be judged from the details of its festival awards and revenue from 1952 to 1957.

### International Awards

Since 1954, of the dozen major awards in the documentary category available at the four Asian Film Festivals which have taken place, eight have gone to M. F. U. It has taken the Golden Harvest Award for the Best Film of the Year, and other Golden Harvest Awards for Best Planning and Best Photography. At the 1955 Cambodian Film Festival the colorful historical reminiscence of pageantry and architecture in "Malacca - Then and Now" brought it the Best Asian Tourist Film award.

European film festivals have become familiar with the M. F. U. credit-titles. In 1956 "Timeless Temiar," which observed the daily life of a tribe of Malayan aborigines, scored Diplomas of Merit at Edinburgh and Venice. A Silver Harp at this year's Cork Festival went to "Wayang Kulit," a description of the visit of a "shadow play" company to a rural settlement.

All of these films were routine productions, in the sense that they were made in fulfillment of the purely domestic requirements of the Malayan Government; they were intended as vehicles of information and teaching aids for the people of Malaya. None was planned in the context of film festivals or distribution in other countries. Their success in the one

*\*)Many audio-visual people in the United States will remember Tom Hodge, who served as Director of the British Information Service Films Division in this country from September 1942 until January 1950, when he was assigned to the post of Film Adviser to the United Kingdom Commissioner-General in South-East Asia, with headquarters at Singapore. During World War II Mr. Hodge took a leading part in fostering the distribution and use of public informational films dealing with the Allied war effort, co-operating closely with representatives of our Office of War Information.*

and their wide currency in the other have been, like the inception of the Unit itself, entirely unforeseen.

## Service to Industry

Many of the M. F. U. productions circulating abroad are earning income through commercial exhibition in cinemas or on television but this is by no means the major source of the Unit's revenue. There is at present no film production whatsoever in the Federation of Malaya apart from that undertaken by the Unit. M. F. U. is therefore the only local organization equipped to accept commissions for sponsored work, which in Britain, for example, would be shared by a large number of film companies serving the needs of industry, both to sell its goods and services and to reinforce its public relations.

The Unit has been able to take on such work without detriment to its normal production program for the Government Information Services. But some of the films produced for the special purposes of client bodies contribute incidentally to the fund of informational films available on Malaya. "Doing Nicely, Thank You," made for the National Union of Plantation Workers, shows the right and wrong way to conduct trade union matters, and thereby put trade union movements of other countries in closer touch with their opposite numbers in the Federation.

Four other sponsored films combine to give an impression of Malaya as a virile commercial unit — "Tin From Malaya" (made for the Tin Advisory Board), "Rubber From Malaya" (for

the combined rubber industry), Malaya's Iron Mountain" (Eastern Mining and Metals Company), and "The Golden Queen," the story of the young and growing pineapple industry (Malayan Pineapple Board).

## Ten Historical Years

To look through the chronological film list in the M. F. U. catalogue is to review Malaya's history of the past ten years, grave and gay, in the space of a few minutes. In fact, the Unit can fairly claim to have played a part in that history.

Recording every stage in Malaya's march towards independence, it has been a significant factor in establishing that unity and harmony among Malaya's many races which alone make independence a workable aim. It has helped to train the people in the methods and standards of elections and census taking, and to encourage a sense of responsible citizenship. It has given basic education in hygiene and health, improved methods of farming and fishing, and acted as a clearing-house for news (films have been made about various topical matters prominent in the national life, and the "New Malayan Gazette" — renamed, but carrying on the traditions of the series begun in 1947 — bring news of the day and stories on progress in industrial and community development).

The Unit has also kept Malaya's achievements in the eyes of the world by maintaining a constant flow of news items for newsreels and television stations in other countries. M. F. U. films have even made their con-

**Peter Amavasi, a Malayan Film Unit camera-director, in action, has had five years' service with the Unit.**

tribution to the improvement and development of world resources, having been used by UNESCO and by the Colombo Plan authorities.

## Truly Malayan

When I left the Unit in June this year, a Chinese (Ow Kheng Law) remained as Head, and a Malay (Md. Zain Hussain, who directed most of the prize-winning films) as Associate Producer and Deputy Head. The three Film Directors are respectively Malay, Chinese and Indian, and the Chief Editor is Eurasian. Only one European remains, temporarily on the staff (in the Script Department, until enough suitable writers from among Malayan nationals have been found and trained). The Unit now lives up proudly to that first word of its title, reflecting the nation in its own composition as in the films which leave its laboratories.

A symbol of the new Malaya, M.F.U. is shortly to be affected by an equally symbolic event. For a long time visitors have contrasted the quality and size of its output with the primitive conditions in which it has had to work. Now there is a prospect of a new laboratory and buildings. The Unit will leave its Japanese thatched huts at last. But, after working so closely for five years with those in whose hands its future now lies, I know that with it will go the same enthusiasm and team spirit which have taken it so far since that July day in 1946 when an idea and some film equipment happened to come together.

*(The Malayan film, like all other BIF films, is now distributed in this country by Contemporary Films, Inc., 13 East 37th Street, New York 16, N. Y.)*

## WORK OF THE BLOOD

(Encyclopaedia Britannica Films, Inc., 1150 Wilmette Ave., Wilmette, Illinois) 13 minutes, 16mm, sound, black and white or color. 1957. \$62.50 or \$125.00. Teachers' guide available.

### DESCRIPTION

This film uses animated drawings and live action photography, including cinephotomicrography, to present the composition and function of the blood.

It opens with a scene showing blood vessels in living tissue then enumerates the purposes of the blood. A blood sample is spun in a centrifuge and the resulting layers of plasma, platelets and white blood cells, and red blood cells are shown.

A laboratory technician is pictured preparing a stained blood smear. Drawings and views through a microscope of these smears identify the red blood cells and show their structure.

The technician then demonstrates the procedure for taking a blood

*Film reviews and evaluations on these pages are based upon discussions by a preview committee composed of Indiana University faculty members, public school teachers, students of audio-visual education, and staff members of the Audio-Visual center of Indiana University.*

*Preview prints should be sent directly to the Audio-Visual Center, Indiana University, Bloomington, Indiana.*

count. Following this, stained white blood cells and drawings of them show their structure and the differences between red and white blood cells.

An animated drawing sequence identifies and describes the pulmonary, systemic and portal circulatory systems. The network of arteries, arterioles, capillaries, venules, and veins is described briefly.

Next, the film uses cinephotomicrography to show the red blood cells as they pass single file through the capillaries. Also, white blood cells ingesting bacteria are pictured and the work of the platelets in blood clotting is described. An animated drawing sequence shows the clotting and healing of a flesh wound.

The film continues by showing a blood transfusion and telling of the importance of blood typing. It describes the four main blood groups, shows how blood is typed, and pictures the test for Rh factor.

Concluding scenes briefly summarize the film.

### APPRAISAL

This film combines effective animated drawings, cinephotomicrography, and other photographic techniques in an interesting and clear manner to present the important aspects of blood composition and functions. In contrast to the more general films concerned with the cardiovascular system, this one deals primarily with the blood itself. Its content is effectively integrated with the junior and senior high school biology and health curricula. It also will be of interest and value to adult groups concerned with health and body physiology. Since the film treats content of a general interest also, e.g., blood types, blood counts, Rh factor, and blood clotting, general adult groups will find it educationally interesting. There are a number of technical terms used in the film which, for some groups, may need clarification before the film is shown, for example, centrifuge, fibrinogen, leucocyte, albumins, globulins and others. **WORK OF THE BLOOD** probably will be used not only to present factual information but to stimulate an interest in the further study of the subject.

— George Vuke

## INTRODUCING CANADA

(United World Films, Inc., 1445 Park Avenue, New York 29, N. Y.) 20 minutes, 16mm, sound, black and white, 1956. \$39.70. Produced by National Film Board of Canada.

### DESCRIPTION

**INTRODUCING CANADA** documents the drama of the Canadian people — their burgeoning cities, their tremendous resources, their diverse occupations — and more, their character and spirit, their traditions and aspirations.

The opening scene of apparently healthy, playing children strongly suggests, besides youth itself, national qualities of health and vigor, security and optimism. The following scene of a boy dunking himself in a rain barrel is charged with the spirit of adventure and good humor. These and many other scenes throughout the film suggest a generous and comprehensive freedom of the individual which is worn, like an old coat, casually and comfortably.

A cross-section view of the nation's broad middle class at work affords early opportunity to see the inward as well as the outward characteristics

A self-teaching guide to the operation and maintenance of all types, makes, and models of equipment.

**James D.  
Finn**

of the people, and the kinds of jobs they do. There is in this sequence a subtle humor in the visuals heightened sharply by the commentary. The narrator is saying that most of the people live in cities and towns and are busy with all the serious occupations of modern life. "Some work with their hands, but with others it's head work." In the visuals a policeman, with stern expression, is waving his hands directing traffic; next, a hulking figure with a tow-line in his teeth, and surrounded by onlookers, is pulling a bus down the street. The humor continues less obviously, but with meanings charged with irony and perhaps mischief—a padre, garbed in ecclesiastical robe, is shown ringing the church bells (what power of mind!); a telephone operator seen from low angle, plugging in a connection and clothed with serious face, seems to hold a position of dignity and importance somewhere between man and God. In the next scene, a woman picking fruit appears synonymous with a machine, while the scene following satirizes and sabotages the exalted, dignified office of the executive by picturing him with an expression of boredom and futility, mechanically stamping and stacking a mountainous pile of forms on his desk.

It becomes easy to agree with the narrator that the country means something different to every Canadian. The lyrical beauty of the lines which tell what Canada means to the lumberjack, the fisherman, the farmer, and the cowpoke, when coupled with scenes of forests and falling trees, sea gulls and fishing nets, fields of grain and ripened fruit, and the broad prairie and grazing herds result in a wedding of reality and romance which is captivating.

Canada's vastness is forcefully presented when, through animation, the maps of Europe and the U. S. alternately are superimposed upon that of Canada. And, the breadth of the land becomes impressive as clocks appear across six time zones, and the narrator points out that Canada reaches one-quarter way around the clock, and "When it's lunch time in Vancouver, it's already suppertime in St. Johns."

Here the emphasis smoothly shifts from the subject of land area and population distribution to that of getting to know and understand the people. To accomplish this understanding, a sequence follows which describes the more important historical backgrounds and influences that have molded them.

The French imprint upon the people in a Quebec village is shown to remain in their language, dress, and religion. These people of French origin have a motto—"I remember"—which serves effectively as a device

to recall (in a montage sequence) scenes of early settlements, "hacked out of the wilderness," and the English victory at the Battle of Quebec almost two centuries ago. Observation is made of the generous peace that followed the war, permitting the people to retain their language, religion, civil law and most important perhaps, the freedom to build their lives in their own peaceful way—peaceful perhaps, but rugged always, as shown by a present-day view of life in the back country.

But the wilderness is made to blossom and bear fruit before the viewer's eyes, as "unending toil wrests from the land" the individual's dream of prosperity and security, and the collective

vision of national wealth and international prestige. The results of their labor are reflected in numerous scenes of the big city, agricultural productivity, rail and shipping centers, great industrial projects, scientific research and planning, and governmental activities.

The major influences of the British are depicted in the structure of the Canadian Parliament and in the popular election of representatives.

The links between the United States and Canada are illustrated in scenes showing the freedom of movement across a common border, of tourists, businessmen, publications, goods, and ideas. The point is made that business and financial organizations, labor

unions, and industrial techniques are patterned closely after those in the U. S.

The narrator describes the leavening of the Canadian character "by waves of immigrants from many other cultures." Nationalities from almost the whole of Europe are mentioned, and particular representatives of some are shown engaged in their chosen occupations. This kinship to the peoples of Europe, according to the narrator, permits, without cause for alarm, the stationing of Canadian troops in those countries as a contribution to the strengthening of NATO. Canadian Forces abroad are pictured as cooperating with neighbors in common cause to "strengthen and rebuild the West," and defend a common inheritance.

Scenes of the Canadian Arctic reveal military installations, modern machines, and technical apparatus widely distributed to form an important flank in the defense of the entire Atlantic community.

It is evident from the pictures that the cold weather does not seriously deter the Canadians from their occupational or recreational pursuits. The people of the far North—traders, trappers, prospectors, missionaries, and Eskimos appear to be happy and unperturbed by all the snow and ice. Further south, a huge crowd is shown watching an exciting game of hockey.

Canada is presented as a new and challenging frontier demanding ruggedness and skill, boldness and determination—a land of great projects like the Arctic defenses, iron mines, aluminum smelters in a virgin wilderness, giant pipe lines from West to East, atomic research at Chalk River, and the St. Lawrence Seaway.

A final panorama of sights and sounds impress upon the viewer the struggle of an emerging nation to know herself—to understand and organize her purposes and ideas, and to express herself in art and thought.

As the children in the opening scene represent the nation's youth and future hopes, so the final scenes of breaking day symbolize the dawn of a great and glorious day for Canada and the world.

### APPRAISAL

The evaluating committee feels that *INTRODUCING CANADA* is potentially valuable and appealing to people all the way from the elementary level to high school and adult groups. The film may be used to provide general information, stimulate discussion, and further reading. It is believed that, although the film gets its message across in one showing, additional screenings will uncover many of the finer qualities of production, continu-

ity, symbolism, and humor. *INTRODUCING CANADA* is one of 15 two-reel, black and white, sound motion pictures which make up the NATO Series.

—Preston Mitchell

## AUDUBON AND THE BIRDS OF AMERICA

(Coronet Films, Coronet Building, Chicago 1, Illinois) 26 minutes, 16mm, sound, black and white or color, 1957. \$82.50 or \$150.00. Teachers' guide available.

### DESCRIPTION

This film presents many of Audubon's paintings and portrays him as a man who changed from a French dandy to an American woodsman; from a business failure to a world renowned painter of American birds. Live actors dramatize parts of the story told by the narrator.

Pioneer activities and scenes of Audubon in a wilderness are shown as the narrator explains that in the early 1800's the frontier was being pushed toward the Mississippi River and beyond. In building America the pioneers drove away the wild life by destroying much of the natural wilderness. One of the men who loved and enjoyed the wilderness, particularly its birds, was John James Audubon.

A flashback sequence shows Audubon in Pennsylvania where at the age of eighteen he came from France to manage Mill Grove Farm for his father. The film shows some of the small animals and the birds of the countryside which delighted him with their appearance and action. His room contained many specimens arranged in lifelike positions. He spent much of his time at an old hollow tree, sketching and painting, trying to copy what he saw. Some knew Audubon as a skilled marksman, swimmer, and rider possessed of great activity and strength. To others he was a vain, elegant, violently emotional man who gave too little attention to business. After marrying Lucy Bakewell he moved West expecting to make a fortune as a merchant.

Several scenes show Audubon in the wilderness where he became a great woodsman able to find wonders other men missed. While Lucy managed the store he often spent days or even weeks sketching and hunting for other specimens to paint. Debts mounted. Audubon was jailed for a short time when he returned from one of his trips. In despair over the disgrace, Audubon left his wife to manage for the family and went into the wilderness with an ambition to paint birds so well every-

one would recognize his genius.

Audubon is shown sketching a specimen arranged behind a wire grid. The squares of the grid matched the squares on his paper. Using the grid he was able to draw size and position accurately. His wanderings took him to Louisiana, a bird paradise. Many birds were residents and others came to spend the winter. Audubon painted specimens he had killed himself or that hunters had brought to him. He planned a book of paintings but could not find an American publisher to print it.

The narrator explains that Lucy and his family joined him in Louisiana. While Lucy saved money from her teaching, Audubon continued to paint. In London he found a skilled engraver to help him. The film shows a copper plate engraved in reverse, a black and white print from it, and then the colored print. While the four hundred thirty-five paintings were being engraved, printed, and colored by hand, Audubon sold subscriptions to the book. With the help of another man Audubon published *Ornithological Biography*, a separate text for his paintings.

The National Audubon Society, represented in the film by a plaque, is only one of the many monuments to Audubon's efforts. His greatest monument is his own book, *The Birds of North America*. With this book Audubon achieved his goal of recording and thereby preserving nature.

## APPRAISAL

This thoroughly enjoyable film for upper-elementary to adult audiences can be used to present the biography of Audubon and to develop an appreciation of his work. As a secondary and more limited use it can supplement the study of birds and serve as an example of naturalistic painting for art classes. Its main use, however, will be with groups actively interested in birds, especially the adult Audubon Clubs and the Junior Audubon Clubs. The intermittent ballad music and song form an integral part of the film without detracting attention from the smooth flow of visuals. At times the song about Audubon summarizes ideas

the narrator has presented, offers explanations for the scene or painting shown, or provides a transition to the next narrated sequence. Often the music alone underlying the narrator's voice gives a rhythmic pace of freedom or flight to the visuals.

The cooperation of National Audubon Society, John James Audubon Shrine, Audubon Memorial State Park, Harvard University, New York Historical Society, and the American Museum of Natural History in the production of the film serves to indicate the documentary and authentic treatment given the story.

—Margie Gonce

# The 49 to 1 Choice

—of California Audio-Visual Coordinators

## WHEELIT

The new combination  
transportation and  
projection table

In a recent demonstration of Wheelits against competitive makes, audio-visual coordinators from 50 California schools filled out evaluation sheets, making their choice and stating their reasons.

Their decision was overwhelmingly in favor of Wheelit . . . the score, 49 to 1.

Advantages which most impressed these educators were its two large Formica-top platforms of thick, sound-absorbing wood which eliminates unwelcome vibratory noises; the large pneumatic-tired rear wheels and rubber-tired swivel casters in front for easy steering; its sturdy, precision workmanship and practical design.

Folding Wheelit  
# C-402

Folds compactly for storage in limited space, or fits easily into auto trunk compartment.

Non-Folding Wheelit  
#4102

Useful for projection equipment, books, typewriters and all kinds of school supplies.

Why we say —

## WHEELIT . . . don't carry it!

- All-steel construction (except platform)
- Two thick, sound-absorbing platforms with Formica tops, 14 and 41 in. above floor.
- Load capacity up to 300 pounds
- Heavy web straps to secure loads
- Foot brake to control Wheelit and make it ready instantly for projecting films
- Ease with which it travels in straight line, around sharp corners, and up and down stairs or curbs.

## Editorial Notes

• In the two decades from 1925 to 1945 something like 100 religious films were produced, and in the next ten years — the First Decade of the modern A-V Era — a little over 1200 were made. By this we can take our bearings. By this we know that we are two years into the Third Decade of the A-V movement so far as the church is concerned. This production was split almost evenly between the denominations (and their agencies), and the independent concerns, with a recent up-swing in the independent production graph.

• What makes a trend? One datum plus an opinion? Could be! If so we would like to report a trend — since 1955 films are getting shorter. The median length in minutes along in the early Fifties was close to 26 minutes, but in 1955 it dropped to 14 minutes. This is quite a drop. It may not be maintained. Certainly we need many short films which get a neat job done. They fit the church school as the half-hour jobs do not. Until we can get our church schools up to 2½ hours — as we certainly shall some day — the long ones are hard to schedule in the context of teaching.

• We thought it had ended, but here it is again — the second church using a film under the rental of a first. We used to call it 'bicycling.' A dealer complains. We don't blame him. What right has a church to lend to a neighbor church the property of another person? In reality a booking is an agreement to use a film at a given time and place. While no papers are signed, it is a valid contrast morally and no doubt legally, too. Pretty thoughtless, at best; rather shabby practice at worst. Let each of us examine his own house, and sweep a little if need be!

• Few young men have served the A-V movement any more faithfully and intelligently than Paul R. Kidd. First as a DCE; then with his publishing house; then as an independent filmstrip producer; then as director of religious filmstrip production for SVE; and now going as of September 1st to

head up filmstrip production for Family Films, Inc. He has earned our respect, and now we can all join in wishing him joy and success in his new work and relationships.

• The Lutheran Church, Missouri Synod, held a five-day A-V workshop on the campus of Concordia Seminary, St. Louis, this past July, bringing together representatives of 23 districts of that communion. Their sessions were concerned with a thorough study of A-V methods as they relate to church school methods and curricula. We note also that they projected area workshops for pastors, teachers, and church school workers. This, we believe, is a significant new trend, and we commend this denomination for another forward step — the appointment of a Director of Utilization.

## FILMSTRIP ART

Out of a lot of previewing I am coming to have a few questions about the art we are now getting in church-field filmstrips. I wonder if the artists who are turning out these pictures know what they are doing? More precisely, do they know what they ought to be doing?

Why do I ask?

I find good frames and poor frames within the same filmstrip. I find in many of them no inner consistency or integrity when given a 'depth' study. Analyzed from the standpoint of the dynamics of motion, psychological values, and optical dynamics and color values, what do I find? I find everything. About the time I think some artist is on the track, that he knows how to compose a filmstrip picture, he includes a series that totally invalidates this assumption.

Take psychological dynamics: The script may say that the man is talking to the woman, but the artist pictures the woman as psychologically in charge of the situation — she is standing, he is sitting; she is gesturing, and he is composed and outwardly passive. What does such a frame convey in relation to that narration? By any reasonable criteria, this is poor filmstrip art because of its contradictions and general

ambiguity.

The filmstrip artist must know something, too, about color dominance and optical dynamics. If you must have a dog in a picture, and you don't want him to get attention, picture him as standing still and don't put red pants on him, or give him a fancy hair-cut. In a certain filmstrip frame the field of attention was written material on a blackboard. But a teacher was also there. How was she pictured? Red hair and green blouse — unequal competition, indeed, for that prosaic stuff on the chalkboard. Could it teach; engage the mind, hold the attention; get its job done as a picture? No, that teacher dominated optically. In less obtruding colors she would have gotten no more than her rightful share of the mind's attention.

Why are we getting so much of this type of art? I would like to suggest that it is because much of it is created by 'artists' who are in skill and heart illustrators, and often exceedingly good ones in this lovely craft. However, the art of the filmstrip must go beyond good and superior illustrations. The role of illustrative art is to please, to divert, to supplement, to support the main stream of ideas in the text. It adds to the text, diversifies the format, energizes the imagination — in short, it enriches content pictorially.

Not so with filmstrip art. Here the pictures must carry their rightful part of the message; they must be content and text. In good filmstrips the picture is not secondary. It is primary — despite the fact that many filmstrips are made wrong end to. This is done by thinking the message out in words and then sketching in a few pictures to run along to help if they can.

If the role of illustrative art is to enrich pictorially, it is the role of filmstrip art to communicate. While related as art forms, these two "arts" have very diverse functions. This diversity, and its essential integrity, is not widely appreciated by many filmstrip producers and fewer filmstrip "artists."

This is the tragic weakness of filmstrip art in the church field, taken by and large — it simply does not com-

municate, and if it does, it is but a trickle of meaning. This is true because in the first place these pictures were created by illustrators, who have one job for pictures to do, and not by communicators who would have quite another role for them to perform. They are not educational because they do not have that structure and essential character. They convey little meaning because they were not loaded with meaning by artists who understood how to put more than incidental meaning into them.

In the church field (and if my bifocals do not deceive me as I look over the fence, also in the school field), we have been content with this low-grade type of AUDIO-visual aid simply because it talked a good message. Our criteria for the visual column was not very rigorous, and leaning on a good script or narration, pictorial mediocrity got by.

Where are these new and needed filmstrip artists to come from? Many will have to be grown. The great art schools will need to recognize the filmstrip as a unique medium and train artists who can exploit pictures in terms of the especial powers of this medium. A second source of good filmstrip artists will be from the ranks of the present illustrators. From this group will come those who are willing to learn how to create pictures that communicate.

It is altogether possible that this piece will not be too popular with some of the producers of filmstrips, and with the artists who work for them. They will resist this type of thinking. That they do, will in the long run make little difference. Not overlooking the divertive and entertainment possibilities of this visual medium, the valid future of the filmstrip is as a medium of communication and the filmstrips of the future will more and more be made by those who know how to exploit its full possibilities as a medium of communication.

In fact, every now and then I see a bit of the future even now in some good filmstrip. But, to return to the beginning of this little essay, it seems to be there more by accident than design. — WSH.

## UTILIZATION NOTES AND IDEAS

After listening to the recording, *Going Steady, Girls' Viewpoint*, at one of the evening previews at Green Lake, a number of us decided that it packed more wallop than many of the films on the subject. After all, what was there to picture? These girls discussed the pros and cons of the subject with fluency, insight, honesty, good humor, and a degree of maturity which amazed

all but experienced youth leaders. That record communicated; got over a sequence of ideas forcefully. There was nothing to show; everything to hear. A companion record gives the boys' viewpoint. These are just the thing for young people — to launch our groups into a discussion; and what could be better for the parents of teenagers — to precipitate them into talk-session on this crucial question? Highly recommended. (Frank Alpark Educational Records, 40 East 88th Street, New York 28)

—o—

We find the table-type of filmstrip previewer just about indispensable in

our local church A-V program. Right now some 30 filmstrips, useful in relation to the current curriculum units in the several departments of the church, are available for leaders and teachers to preview at their convenience. And we mean just that — Convenience. No need to set up a projector; just turn on the little viewer and settle down to a study of the scripts (or put the recording on the player close by). Preview and study prior to use is one sure way of upping the quality of A-V use, and our viewer makes this preparation more likely because our teachers find it easier and much more convenient.

## Low Cost 16MM Film Storage in Open Type Cabinets With Adjustable Racks

Now you can meet any Changing Requirements by using Open Type Film Cabinets with Racks ADJUSTABLE Vertically on 1" Centers.

Cabinets are Allmetal with CLOSED TOP, BASE AND SIDES equipped with ADJUSTABLE Separator Racks for 400' to 1600' reels and cans or any combination of these sizes. Standard Widths 30", 36" and 48". All units 75" high and 15" deep.

Also available: **FILM CABINETS WITH DOUBLE DOORS AND LOCK** (Stationary Racks) for any combination of 400' to 1600' reels and cans. **INDIVIDUAL SEPARATOR RACKS**, ideal for small Film Libraries Standard lengths 29", 35", and 47".

Open Type Film Cabinet with Separator Rack across Front.

FOR YOUR PHONOGRAPH RECORD LIBRARY

## DISCABINETS

Allmetal Sectional Discabinets with Complete Cataloging System are ideal for the Growing Record Library. Eliminates Misplacement of records, saves Time and Valuable Floor Space. Available for 7", 10", 12" and 16" Records. Cabinets with Double Door and Lock capacity 540 for any combination of 7", 10" and 12" records are also available.

Our children, along about Christmas, often refer to the "Christmas" which their Jewish neighbors are celebrating. How pleased we are to have a new filmstrip which we can use to tell Kindergarten and Primary children about *Chanukah: Festival of Lights*, celebrated in December by our friends and neighbors of the Jewish faith. Produced by the A-V Department of the Union of American Hebrew Congregations (838 Fifth Ave., N. Y. 21; \$7.50 complete with teacher's guide), this 41-frame color filmstrip shows what small children do in home and school in preparation for the lovely Chanukah holiday. We owe it to our children to help them understand with warm appreciation the religious ways and customs of their neighbors. That is one of their American heritages, and a very precious one. Recommended for purchase. An audio version of Chanukah is *The Chanuko Story*, utilizing the 4 sides of two 78 rpm records, and giving a lively and dramatic statement of the historical situation out of which this celebration arose. This is suitable for youth and adults. Recommended, and from the above source.

## GOOD AND USEFUL FILMS

Taken across the whole list, I doubt if we have any better and more useful films than the "Our Children" series by Family Films, Inc., and within this series the last two titles released — *You Can't Buy Friendship*, and *Sharing Is Fun* — are outstanding in general qualities and usefulness.

First, the "stories" make a lot of sense — to children and to adults. The films are well cast, and the acting, never easy in such films, is excellent. They hew to the line of the story. They tell it and quit. For compactness, they will be hard to match — these last two. The photography is good all the way with variety and angles but with clarity and sharpness. Here and there we wish the camera had pushed in for a closer look, but by and large there is enough detail to keep the mind satisfied.

Secondly, they accent — as the whole series has — the positive. Ten years ago, yes even five, we were squawking for "positive" films, whatever they were supposed to be. Now we have interesting film representations of children and adults living the *right* way, doing the *right* things for the *right* motives. If that's what we wanted then, we have it. If we have it, let's use it. Use it, I mean in church school, in parents' meetings, in teachers' meetings. Actually, these films are rare in that they are tri-focal as to audiences: for chil-

—0—  
dren alone, for parents alone, for both together.

Thirdly, the producer has gone to the bother to tell us how to wring the educational juice out of them, providing user's guides on each which have been written by a person with local-church know-how and know-what. I think you can get these from your A-V library. Get a set, even if you have to pay for them, and they will not only guide your use of these fine films but motivate you to programme them into church and church school year. You'll have a rich and rewarding experience with them if you hitch them to your educational job with children and their parents. (Color, \$8.00; B&W, \$5.00; 15 minutes.)

## ANY ONE FOR SLIDES?

One more inquiry on slides and I'll be ready to report a "trend"! Useful from the beginning, 2" x 2" slides are more useful now that their quality is greatly improved. Yet, the church is making very small use of this excellent visual aid to teaching and worship. But, to get to sources, the point of several inquiries: Write to SVE, 1345 Diversey Pkwy., Chicago 14, Illinois, for its catalogue of religious slides. Also, ask the Ryerson Film Service, 299 Queen Street, W., Toronto, Canada, for their folder on hymn slides and their catalogue of Ansco Color slides of many of the great religious masterpieces. It was good, indeed, to note a trickle of interest in slides for teaching and worship at the 14th International A-V Conference this fall at Green Lake. Next year let's get this medium's use officially on the agenda of the 15th to be held at Penn State University, August 17 to 23. Incidentally, Chapter Five of my book, **PROJECTED VISUAL AIDS IN THE CHURCH** (Pilgrim Press, Boston 8, Mass., 216 pp, \$2.00) explains in detail the use of slides in teaching and picture-focused worship. Any one for slides? Yes, I am!

## NEW CHRISTMAS FILM

If you are looking for a new Christmas film, with beauty in its form and emotional power in its substance, and for one that does not go sticky with sentiment at the end, then Concordia's *To Each a Gift* will fill your bill. It's for the whole family, or for children, or for young people and adults. Its message is clear, its "plot" interesting, its beauty engaging, and its touches are deft. The casting and acting are first-rate. The setting is modern, not Palestinian, showing the spirit of Christmas at work in a family. Highly recommended for general use by church and community groups. (Try your local library.)

## Church Extension

Three hundred prints of the United Lutheran film, *A Living Church*, will be in circulation this fall so that every one of the denomination's 4,400 congregations will have one showing in the September-November period. Designed to show how the "church united" can help a congregation carry out its local-parish and world-parish responsibilities, this film can also show other denominations how such films should be made. Designed by the Stewardship Department of the Laymen's Movement and produced by Louis DeRochemont Associates, this 33-minute B&W film does a nice job all the way. It shows an actual church in the making, and the documentary flavor comes through. Recommended to show church boards and congregations how a viable congregation can be brought into being in these complicated times.

## Preparing Siblings For Sister!

If you want to show parents one way to qualify the attitudes of older children on the coming of a baby, you would do well to use the 44-frame, live photography, LP-recorded color filmstrip, *How Big Is Love?*, soon to be released by Eye Gate House Inc. (Long Island City 1, N.Y.) In it we see two parents doing, with the help of their minister, a pretty sensible job of switching from negative to positive the attitudes of a pair of 7-11 year old brothers. Minus silly psychiatric nonsense, this filmstrip hews to a garden variety of tested common sense that serves all parents well when they have the wit to use it. The commentary contains several sentiments just a bit too adult for boys as this reviewer knows them. It is nicely narrated by a male voice, and the utilization time is close to 10 minutes.

## Noah, A Priestly View

Deriving its story-line from the priestly stratum of the biblical narratives on Noah, the 32-frame, full color art filmstrip, *Noah*, has good general qualities and considerable utility. The pictures are pleasingly composed but a bit too literal and realistic. The job here is to get the story told; not to show the details of the Ark or close-ups of its inhabitants. Already committed to literalism, the commentary sticks to the biblical text where possible. It is nicely narrated by a male voice and LP-recorded. The utilization time is about six minutes. It is No. 1 in a 16-unit series entitled "Heroes of the Old Testament," currently released by Eye Gate House, Inc.

Request this film now, through your local film rental source

## ADVICE FOR THE CHURCHES

We like to get letters from our readers. We especially respect those that are critical. We even appreciate them, and this time we want to share one with you. It says some things which help to balance up that July (1957) piece on how the dealers can do more business with the churches.

"I readily agree that the dealer could do a lot more toward helping the churches get what they want, but at the same time it is true that the churches can help the dealer give better service. While excellent from the church's point of view, Mr. Hockman's article presents a rather one-sided picture of church-dealer situation," so observes Mr. C. W. Krause, of the Religious Film Libraries, Box 1176, Richmond 9, Virginia.

Here is his advice to the churches, and it is good advice, based as it is on extensive experience in serving all kinds of churches over a number of years.

1. Write your orders, giving exact titles, showing dates, name of person ordering, correct address, and charge information.

2. Plan ahead and book early, and don't expect to get all your Wednesday orders filled by Sunday, especially if it is some item mentioned in the church school lessons. And this early business goes for filmstrips, too. We can't carry a big stock, and must order from the producer and that takes a little time.

3. Return material promptly, especially you big churches — our worst offenders in this. In them it seems that no one wants to post a film early Monday morning. But, how can we get to you the film you want on Friday

if it does not get back from Big Church until Thursday? Be ye helpful, one to the other, and thus fulfill an important rule of A-V neighborliness.

4. Keep your projection equipment in first class shape. A film must go out 20 times for us to get our money back, on an average, and if some one tears it up, or scratches it badly, we get caught in an awful squeeze. Look at your projector, and check into the competency of your projectionist, and don't always insist, when damage occurs, that you got a poor print from us. (Could I put in a word here? Too many churches assume that teenage boys, with a little training and practice over at high school, are competent operators. Some are; many are not. Better give them special coaching. Most will need it. WSH)

5. Set up and keep going an in-service training program that includes all the necessary know-what and know-how items. We dealers will help all we can, but there is a limit to what we can do. You can do much.

6. Expect to pay a reasonable price for the services that you get. What a sad commentary on some churches and their leaders that they are always looking for "free" service and "free" films, and "discounts" on this and that! If we are operating a film library for our denomination, we have no right to give away a little slice of our earnings to any church. The independent library operator can't afford to give much away if he is to stay in business. He makes a living by the sweat of his brow.

Lastly, this A-V business is a two-way street, and it will take some effort by the churches as well as the dealers to make it a better one. —CWK

## Green Lake — 14th Edition

The fourteenth annual International Conference on Audio-visual Christian Education was held Sept. 4-10 in the familiar, beautiful surroundings of the American Baptist Assembly grounds at Green Lake, Wisconsin. Attendance was well up to par — something over 300 active audio-visualists, including paid staff and faculty, put in a solid week of "re-thinking basic issues." The faculty was headed by Wm. S. Hockman, Church Department Editor of *Educational Screen & Audio-Visual Guide*; Dr. John W. Bachman, Union Theological Seminary; and Dr. Leslie

Greenhill, Penn State University. Approximately half those attending were first timers, the others had come anywhere from twice to Alex Ferguson's all fourteen.

The planning committee this year hit upon the idea of devoting a day apiece to selected "issues" (Biblical visualization; curriculum integration; mass communication and distribution problems). These were discussed in general sessions first thing in the morning, and illustrated by committee-selected examples shown at the final session the same night. The morning presentations by the three faculty

heads and their supporting panel members were data-laden and thought-provoking, and not in the least inhibited by too immediate relationship to the visuals shown later that evening. Because of the size of the audience, and its imbalance of professional status and diversity of theological viewpoint, there was no chance of consensus of evaluation, nor was this essential or even desirable.

But in the smaller seminars and work groups into which the group divided for the rest of the day active participation was the rule. Everyone had his chance to have his say and generally made good use of it. A good example was the "Production work group, in which producers (and later also distributors) on every level took active part. Large or small, denominational or "independent," modernist or fundamentalist, all contributed as they willed and partook as they wished.

The equipment exhibits followed traditional lines, with somewhat less organized incentive to learn the actual operation of equipment than in some previous workshops. The manufacturers' exhibits culminated on Sunday night in an "Equipment Fair" in which, operating in three sectors or waves, everyone on the grounds had a good chance to view all the exhibits. There followed a whole general session devoted to the A-V Industry's presentation of new developments, very much as had been the program in the very first Workshop. Three industry representatives did good individual platform jobs; but a coordinated, documented presentation of what the AV Industry, as a whole, has to offer the church field, as a whole, is an aim still to be realized.

Technological progress was well demonstrated, beginning with a 35mm color wide-screen feature film "Mark of the Hawk" (shown in the Campus Theatre, at Ripon, nine miles from the Assembly) and ending with a 16mm cinemascope presentation of "God Is My Partner," a 20th-Century-Fox release just starting its theatrical run. At the smaller, more intimate end of the scale were 16mm color-frames mounted in Viewmaster wheels and shown on a little plastic projector selling for less than \$10.

Next year's conference will be held at Pennsylvania State University, August 17th to 24th. There will be an opportunity to take college credit courses before or after these dates, as was the case last year at the University of Southern California. According to present plans in 1959 the conference will again be held at Green Lake, right after Labor Day.

WFK.

# New Filmstrips

Described and evaluated by **ROBERT CHURCH, WALTER PILDITCH, and HAROLD WARD.** Producers should send review copies of filmstrips to Robert Church, Audio-Visual Coordinator, Herman Felsenthal School, 4101 S. Calumet Ave., Chicago 15, Illinois.

## HANDWRITING

Visual Education Consultants, Inc., 2066 Helena Street, Madison 4, Wisconsin. Subject area is language arts. Filmstrip in black and white. Grade level from fourth grade to eighth grade. Total of 41 frames. Deals with cursive writing.

Depicts and portrays developmental stages of the alphabet, the *Mnemonic*-memory aids, *Pictorial*-pictures or pictograms of objects, *Ideographic*-symbols representing abstract things, and the *Phonetic*-symbols or phonograms representing sound.

Reasons why good handwriting is important, rules that aid in making one's handwriting clear and easy to read, and "helps" in writing some of the "tricky letters" are other assets of this filmstrip. Pamphlet accompanying filmstrip contains reprint of writing on frames, explanatory notes with various frames, and related activities for use before or after the filmstrip showing.

## SOCIAL SERVICE SERIES

Pocket Films, Inc., 505 Fifth Avenue, New York 5, New York. Subject area covers social service and general welfare. Interest level includes high school and general adult audiences.

**CHILDREN NEED PARENTS** (41 Frames - Black and White). The Children's Association of Finland provides an informative treatment of the problem of placement of children in situations where love, security, and feeling of home membership are integral parts of the placement program. Over one thousand trained "homefinders" are at work in Finland seeking placement on a long or short time basis for children who have no parents due to death or abandonment, or whose parents are ill and cannot care for them.

A basic part of the counselling plan is to orient a child to a "family unit" environment. This means in general a foster home placement in which the child becomes a part of the active life of the new home. Such placement permits contact with previous family members, parents, etc. Medical and dental care is performed by the agency which receives half of its support funds from the government and half from

private welfare groups and the payment of fees.

The study discussion guides provide the person presenting the text with background information on Finland and the need for the work of the placement agency.

**ACCENT ON ABILITIES** (73 Frames-Color). The theme of an "open door" and an "open mind" in making happy, self-sufficient, and contributing citizens out of persons with physical handicaps is developed through an active program carried out by Dictaphone Corporation.

The basic premise for such a program was a desire to want to work and an interest in being useful and productive. In 73 frames the story is told of how from a group of four employees in 1952 to 318 in 1956, an organization was built up to create products for sale on a competitive market. Experience in the program pointed out that handicapped workers performed with a lower accident rate and with a better attendance record than nonhandicapped persons in industry. To make a personnel program one of continuous development, every opportunity was given for open communications. Employees learned to do many jobs, were provided with artificial devices and aids to carry out their duties, and a total program of physical rehabilitation was tied in with a research program in plant engineering. Human experiences in making happy human beings, guidance counsellors will find the filmstrips helpful be it in secondary school or college, or in the armed services.

## ELF BOOK SERIES

Society for Visual Education, Inc., 1345 Diversey Parkway, Chicago 14, Illinois. Subject area includes reading readiness experiences. Filmstrips are in color. Grade level includes kindergarten and primary grades. Each of eight filmstrips includes a record for the narrative portion of the filmstrip. Running time is ten minutes each.

### FUN ON WHEELS GROUP -

1. JOHNNY, THE FIREMAN (57 Frames)
2. BUDDY, THE LITTLE TAXI (48 Frames)
3. CHOO-CHOO, THE LITTLE SWITCH ENGINE (43 Frames)
4. OUR AUTO TRIP (36 Frames)

The series is excellent for the kindergarten and primary grades. The

illustrations are quite sharp and perfect for smaller children because of the brightness in color. The vocabulary is within their reach and realm of experience. In addition to the very good art work and suitable vocabulary these filmstrips have a delightful musical background including sound effects. The strips can be used for additional work in science study and social studies. The stories are based on the Rand McNally Elf Books.

**ANIMAL FRIENDS GROUP —**

1. HIDE-A-WAY PUPPY (44 Frames)
2. CHESTER, THE LITTLE PONY (45 Frames)
3. THE LITTLE MAILMAN OF BAYBERRY LANE (45 Frames)
4. MR. BEAR'S HOUSE (51 Frames)

The filmstrip series, Animal Friends, contain adventures of animals dear to the kindergarten and primary aged children. The strips, The Little Mailman of Bayberry Lane and Mr. Bear's House, deal with the fictitious adventures of the animals in which they speak and act as humans. The strips, Hideaway Puppy and Chester, The Little Pony, place the animals in their natural environment, thus are more realistic. The series will appeal to imagination of the child as well as provide factual information. The pictures are clear and have good coloring without too many distracting details. The records (33-1/3 RPM) which accompany the strips are recorded in the language of the child. They prove a definite relief to the teacher's voice and provide variety for the children's listening. The musical background also provides interest. The filmstrips are quite instructional as well as entertaining.

**FRIENDSHIP FILMSTRIP SERIES**

Friendship Press, New York, New York. Subject area includes social studies. Filmstrips are in color. Grade level includes first through third. Printed script needed.

OUR WORLD OF HAPPY DIFFERENCES (63 Frames). This filmstrip is suitable for use in a social studies unit with children from six to ten years of age. No captions are printed on the frames thus making the child look for the particular difference being stressed in that particular frame. A script is supplied for the instructor and it makes the guidance easy and interesting. The color is stimulating. The strip could be well correlated with art projects and music. It is well edited to point out enjoyment through differences in colors, sights, sounds, taste, smells, and most of all, people.

## Poetry in Prose

"Poets don't describe the world more accurately, they create it more intensely," said Bergen Evans, in his discussion titled "Neither Rime nor Reason" contained in the immensely interesting and school valuable album "OF MANY THINGS" (The Spoken Word, SW-A2).

Bergen Evans, scholar and wit, probably is best known to students in our secondary schools as editor of questions on the television program "\$64,000 Question" and may be known to some as the moderator for the program "The Last Word" which deals with meanings and nuances of language. He is becoming known, too, as a lexicographer in that he has edited the recently published "A Dictionary of Contemporary American Usage" (Random House).

"Of Many Things" is a rare find which will delight instructors in English and in Speech in secondary schools and in colleges. It deals with a variety of subjects including "Phrase Origins" which will be heard with both pleasure and understanding by sophomore and older students in our secondary schools and which will encourage them to seek out and report common phrases and "slanguage," tracing these to their origins. On the subject of "Mark Twain" the commentator has much to say which mirrors his own pleasure in having known Samuel Clemens through many books. There is a short but interesting summary of Samuel Clemens' life and discussion of the lasting values of his work. Mark Twain's humor is explored as well as his hidden pessimism. But it is pointed out that Mark Twain is certainly accepted, as a writer of note, by both the general public and the highbrows.

The struggling writer, unhappy because the right phrase or choice of words does not fall automatically into type or come immediately to mind, will enjoy and profit from hearing Dr. Evans' discussion on "Some Revisions in Great Literature." Not only does he recall that there are seven authentic

versions of Lincoln's Gettysburg Address but he points out the amount of revising some authors undertake and recounts a series of such revisions which precede the final version of Keats' "The Eve of St. Agnes." Perhaps the young author will find solace in this constant effort to achieve a measure of perfection, and if he has been published at all, he may appreciate "The Function of the Critic" in which Dr. Evans stresses the constructive obligations of critical appraisal. Although the modern critic is expected to say, almost flatly, "this is good — or bad" as the case may be, his fundamental responsibilities to both reader and author are far different, according to the essayist and speaker.

Of the sixteen separate and distinct capsule lectures offered by Dr. Evans, more than half may have application in exciting English instruction in secondary schools. All have meaning for college instruction, and indeed, all will have significance to some high school students. In addition to those already too rapidly summarized, secondary school teachers are urged to hear and appraise Dr. Evans' comments on "Wit, Humor and Comedy," "Some Aspects of Shakespeare's Art," "Men and Their Myths," "Folk-Etymology," "Neither Rime nor Reason," and "Johnson's Dictionary."

In the first of this group Dr. Evans cleverly draws the comparison and contrasts involving "Wit, Humor and Comedy," discussing the distinctions, illustrating them and commenting on the cruelty of wit and its justification. Defending the schoolmasters, the commentator emphasizes reasons which have contributed to the original acceptance of Shakespeare by a critical English public and his modern acknowledgment as a master craftsman of the theatre. In "Men and Their Myths" Dr. Evans comments on some current figures and discusses in broad terms the "press agent" portrait drawn around individuals of note, speaking in detail of the personalities of both Hemingway and Lord Byron as men of letters around whom such auras of mystery and myth have been drawn.

"Folk-Etymology" is a self-explanatory title and a subject of great interest to teen-agers becoming aware of the meaning and diffinity of words. They will both enjoy and profit from this excursion, tangential as it may seem to formalists in curriculum matters, into the corruption of words through mistaken ideas concerning their origins or mistaken analogies with other words with which they are mistakenly confused or supposed to be related.

Discussing the nature of poetry, Dr. Evans stresses the fundamental contribution of the poet to the interpretation of the world we know, and that which our forefathers knew. The whole course and nature of lexicography was changed some two hundred years ago (1755) when Samuel Johnson's "Dictionary of the English Language" was published in London following nine years of arduous, sometimes seemingly hopeless, work involving not only defining and writing, but reading and study. Dr. Evans speaks about the present value of this monumental work under the sub-title "Johnson's Dictionary," gives an account of how the work was begun and accomplished and speaks of Johnson's plans and expectations. He relates humorous incidents relating to the book and after discussing some humorous definitions speaks (from personal knowledge) of the problems of definitions in any such work. This "side" alone can be most useful in introducing the dictionary as a tool for the student, far more than a mere colorless collection of definitions.

College students, as well as High School students, will profit from the listening experiences offered in this album. In addition to the titles already stated and too sketchily described are "The Humor of Sinclair Lewis," "Biography: Art of Science," "Old 'Nick' Machiavelli," "The Savage Indignation of Jonathan Swift," "Chaucer—The Last Civilized Man" and "The Responsibilities of Being Intelligent."

We believe that these recordings can be used profitably in instruction in the classroom and may well be introduced, studied and reheard in high school English classes. In addition, this album is a natural for both school and college libraries and listening centers, not to mention libraries intended for general public circulation. The album is a gem worthy of owning and enjoying many times.

## American Folk Music

Burl Ives has been recognized for many years as one of the leading modern troubadours, an artist of taste and

Many teachers are using these albums in classrooms and also recommending them for home study. Each ZODIAC album includes 3 unbreakable hi-fi 33 1/3 rpm LP records, together with the text and translation, delightfully illustrated.

## ZODIAC RECORDING CO., INC.

501 Madison Ave., New York 22, N. Y.

restraint who has contributed much to the renewed interest in American folk-music. Two of his recordings are worthy of consideration for use in social studies classes insofar as they mirror people and the problems of other times, in music classes for appreciation and in libraries for listening for relaxation. They are "BURL IVES SINGS FOR FUN" (Decca Records, DL 8248) and "CORONATION CONCERT" (Decca Records, DL 8080). The former contains such old favorites as "The Three Jolly Huntsmen," "The Erie Canal," "Old Dan Tucker," "Blue Tail Fly," "Let's Go Hunting," "Aunt Rhody," "Big Rock Candy Mountain," "The Boll Weevil" and "Gooper Peas." The "Coronation Concert" repeats one or two of these and includes some modern music ("Rodger Young" by Frank Loesser) which, while not a true folk-song, exhibits many of the same characteristics. This concert was recorded in London at the Royal Festival Hall and demonstrates not only the artistry of the man as a troubador, but also his abilities as a showman as he draws the audience into participation as a part of the performance.

Burl Ives' performance of "Gooper Peas," the Civil War soldier's song relating the difficulties of the southern soldier, interested us because there are many comparisons and contrasts which can be drawn with Frank Luther's presentation of the same song on the disc "SONGS OF THE NORTH AND SOUTH" (Decca Records, DL 8093). This recording is precisely what the title indicates and contains nineteen songs of the North and seventeen songs of the South representative of the feelings of men during the War Between the States. Frank Luther is joined by Zora Layman with the Century Quartet in this performance which includes "Battle Cry of Freedom," "We Are Coming, Father Abraham," "Tenting Tonight on the Old Camp Ground," "When Johnny Comes Marching

Home Again" and the "Battle Hymn of the Republic" to mention a few of the Northern songs as well as "Maryland, My Maryland," "Eating Goober Peas," "All Quiet Along the Potomac Tonight," "The Bonnie Blue Flag," and "A Life on the Vicksburg Bluff" to select a few of the Southern titles. Applications of this recording to instruction are immediately obvious and alert teachers will grasp the opportunity to portray the emotional characteristics of the time through this device. And of course they can draw parallels between the opposing armies of the men then, and the attitudes, fears and prayers of soldiers today—and in any conflict.

by ROBERT E. SCHREIBER

**NEW EQUIPMENT**

For more information about any of the equipment announced here, use the Readers' Service Coupon on page 560.

**CAMERAS: Movie**

**Bell & Howell 8mm Camera with Automatic Exposure** \$169.95. The energy from solar or light rays has been harnessed to set the lens of the new Electric Eye camera. Current is transmitted directly from the photoelectric cell of the exposure meter to a mechanism controlling the lens iris. Operates the iris through the full range of stops from f:1.9 to f:16 in less than one second—in sunlight or artificial illumination. Spring motor operates camera through 10 feet of film. Lens may also be set manually.

For more information circle 101 on coupon

**Bell & Howell Model 240EE 16mm Camera.** \$329.95. Spool-loading electric eye movie camera. Exposure is automatically adjusted by an electric eye which actuates a battery-operated motor which, in turn, rotates the lens iris to the proper position. Completely automatic threading. 100-foot film capacity. Speeds from 8 to 48 frames. Runs about 80 seconds on one winding at 16-frame (standard) speed. Lens is 20mm f:1.9 type.

For more information circle 102 on coupon

**Heitz Camex-Reflex 8mm Camera** \$269 with Cinor 12.5mm f:1.9 lens. Unique optical system, incorporating a mirrored prism in exact synchronization with the camera shutter, renders a strikingly brilliant aerial image in exact lifesize. Parallax is completely

eliminated for absolutely critical focusing. Runs 8 feet to the winding. Knob for continuous, regular, or stop-motion operation.

For more information circle 103 on coupon

**Heitz Camex 8mm Camera with Zoom Lens** \$539. The Pan-Cinor 17.5-70 mm lens f:2.4 is fitted to the 8mm single lens reflex movie camera, allowing continuous through-the-lens viewing and focusing, while changing the focal length and filming without extra finders. Lens alone sells for \$339.

For more information circle 104 on coupon

**Wollensak 8mm Cameras** \$149.50 & \$99.50. The "73" is a 3-lens turret camera equipped with a 13mm f:1.8 lens in fixed focus plus conversion units that rotate into place to form a 9mm f:1.8 wide angle or a 32.5 f:1.8 telephoto lens. Will not operate unless turret is in proper position. The "72" is a single-lens model. Both models have five speeds, built-in filters, fool-proof magazine load.

For more information circle 105 on coupon

**CAMERAS: Movie Accessories**

**Animation Equipment Oxberry Master Optical Printer.** Among the fifteen major design improvements are superimposition device and reticle, automatic dissolve, condensing system, projector head, lens mount, extension bellows, lens and camera travel, drive mechanism, stop-motion motor, position indicator, and flip-over counters.

For more information circle 106 on coupon

**Apex Picto-Scope Lens** \$75. For taking or projecting anamorphic 8 or 16mm motion pictures, compatible with CinemaScope. Models for zoom lenses and 35mm applications also available.

For more information circle 107 on coupon

**Camera Equipment Stop Motion Motor for Arriflex.** An efficient, small two-speed motor provides for either 1/2 or 1/4 second exposure. A simple pull of a knob quickly makes the interchange. Built-in Veeder Counter indicates frames exposed. Operates forward and in reverse.

For more information circle 108 on coupon

**Heitz Apochromatic Lenses for 16mm Cameras** \$269 to \$499. Correction of all primary colors and in sizes from 12.5mm up to 500mm (20 power). Lanthan glass has exceptionally high refractive power. Tight-locking C-mounts.

For more information circle 109 on coupon

**Paillard Bolex Camera Case** \$89.50 Omnibolex case takes any Bolex H cameras with zoom lens or three turret-mounted lenses, and special grip. No dismantling necessary.

For more information circle 110 on coupon

**Photo Materials Premier Versatile Titler.**

Designed to accommodate the new turret cameras whose lenses are not removable and where the focal length of the lens varies from 10 to 13mm on 8mm cameras and 20 to 26mm on 16mm cameras. In addition to lens holder and auxiliary lens, package contains 8 colorful title cards and complete mounting equipment for all home movie cameras.

For more information circle 111 on coupon

**Sylvania Radio Frequency Lamp for Color Printing.** Permits high-speed optimum-quality printing of colored motion picture film without the addition of costly optical or filter systems. Said to make possible highly improved performance by every existing printer after low-cost conversion.

For more information circle 112 on coupon

**CAMERAS: Still**

**Canon "L-1" 35mm Camera** \$259 with 50mm f:2.8 lens. Features single-stroke trigger for film transport and rapid-sequence shooting, exclusive film rewind knob with pull-up lever for speedy operation, 3-positional view-rangefinder window, shutter speeds to 1/1000th second, built-in synchronization of flash, interchangeable lens mount.

**Heitz Swiss View Camera** \$599. The Sinar Standard 8x10 features front and rear frames which offer extremes in swings and tilts, rapid tightening

## The KEYSTONE Overhead Projector

is really a

## MULTI-PURPOSE Projector

usable for:

Standard (3 1/4" x 4") Lantern Slides.  
Tachistoslides (4" x 7"). 2" or 2 1/4" Slides.  
Strip-Film. Micro-Slides.

It's a Real Daylight Projector — the lens system concentrates the light over a relatively small area, so that clear, brilliant projection is attained.

Is is small and light — weighs less than 20 pounds. Versatile and efficient.

Our Local Representative Will Demonstrate Upon Request.

**KEYSTONE VIEW COMPANY, Meadville, Pa.**

Since 1892 Producers of Superior Visual Aids

controls and leveling gauges; complete frame collapsibility permits use of extreme wide angle lens. Vignetting prevented. By changing back and bellows, Sinar 8x10 may be converted into a 4x5 or 5x7.

For more information circle 116 on coupon

**Konica Aerial Motorized Camera** \$650. Designed for rapid-fire aerial photography, the exclusive motorized mechanism permits 10 successive exposures within 15 seconds. Uses 120 film and has a 135mm f:3.5 fixed focus Hexanon lens; diaphragm closes down to f:22. Shutter speeds from 1/50th to 1/400th second. Large window sports-finder.

For more information circle 117 on coupon

#### CAMERAS: Still Accessories

**Admiral Photo Snip/Snap Slide Mounts** \$1.69 for 20. Plastic mount snaps over the slide in ten seconds; weigh less than glass mounts. Adequate slide identification.

For more information circle 118 on coupon

**American Speedlight Studio Camera Stand** \$295 including fixed stud with 1/4-20 threaded mounting screw. An all-metal, counterbalanced, bi-post stand, it is intended for professional and institutional photo and movie use.

For more information circle 119 on coupon

**Canon Lenses in New Mounts** \$145 for the 28mm f:3.5 in featherweight lens with positive infinity lens lock and focusing lever; \$115 for the 35mm f:2.8 lens.

For more information circle 120 on coupon

**Canon 135mm F:2.5 Telephoto Lens.** Features a unique reflex housing with a focusing system that utilizes grating focusing glass in combination with a fresnel lens. Handy lever renders 3x or 6x magnification of the image for critical focusing.

For more information circle 121 on coupon

**Eastman Magazine-Loading Rotary flashholder** \$9.95 and \$11.95. Bulbs are carried in a polyethylene carrier disc which is slipped directly into the turret-type magazine and locked in firing position with a push-pull switch. Bulbs are rotated into position manually. One contact prevents mass firings. Type 1 for Kodak Signet 40, Duaflex IV, and similar models; Type 2 fits most other cameras. Supplied with shoe fittings, universal bracket, and connector card.

For more information circle 122 on coupon

**Eastman's Versatile Brownie Star Cameras** \$8.50 and \$9.95 eye-level finder and hooded waist-level models. Moving a lever changes the camera optical system from the position for making black-and-white snapshots to that for color slides or prints, using Ektachrome 127 film. \$8.50 model accepts midget flashbulbs. Other model may be used with matched flashholder \$3.50.

For more information circle 123 on coupon

**Exakta Meyer Wide Angle Lens** \$59.50. The 4-element lens was designed for the photographer who desires a medium-speed wide angle for shooting pictures in narrow areas and for covering large areas that are beyond the ability of the normal lens to record. Offered at a speed of f:4.5 and a focal length of 35mm. Takes series 8 filters and adapters. Weighs only 6 ounces.

For more information circle 124 on coupon

**GE Mascot II Exposure Meter** \$9.95. The direct-reading meter is no larger than a cigarette lighter but performs capably within ASA accuracy standards.

Direct-reading scale for both f-stops and EVS; setting for movie cameras at 16, 24, and 48 frames per second.

Leather case available.

For more information circle 125 on coupon

**Graflex BC Flash Unit** \$7.95 Lightweight plastic body and polished aluminum reflector. Accepts bayonet base flash lamps with push-button ejection. Battery-capacitor type flash system uses 22 1/2 volt photoflash battery. Mounts directly on cameras with shoe-type contacts.

For more information circle 126 on coupon

**Graflex Lightweight Electronic Flash Unit** \$64.50 for power pack and lamphead; accessory 15-foot AC cord \$3.95. The Strabomite operates on four photoflash D-cell batteries providing 100 flashes. Also operates off standard 110 volt current. Unit weighs about 3 lbs. Adjustable mounting clip.

For more information circle 127 on coupon

**Heitz Alpha Makro-Kilar Lens** \$266.45. The 90mm f:2.8 lens has an extreme

helical extension for an uninterrupted focusing range from infinity all the way down to 8" without any accessories. Preset diaphragm with stops from f:2.8 to f:32, built-in lens shade.

For more information circle 128 on coupon

**Heitz Alpha 100mm Apochromat Lens** \$299. The f:2 lens is constructed of six precision-ground rare earth elements correcting all primary colors and rendering highest contrast and fine definition to the edges even at full aperture. Preset diaphragm and equidistant clickstops for full and half values.

For more information circle 129 on coupon

**Heitz Alpha Telephoto Lens with Automatic Diaphragm** \$159. Tele-Xenar 135mm f:3.5 with auto-diaphragm is constructed with elements of high refractive optical glass; allows focusing at full aperture and photographing at any small stop.

## Scratches on Film

### Irritate Audiences

Scratches are havens for dirt, and refract light improperly. On the screen, they mar the picture and may distract attention. If on the sound track, they produce offensive crackling.

Fortunately, scratches can almost always be removed — without loss of light, density, color quality, sound quality, or sharpness.

# SYLVANIA CERAMIC BLUE TOP

PROJECTION LAMPS... for all makes... all types... in all sizes

Use a Sylvania Ceramic Blue Top in your projector... your slides and movies deserve the best!

New Sylvania Ceramic Blue Tops are available in all standard sizes for any projector... to fill your exact requirements for clear, brilliant projection.

**Blue Tops offer these superior qualities:**

**Brighter**... Ceramic Blue Tops won't scratch, chip or peel like ordinary painted tops... machine-made filaments assure pictures bright as life.

**Cooler**... Ceramic Blue Top is bonded to the glass for improved heat dissipation... cooler operation assures longer lamp life.

**Longer Lasting**... Exclusive Sylvania shock-absorber construction protects filaments from vibration damage.

## GUIDANCE

**Borderline** mp MH 27min sd b&w \$125. Story of a teen-age girl who is on the "borderline" between useful citizenship and delinquency, pointing up some of the problems of emotional adjustment confronting many adolescents in their striving toward maturity. Deals provocatively with two common parental problems, guidance vs. discipline.  
For more information circle 178 on coupon

**From Ten to Twelve** mp MH 26min sd b&w \$140. Recent addition to the "Ages and Stages" series, film presents an absorbing study of how the physical and emotional development of children of these ages manifests itself in their behavior and their attitudes toward their parents, teachers, and each other. In the Jones family we observe the problems of discipline, guidance, and understanding that confront most parents.  
For more information circle 179 on coupon

**Not by Chance** mp NEA 28min sd col \$275 b&w \$175. Current practices in teacher education, such as admissions, classroom instruction, campus life, guidance activities, observation, and directed student teaching depicted in following the preparation of Donno, a prospective teacher of high school science. Shows a highly skilled, understanding, and professional teacher at work in the opening sequences.  
For more information circle 180 on coupon

**Six, Seven, and Eight-Year-Olds** mp NYU 27min sd b&w r\$7.50. Demonstrates age at which spirit of independence and age at which preference for one's own sex develops. Produced by Vossar's Department of Child Study.  
For more information circle 181 on coupon

**The Teens** mp MH 26min sd b&w \$140. Latest in the "Ages and Stages" series, shows the normal behavior of three teenagers in the everyday life of an urban middle-class family. Shows

# Check these 10 points in selecting 16 mm sound projectors

QUESTION	WHY THIS IS IMPORTANT
1 Does it have color-coded threading?	<input type="checkbox"/> Makes threading and operating fast and simple, even for beginners.
2 Does it have safety film trips?	<input type="checkbox"/> Stops film movement instantly in case of film emergency. Guards against costly film damage.
3 Does it have Hi-Lite optical system?	<input type="checkbox"/> In connection with Mark II shutter, throws 38% more light on the screen. Assures bright pictures even in hard-to-darken rooms.
4 Does it have stationary sound drum?	<input type="checkbox"/> Assures clear, smooth sound. Has no moving parts to get out of adjustment. Scans full sound track.
5 Does it have visible one-spot oil system?	<input type="checkbox"/> Transparent filling tube shows oil level. Reservoir automatically feeds oil to all points as needed.
6 Are both reels mounted on top of projector?	<input type="checkbox"/> No overhanging reels to present a "traffic hazard." Projector can be set up on any level surface, even the floor.
7 Does it have single drive sprocket?	<input type="checkbox"/> Eases film stress, because same sprocket controls film entering and leaving projector.
8 Does it have compensating film shoes?	<input type="checkbox"/> Automatically adjust themselves to varying film thicknesses. Guard against splices catching.
9 Does it have 180° swing-out lens?	<input type="checkbox"/> Facilitates threading and cleaning of both aperture and film channel.
10 Is it adaptable for magnetic recording?	<input type="checkbox"/> Complete magnetic recording on film and playback can be added at any time by simply connecting Victor Magnesound.

## ONLY VICTOR OFFERS SO MANY IMPORTANT FEATURES

The above 10 points give a quick picture of the advanced features you should expect in a modern 16 mm sound projector. Only a Victor brings you *all* of them. And with every Victor you also get the "standard" features of all quality sound projectors, including 2 speeds for sound and silent film, still picture, and reverse projection.

Particularly important is Victor's new red, white and blue color-coded threading. Color lines on projector clearly show where to thread and the sequence of threading. Other time-proven features—exclusive with Victor—are safety film trips, top-mounted reels, and power rewinding with no change of belts or reels.

Victor was first to develop 16 mm projectors and through the years Victor has been first to perfect improvements that assure finest pictures—finest sound—easiest operation. Victor long has been the choice of A-V experts in 73 countries.

**Victor Assembly 10** — Lightweight projector for small audiences. Amplifier operates at 10 watts continuous output, 18 watts peak. Available with 9" speaker, top-mounted and fully baffled—or separately cased 12" speaker as shown.

### NEW VICTOR VIEWER

The first professional 16 mm viewer with "frame counter" priced under \$100. Large 3' 1/4" x 4' 1/4" screen is brilliantly lighted by 75-watt lamp. Equipped with f2.8 triplet lens. All optics coated.

## RCA "LIFE-TESTED"\* 16mm Projectors scoop the field

### *with great new design advances!*

**FEATURING** great new **BUILT-IN LUBRICATION!**  
No more lubrication needed for the life of your RCA Projector. Oil-impregnated sintered metal parts run quietly as a cat hundreds and hundreds of hours.

**FEATURING** great new **LONG LIFE FILM PRESSURE GUIDES!** Nylon sprocket shoes and synthetic-sapphire pressure shoe treat film with wholly new light touch, protect it from wear at all critical contact points in film path.

**FEATURING** great new **BOOST IN LIGHT ON SCREEN!** RCA Projector is first *designed* for use with new 1200-watt lamp. Higher-power blower rotor moves more air to keep aperture and mechanism cooler, assuring complete film safety. Optional two-bladed shutter adds another 40% light on screen for brightest picture ever.

**FEATURING** great new **WEAR-RESISTANT CASE!** Surf-green fabric case takes more scuffing and abrasion and shows it less than any standard case in use today. It's twice as resistant to ordinary wear.

Remember these great new RCA "LIFE-TESTED" features. With them, you'll all but forget maintenance for your projectors. And of course RCA Projectors *still* thread easiest of any 16mm machine. In fact, their distinctive new surf-green finish makes for even simpler threading and operating in darkened rooms. The same superlatively clear, RCA-engineered sound is yours, too.

See and hear how far ahead of the field you'll be with the great new "LIFE-TESTED" line of RCA 16mm Projectors. Ask your RCA Audio-Visual Dealer about the powerful two-case RCA Senior, the compact RCA Junior. Their "LIFE-TESTED" features can be *yours* today!

\*Rigid endurance standards have been set for RCA "LIFE-TESTED" Projectors. Individual components as well as finished projectors are subjected to continuous testing to evaluate the durability and efficiency of all operating parts. "LIFE-TESTED" at RCA means better, more reliable performance from RCA projectors.

Tmk(s) ®

## **RADIO CORPORATION of AMERICA**

EDUCATIONAL SERVICES

CAMDEN 2, N.J.

**NEW UNIGLOW FABRIC**—Completely smooth, unbeaded, seamless, mildew proof—gives new sharpness and peak brilliance to twice the viewing area.

**NEW ALL METAL ROLLER**—With safety lock, prevents tearing fabric from roller. Permits tensioning of fabric to provide wrinkle-free surface.

**NEW FLUSH-FITTING SLAT BAR**—Fabric is fitted into metal slat bar that snugly fits into screen case—prevents tearing or scuffing of fabric when screen is not in use.

**NEW LEATHERETTE COVERED SCREEN CASE**—Attractive plus leatherette won't scuff or mar, cannot be scratched or peeled. Increases effective use of screen.

# FOUR GREAT IMPROVEMENTS make the new RADIANT "EDUCATOR" the ideal Projection Screen!

You add new brilliance and increased audience enjoyment to your A. V. Program—when you use the new Radiant "Educator" with Uniglow. Your pictures look better—brighter, sharper, with truer colors and larger "good viewing" area. Set-up and dismantling time is cut to seconds. Your screens give longer, more satisfactory service—with new protection against tearing fabric from roller, with new protection against scratching, marring and scuffing.

## SEE IT FOR YOURSELF

# Breaks through LEARNING barriers

## ...speeds understanding

You'll be amazed at how much faster... how much more thoroughly... your students can absorb new information when you enlarge your reaching scope with this Bausch & Lomb Balopticon® Projector. So versatile that your imagination sets its only limits! With this one instrument you can project big, brilliant, sharply detailed images of:

- **SLIDES**—student-made or commercial.
- **OPAQUE OBJECTS**—drawings, photographs, pages of books or magazines, science specimens, maps, students' schoolwork, etc.
- **FILM**—commercial film strips or individual frames (Film projection attachment optional).

Help your students learn better by helping them see and understand better with a Bausch & Lomb Balopticon Projector.

**BAUSCH & LOMB OPTICAL CO.**  
80122 St. Paul St., Rochester 2, N. Y.

Yes, I'd like an obligation-free demonstration of B&L Balopticon Projectors.

Please send me Balopticon Catalog E-11.

# On the SCREEN

## Cover: "To Each A Gift"

The true Spirit of Christmas is dramatically told in a new film for the Christmas Season from "This Is the Life." It is a period picture from the turn of the century that tells the heart-warming story of how love and understanding bring Christmas to a family of Swedish immigrants. The film is produced by Concordia.

## Apology to RCA

It is with the deepest regret that we have to announce an error in the Radio Corporation of America ad that appeared on the inside front cover of the November issue of Educational SCREEN. Instructions were to run the ad in black and GREEN... (not RED as was shown), since part of the new design of their projector involved a fresh, new color styling in surf-green, the projector was to be pictured in green.

Our apologies to the RCA people — you will find the advertisement of their new projector in its proper green color on the inside front cover of this issue. The Editor.

## Year-End Summary

A magazine's year-end issue marks a proper time and place for a summary — of where we've been, where we are, and where we think we're going. In this issue, in addition to our customary BLUE BOOK collation of the year's production of instructional materials, we offer a series of short year-book type summaries dealing with specific areas served by these materials.

To get these summaries in the relatively short time available, our editors turned, naturally, to a primary source in each field. In most instances this source was "commercial." Our article on filmstrips is by a qualified professional educator, who, however, is not without former commercial qualifica-

tions. An article on the production and sale of university-produced materials did not meet deadline — given more time we hope to do better next year. That is, if this type of review treatment meets with the approval of our readers.

This is no sputnik-launching idea. It follows the pattern, on a very modest scale, of the annual year books put out by veteran trade publications. The *Film Daily's Yearbook*, for instance, is an invaluable review, work book, and permanent repository of history in the making. We are but doing what every major magazine and newspaper of note will be doing in their final issues as the year comes to a close.

It is not easy to write a fully objective, comprehensive summary of one's field, or even of one's own production, in 800 words or less, under the pressure of an all-too-short time limit. If the year-book idea is repeated (and possibly expanded and improved) next year the authors will be enlisted early enough so they can be on the lookout for material and ideas, far in advance of deadline.

We extend our appreciation to our good friends who wrote these summaries on short notice, and our apologies to the many others who would have responded in the same spirit had they been asked. Perhaps some of them will be, when the time comes to plan a 1958 yearbook issue.

## 32nd Edition of the Blue Book

The Blue Book section of this issue, beginning on page 593 is a review of new materials made available during 1957 and is based on announcements received from releasing organizations throughout the year and published in previous issues of Ed Screen. It presents a handy and compact source of year-round reading and reference, compiled in the order following:

(1) Subject Index to Materials (page 593) lists alphabetically the subjects you are interested in.

(2) Listings of Materials (pages 594-626) describes, classifies and indexes films, filmstrips, slide sets, recordings and other A-V materials of 1957.

(3) Index to Producers and Distributors (page 627), arranged in alphabetical order. This index gives addresses of the producers and primary distributors referred to in the listings of materials.

# LEVOLOR SKYLIGHT BLINDS ELIMINATE DANGLING CORDS

**STANDARD SCHOOL WINDOW POLE CONTROLS TILT IN EITHER DIRECTION**

There are many advantages in having a skylight dome on your school to allow a natural entrance of sunlight. One disadvantage, however, has been annoying, dangling cords.

Levolor Skylight Venetian Blinds enable the instructor to change the room from maximum light to a soft diffused light—or optimum darkness—in a matter of seconds *with a simple twist of a window pole*. Installed to Levolor specifications, these blinds will sustain better than 200 pounds.

Another method of controlling overhead daylight is by installing *motorized* Levolor Skylight Venetian Blinds with push-button control. This is undoubtedly the most desirable method for Audio-Visual purposes.

For full details and specifications of the Levolor Skylight Blind, window pole control or motorized, write to LEVOLOR LORENTZEN, INC., A.V. DEPT., 720 Monroe St., Hoboken, N. J.

Be sure to specify

# SELECTING MATERIALS FOR INSTRUCTION

A few years ago the selection of audio-visual materials for instruction was no problem at all. Within the memory of av workers who are still working, the procedure was as simple as this: If teachers needed a motion picture in relation to their unit of study on Alaska, you looked in the Eastman Classroom Films catalog to see if an Alaska film had been produced. If one was listed, you bought it. If one hadn't been produced, you went without.

We refreshed our memory of who was producing what by reviewing the ads of the producers in the EDUCATIONAL SCREEN issues of the early thirties. Eastman was THE source for classroom motion pictures. For filmstrips you turned to the Picturol catalog of the Society for Visual Education. If it was lantern slides and stereographs you were looking for, the search, for all practical purposes, began and ended with the catalog of the Keystone View Company. The problem of selection then was no problem at all. Anybody could do it.

But today! Just a glance through the pages of this annual Blue Book issue of SCREEN & GUIDE shows the dimensions of today's selection problems. More audio-visual materials are now produced *each year* than the total in existence twenty-five years ago. For every topic in the curriculum there is a wide variety of excellent materials from which to choose. Schools and school systems are faced with a formidable problem that is becoming increasingly complex in determining first how to choose, then selecting, those materials to be made readily available for their teachers to use.

One school system we know about has synthesized its experiences in dealing with the problem of selection of materials. They have worked out a clear cut statement of "Guiding Principles" to govern their materials selection procedures. *Some* of the principles they evolved seem worth repeating here:

... The single, most important objective in all selection procedures is to locate and make available for teachers and pupils the *best* materials that can be found to help in reaching the teaching objectives set forth.

- ... Selection of instructional materials should be based upon the judgments of those who are to use them.
- ... Group judgments are superior to individual judgments.
- ... Teacher judgments are best when they are based upon actual experience in using the materials in classroom situations.
- ... Selection of instructional materials should be closely coordinated with ongoing curriculum development work.
- ... Lists of approved and recommended instructional materials should be under constant revision to assure up-to-dateness. Normally, no approval or recommendation should be for a period greater than five years.

These working principles that guide the selection procedures of one school system provide no automatic measuring device. There is no simple and easy way to find the *best* audio-visual materials. What's best for the instructional program of one school is not necessarily best for another. The task of selection is one of getting reliable judgments about the probable instructional effectiveness of the materials that have been produced in relation to the instructional objectives to be achieved.

The pages of this special issue of EDUCATIONAL SCREEN AND AUDIO-VISUAL GUIDE give you the accurate data about the audio-visual materials that have been produced in recent months. There's one way for you to use this information so that it will *insure* the continued production and the expanded production of excellent and useful audio-visual materials. Write to the producers, preview their materials, evaluate, select, and then BUY the materials that are best for your instructional programs. The more audio-visual materials are used by teachers the more materials there'll be for teachers to use.

*Paul C. Reed*

# Imagine Leonard Bernstein teaching a class for you!

It's possible on Columbia Records! "Leonard Bernstein on Beethoven" is a masterful demonstration of the development of Beethoven's Fifth Symphony. Or imagine the great American poet, W. H. Auden reading Elizabethan verse to your English class. Think of your junior scientists discovering the strange and marvelous possibilities of the acoustical world with all the facilities of a mammoth sound studio! They're all in the Columbia Records catalog. What could make your classroom more interesting! Your subjects come alive; your teaching is at its most truly creative! And Columbia's Guaranteed High Fidelity assures absolute reproduction of all the nuances of performance... perfect balance with full attention to the finest detail. On Columbia Records, the "Sound of Genius" brings you the world's greatest performers creating the world's greatest music.

**COLUMBIA'S COMPLETE NUMERICAL CATALOG** with monthly supplement service is now available to teachers and librarians for the first time. The low cost of this service also entitles you to all subsequent mailings of music teaching aids and announcements of important new materials. Fill in the attached coupon and mail it today. Do not send cash.

These listings are the barest indication of the wealth of provocative and stimulating material available in Columbia's comprehensive educational catalog.

**STRANGE TO YOUR EARS**—Physics, science and music teachers will find this record an invaluable illustration of what happens to familiar sounds when their recognition factors (pitch, timbre, etc.) are altered by modern electronic and tape recording devices. **ML 4938**

**ELIZABETHAN VERSE**—Poems by Frances Davison, Ben Jonson, Thomas Campion, Edmund Spenser, Sir Walter Raleigh, John Donne and anonymous poems. **AN EVENING OF ELIZABETHAN VERSE AND ITS MUSIC**—by Thomas Weelkes, Robert Jones, John Wilbye, Alfonso Ferrabosco, Thomas Morley, George Kirbye, John Dowland, Orlando Gibbons, John Ward and Thomas Tompkins. W. H. Auden (reader) and the New York Pro Musica Antiqua, directed by Noah Greenberg. **ML 5051**

**LEONARD BERNSTEIN ON BEETHOVEN**—Leonard Bernstein looks at Beethoven's rejected sketches for the first movement of the Fifth Symphony and demonstrates with orchestral illustrations how this work would have sounded had they not been rejected.

**BEETHOVEN: Symphony No. 5 in C Minor, Op. 67**—Bruno Walter conducting the New York Philharmonic. **CL 918**

**WHAT IS JAZZ**—Leonard Bernstein looks at jazz with the assistance of several of its leading exponents, among them Buck Clayton, Bessie Smith, Miles Davis, Teo Macero, Louis Armstrong and Buster Bailey. **CL 919**

**SONGS OF CHRISTMAS**—The Norman Luboff Choir. **CL 926**

**THE STINGIEST MAN IN TOWN**—Based on Charles Dickens' "A Christmas Carol." **CL 950**

**THE LITTLE STAR OF BETHLEHEM**—(story of Paul Tripp and music by George Kleinsinger). **THE TOY BOX** (Ballet Suite) by George Kleinsinger. **CL 1046**

The following listings represent a portion of the material available on the **HARMONY** label. It's a Columbia product made with the budget in mind! List price on the **HARMONY** record is only \$1.98!

**BACH: Six Brandenburg Concerti**—Vols. I, II, & III. Fritz Reiner conducting soloists and chamber orchestra. **HL 7062, HL 7063, HL 7064**

**OFFENBACH: Gaité Parisienne**—Ballet  
**CHOPIN: Les Sylphides**—Ballet.  
Efrem Kurtz conducting the Columbia Symphony Orchestra. **HL 7065**

**POPULAR OVERTURES AND DANCES:**  
Howard Barlow conducting the Columbia Broadcasting Symphony. Selections from Suppé, Sibelius, Moussorgsky, Tchaikovsky, Rossini and Smetana. **HL 7066**

All prices are suggested list.

## COLUMBIA PHONOGRAPHS

### High Fidelity Manual Portables

HF-1

HF-2

Both models HF-1 and HF-2 are noted for excellence of sound reproduction. Their sturdiness and portability make them ideal for classroom, library and auditorium use. The units play all speeds, have built-in 45 rpm adapters; both are equipped with two jeweled styl and powerful amplifiers. Speakers and 30-foot extension cord are housed in detachable lids. HF-1 has two 6" speakers; deluxe model HF-2 has two 8" speakers, microphone with separate fading control for P.A. system use, and storage space for EP-1 (earphone attachment), as well as input jack for use of tuner or stereophonic system.\*

## That Bring Big Results With Filmstrips

by Mary Mainwaring

Audio-Visual Director  
Chicago Teachers College  
and  
Wilson Junior College

Remember when filmstrips were always called slidefilms and you could get a blistering burn if you touched the lamp housing of a projector? Filmstrips have been used as instructional materials for about thirty years, slides even longer, and 1957 has brought their popularity and value to a new peak.

Among the factors in teachers' satisfaction with projected still pictures, whether in strips or slides, has been the improvement of projectors. The new ones are sheer pleasure to use. When we demonstrate them to teachers and student teachers in our Center there is a quick reaction — "Let me do it!" Not for weeks have we heard, "No, thanks, I'm not mechanically inclined."

Another point in favor of filmstrips and slides is that ubiquitous factor, portability. On those days when all the audio-visual carts are loaded with fish tanks, plants and the maintenance men's tools, you can put the materials in your pocket, carry the projector with one hand and a screen with the other. When you reach your classroom it takes about one square foot of space and one minute of time to set up the projector.

And then? The projector runs just as fast or slowly as you want it to. The sound filmstrip with a record will set its own pace, true, but most strips today have brief printed captions and let you and your pupils provide the commentary. Here is a truly flexible medium for instruction. There is no predetermined running time and you can use as much or as little of the strip or slide set as you choose.

The graphic arts, like projector manufacture, have reached new levels of quality. Today the artwork, photography and color reproduction in filmstrips and slides are usually excellent.

It was not always so, but in 1957 we take the best for granted and need not settle for less.

The mechanics of still projection are indeed well in hand, but what of content? We have the medium for visual communication, but what's the message? The message is, "Here is your world and its knowledge, from prehistoric times up to now." It would be difficult to name a topic, a subject area, or a story that has turned up in a school curriculum that has not soon thereafter been rolled up in a filmstrip can. There is an embarrassment of riches, a multitude of good things in these small packages. Prehistoric animals? Greek mythology? The Roman Empire? The Medieval World? Decimals? The weather? Animals, any kind? Architecture? American History? This month's headlines? All this and more!

Thus another advantage in the use of filmstrips and slides is wide coverage of subject matter. The topics have the further value of being presented in a related series of materials, and often in a series of series. This allows — even encourages — study in depth.

Recent production of filmstrips and slides has proliferated the instructional materials for all levels, from the primary grades through college. All these materials serve many viewers, and they are inexpensive. They come in small packages, and they are very good.

In arithmetic, among other fine filmstrips, are the several series for "Using and Understanding Numbers" designed by Joseph Urbancek and

produced by the Society for Visual Education. There are projected materials for art study in every grade, beginning with the "Art in Our Classroom" primary series and "Classroom Art for Middle Grades" series from Encyclopaedia Britannica Films, and continuing with "Adventures with Art Materials" and "Art and the Crafts" series from SVE. For art classes at the college level splendid slide sets are available from Dr. Konrad Prothmann, and both slides and filmstrips from the Herbert E. Budek company.

Guidance filmstrips for the primary grades have been produced this year by both Encyclopaedia Britannica Films and the Society for Visual Education. Eye Gate House and Filmstrip House have brought out filmstrip series about holidays. The language arts have been well served by many producers. Notable are the "Myths of Greece and Rome" and "Your School Publications" from Jam Handy, and "Guideposts to Speaking and Writing" from Filmstrip House.

The sciences and social studies have been so enriched by recent filmstrips and slides that it is almost impossible to cite particular sets and series. Yale's "Pageant of America" series of thirty filmstrips is so remarkable that it must be mentioned as one of the great achievements of this year. Yet this should not obscure the continuing excellence of the New York Times filmstrips, which are always well done. For both of these fine series the teacher's guides are especially valuable.

"1 bunny and 1 bunny are how many bunnies?" Frame from the SVE filmstrip produced by Joe Urbancek, Audio-Visual Editor of Chicago Schools Journal, Chicago Teachers College.

# Film Production Trends

## Educational Film Spectaculars Initiated in 1957

Coronet released sixty-five new educational films during 1957, each available in either color or black and white. These new films covered a wide range of subjects in the curriculum. More significantly, they were divided appropriately among three principal areas—19 films for primary grades, 19 for intermediate grades, and 27 for junior and senior high schools.

This production program represents a continuous effort to develop a curricular balance in films, a goal established with the inception of the com-

By Ellsworth C. Dent

Vice-President, ESQUIRE, Inc.

costumed actors, and a wealth of authentic sets and backgrounds—in effect a high point in the production of educational films. Each represents a large investment by Coronet in research and production, but is available to schools at the usual prices for prints in color or black and white. The purpose of this program is to

Coronet series; five in American history make 26 in the U. S. history series; while eight in literature bring to 8 the films in American Literature and to 12 those in English Literature. In the field of geography, seven new releases make a total of 62 films—all for intermediate grades—and the most complete and up-to-date group available. More films in the area are scheduled for 1958 release.

An unusual film in animation was another highlight of the year's production program—*Grammar: Verbs and Ways We Use Them*. Lively and entertaining figures illustrate a number of important grammatical concepts. The use of animation injects new life into a conventionally dull subject and creates an alert audience, well-oriented for further study. The film was designed for use in junior-senior high school, although many teachers in the intermediate grades will find it valuable to introduce the subject.

Animation was used forcefully in several other films this year, including *The Human Body: Circulatory System* and *Animals with Backbones*. *Reproduction in Animals* contains effective use of photomicrography.

Another noticeable trend this year has been the increased preference for Coronet films among those who obtain their films from rental libraries. This is due primarily to the wide range of good subjects available, supplemented by the Coronet program of cooperation with rental libraries to assist in bringing these outstanding films to the attention of film users. These include imprinted catalogues, flyers on individual films and films in series, and regular announcements of new releases in Coronet Magazine and in educational publications.

Coronet took another important step forward during 1957 in preparing true correlations with the principal textbooks now in use throughout the United States.

Correlation with units of instruction begins, of course, when the film story is being prepared for production. The correlation lists, therefore, are merely for the convenience of film users in selecting quickly those films which are designed to assist in teaching specific concepts. Sample

(Continued on page 586)

From the Coronet Film "The Jamestown Colony (1607-1620)"

pany nearly nineteen years ago. Furthermore, the 1957 releases brought the total of Coronet's teaching films to 744, each produced under direct and complete supervision every step of the way. Coronet thus continues its position as the world's largest producer of educational films.

Three other trends dominated the Coronet program during the year. One reached its zenith in the release of *The Jamestown Colony (1607 Through 1620)*, Coronet's third educational spectacular. This program of spectacular films includes a projected six films to be released during the current school year. The two other spectaculars released earlier are *The French Revolution* and *Audubon and the Birds of America*. The next in this special series will be *High School Prom*, to be released in January, 1958.

Educational spectaculars are films employing large scale production.

establish an even higher standard for the production of educational films—to give to schools the finest films for classroom use.

*The Jamestown Colony (1607 Through 1620)* was photographed completely at the 1957 Jamestown Festival. It includes the authentic restorations and scores of costumed people, who staged the re-enactments of early life in the settlement. It preserves the story of the first permanent English Settlement in America, and makes it available for classroom use as desired. It symbolizes Coronet's pioneering efforts in production on location and its working relationship with historical associations and museums to recreate history as authentically as possible.

Releases in 1957 continue another important trend at Coronet—films in series. Five world history films brought to 35 the number in this famous

# EDUCATIONAL RECORDINGS -

## The Teacher Never Had It So Good!

Taken even literally, the title of this article is strictly true. For the year 1957 further proved that today's teacher can obtain practically any type of record needed to teach, or supplement the teaching of, all major courses in the curriculum.

During this year, and for the past several years, there have been two major developments in educational recordings. First, there is the tendency for the major record companies (Victor, Columbia, Decca, etc.) to confine their educational offerings to the broad school needs for records in the field of classical and semi-classical music, square and folk dances, and some occasional records for the Social Studies.

On the other hand, the smaller record companies seem to have taken the lead in supplying the more highly specialized school records, such as elementary song and rhythmic material, poetry and readings, folk and ethnic recordings, dramatizations of historical events, etc. Incidentally, nothing derogatory is meant by the term "smaller record companies." It simply means those companies, such as Folkways, Gloria Chandler, Caedmon, and Enrichment Records, and many others, which have neither the resources nor widespread distribution facilities of the "major" companies. As a matter of fact, many of the "smaller" record companies have done a really outstanding job of providing the highly specialized educational records demanded by some schools, and not provided by the larger companies.

What did 1957 bring in the way of new recordings? First, let's cover the general field of classical music. The major companies, of course, continued to literally pour out thousands of new recordings of classical type music, all of which can be used at some level of education. These recordings must be considered as "educational" as the multiplication tables, set to a musical, rhythmic background, which were issued by one company this year. Today, the teacher can obtain a recording of almost any piece of serious music ever written—from Debussy's well known *La Mer*, by Munch and the Boston Symphony, to such an obscure composition as Mancinelli's "Cleopatra" Overture, by Gamba and the London Symphony. Name the selection, and you can most probably find a recording of it.

With this plethora of riches, the real

**L. V. Hollweck,**  
Manager RCA Educational Services

problem of the school is to find *which* of the 2,000 record companies in business today issues what is needed. There is no easy answer to the problem except to say that someone like the music supervisor, or audio-visual supervisor, or some teacher in the school should be given the responsibility of keeping as up to date as possible on what is being issued or available from both large and small record manufacturers. This can be done by obtaining catalogs yearly from as many companies as possible (both manufacturers and retailers specializing in educational records), by checking advertisements in educational and other magazines, reading record review columns, etc.

Of considerable interest to the school purchaser of records during 1957 was the prevalence of many "special price," meaning lower priced, recordings. Most of the larger companies regularly released certain \$3.98 LP's at \$2.98 for a limited time. Of even more importance was the expansion of the \$1.98 LP lines of labels, such as Camden. These low price lines offer standard classical and children's records, performed by major artists and orchestras. Every educator should investigate these \$1.98 records—you *can't* go wrong at one-half the usual price of a record!

During 1957 there was further expansion in the release of the more highly specialized records for schools, highlighted by many records for use in the Social Studies area. These included additional recorded dramatizations of the Landmark books, poetry and literature readings, and many new records of music, folk dances and songs of foreign countries, as well as sections of our own country.

Of considerable interest also during the past year was the entrance of Key-board, Jr. into the record field with a series of records for Elementary, Junior and Senior High Schools which tie-in directly with their particular monthly lessons. Appearing also were series of records, with instructions, to teach Social Dancing.

During the past year two of the major music book publishers, Ginn and Company and Silver Burdett, issued new books with accompanying records. This is a continuance of the practice of such companies to provide "model"

recordings of the material in their song books. This practice is also being adopted by other companies; for example, some of the standard publishers of band scores now also have recordings for use as "models" of how they should be played.

Released also this year were new filmstrips in the Jam Handy series of Stories of Music Classics. For each filmstrip they also issue an LP record in which the music is directly related to each frame of the filmstrip.

A prominent development during the year was the resurgence of children's records on the low price labels. While some of these records are not what might strictly be termed educational, judicious selection by the teacher will uncover dozens of fine story type records which are ideal for use with pre-school and primary grade children.

### Future Trends in the Record Industry

A problem common to most schools is their inability to get good service on the more specialized educational records. Simply stated, most record dealers just can't afford to stock them. A promising new development is the growing interest of Audio-Visual dealers in stocking and selling the educational record in addition to the projectors, tape recorders, phonographs he now handles. RCA Victor has just made available, to its Audio-Visual dealers, the complete line of educational records—the Basic Record Library for Elementary Schools, folk and square dances, foreign language courses, etc. This development, if expanded to the fullest, could help solve the school problem of obtaining records promptly.

There is a further growing trend toward more record dealers specializing in a mail order business devoted solely to records for schools. Such set-ups now exist in Washington, New York, Los Angeles, San Francisco and other cities. This type specialty dealer issues his own Educational Record Catalog and will give prompt mail order service anywhere in the country although their major business is usually more of regional nature.

All in all, 1957 was a good record year as far as education was concerned. There is every indication that the future will be even more productive, especially as tape recordings, which schools are just beginning to investigate, come into more general use.

# The Role of the "Special" Film in Education

by Leo Dratfield  
Contemporary Films, Inc.

The motion picture is the most important means of communication developed by man since the invention of the printing press. Because the gift of sight is common to all men, the fantastic ability of the film to communicate enables it to transcend the barriers of language, race and creed, and even to a considerable extent the differences of cultural or educational level. As a means of mass communication the feature-length entertainment film, or, more recently, its specialized versions produced for television, is the first thing that comes to mind whenever the concept "film" is mentioned.

While it is true that, for better or worse, all films are "educational" in effect, a special category of educational (instructional, nontheatrical) pictures has been developed quite apart from the theatrical or entertainment mainstream. This in turn has numerous subdivisions: classroom, religious, training, advertising, etc.

But there is a third main current or type of film that, while it has attributes of those already mentioned, fits strictly into neither grouping. This, for want of a more precise definition, is the "special" film. Various categories as art, poetic, informational, documentary, educational, or experimental, these "special" films are in the main nothing more than highly entertaining, interest-challenging films dealing with those real areas of human life, thought and art that the average commercial entertainment or didactic effort leaves fallow.

Due to the nature of the film industry's economics and booking eccentricities, these "special" films cannot, except for rare exceptions, be seen in the regular theatres. The public is thus deprived of access to a large body of interesting work produced by some of the world's most gifted, most creative film-makers. This situation is met by specialized film libraries, ours among others, who encourage the production and foster the distribution of the special film. In our own case, for example, the 1957 releases (or in a few cases re-issues) ran the gamut of literary classic (VOLPONE), art (PICASSO), sociology (ON THE BOWERY), whimsy (the Lotte Reiniger silhouette cartoons), master documentaries (Robert Flaherty's LOUIS-

IANA STORY), biography (HELEN KELLER), and dozens of others, long and short. Each reflecting small segments of life—an amusement park, African masks, cinematic experimentation—these are films that, with outstanding artistry, convey an elusive yet essential part of life.

The "special" film is no longer a curio, but a healthy, integral part of the film scene. Such films now circulate widely to adult education groups, to museums, schools and colleges, to film societies and to churches, and, in general, to the curious and intelligent who are dissatisfied with the stalling, sometimes anti-human, films that constitute so much of the theatre's offerings. Educational institutions draw upon the "special" film library as a

tribution has been afforded such creations as those of Louis de Rochemont, British Information Services, Mental Health Film Board, Rembrandt Films, and National Film Board of Canada. Screen classics, plus the ever-expanding works of independent producers generally, broaden the diversification of offerings available through the "special" film library.

Independent, creative artists all over the world are working outside the orbit of commercial production. Extraordinarily sensitive, they translate the phenomena of life into film, and give their fellowmen an opportunity to add dimension to learning and to leisure. There is growing use and demand for the "special" film. Its prospects and potential for the pro-

From the Contemporary Film "The Magic Fiddle"

source of enrichment material as a challenging, broadening, illustrative spicing to conventional lecture or classroom routines. The special film stimulates the student's imagination and brings to light exciting facets of the world of literature, travel, the arts and contemporary thought.

At present it is only through the special film library that wide-scale distribution can be obtained for many worthwhile films from unusual or specialized sources. In our own case dis-

tribution of better understanding among the peoples of the world are unlimited. We cannot know everything, or be everywhere, but thanks to the film the dream of universal knowledge and universal experience is not too wild a dream. Bringing special witness by intensely creative talents that burst through conventional forms if need be in order to say their say, this "different," unusual, "special" film should be a part of the cultural fare of everyone.

# RESEARCH AND CORRELATION

## Film Series Provides Physics Course

by Warren P. Everote

Vice-President, Research and Production  
Encyclopaedia Britannica Films, Inc.

Encyclopaedia Britannica Films has just completed its biggest year of production. During this year we completed successfully the most massive project of its kind ever undertaken in the classroom film field—the production of a full year's course in high school physics. At the same time we carried through an expanded production program of films and filmstrips designed for major subject-matter areas ranging from the primary grades through the senior high school.

This year's program had three objectives: To produce films and filmstrips most closely designed to meet the urgent needs of teachers; to employ outstanding talent and the most effective motion picture techniques in all productions; to take the lead in pioneering new types of materials, new subject matter areas, and new methods of production. All of these aims were reflected in our activities during the year.

The endeavor to tailor our production more scientifically to school needs has required increased emphasis on research, including the study of the curriculum and the assessment of the place of films and filmstrips in relationship to other instructional materials in typical units of study. An important research activity during the year was the publication of a comprehensive set of correlations of our films and filmstrips with textbooks most widely used from kindergarten through grade twelve.

Research was also basic to another facet of our program that was expanded upon this year. This is the continuing evaluation of our present library and the revision of films to bring them up to date or to make them better suited to current school needs. Among these completely new editions, called second editions, released during the year were such essential films for the primary grades as *FOOD STORE*, *ROBIN RED-BREAST*, and *FARM ANIMALS*; films for elementary science, such as *ROOTS OF PLANTS* and *THE FROG*; and such elementary social

studies films as *ARGENTINA — PEOPLE OF THE PAMPA* and *BRAZIL — PEOPLE OF THE HIGHLANDS*.

The year's production program provided a balanced offering for every grade level including films and filmstrips designed for important new fields as well as those designed to strengthen popular old ones. Of exceptional value for the primary grades is a group of exciting new films for reading readiness and creative expression, including such titles as *MOTHER RABBIT'S FAMILY* and the highly imaginative *MRS. AND MR. PEACOCK*. For much the same audiences we released a new set of filmstrip series developed from the work of Walt Disney. These include *DISNEYLAND*, *THE ARCTIC WILDERNESS*, *ADVENTURE STORIES*, and others.

For the upper elementary grades our production included a number of films in science and a very broad-scale program of new films and filmstrips in world geography that blanket the globe from Latin America to Southeast Asia and on to Western Europe. Of particular significance in elementary social studies is a complete package of three films on the American Indian that provides a historical sweep from pre-Columbian times to the present day, quite unlike any other film materials now in the field. Complementing these films, we also released an imaginative and highly artistic filmstrip series on the cultures of the Plains and Woodlands Indians.

Among the noteworthy films produced for the high school level were additions to our series in world history and American history, among them *THE RENAISSANCE*, *LEONARDO DA VINCI*, *SIR FRANCIS DRAKE*, and *WORLD WAR I*. We also added to our basic and ever-popular offering of biology films with such titles as *PROTOZOA: ONE-CELLED ANIMALS*, *WORK OF THE BLOOD*, *GROWTH OF SEEDS*, and *INSECT LIFE CYCLE: THE PERIODIC CICADA*.

The production effort that went into these groups of films illustrates the emphasis in our program on the second objective: To employ outstanding talent and the most effective motion picture techniques. Our new group of biology films contains photography of great distinction—including sequences of photomicrography, time lapse photography, and other camera techniques. These are the work of such noted specialists in photomicrography as Dr. Roman Vishniac and the famous team of Dr. Brenton R. Lutz and Dr. George A. Fulton of Boston University, and Dr. William Harlow in time lapse photography.

To put outstanding production qualities into our films and filmstrips we have also continued our program of overseas production on a broad scale. Our purpose here is always to make our films wherever they can be most effectively produced. Hence we went to Vienna to make our new orchestra series and to France to make our distinguished series in Medieval history. This year we went to Italy for *THE RENAISSANCE* and *LEONARDO DA VINCI* and to England for *SIR FRANCIS DRAKE*. We also expanded our production program in geography, sending cameramen as far west as Burma and India, as far south as Argentina, and eastward to the Netherlands and Germany.

An important new development in classroom film design was the production and release by Encyclopaedia Britannica Films of the complete course in high school physics. Comprising 162 films, each a half-hour long and in color, this series presented Professor Harvey E. White of the University of California teaching an introductory physics course to high school students in Pittsburgh, Pennsylvania. The course was filmed at Pittsburgh's educational television station, WQED, simultaneously with Dr. White's live telecasts to high school classrooms. The production was made possible by a grant of a quarter of a million dollars from the Fund for the Advancement of Education of the Ford Foundation. Even before the filming of the course was completed, it was in use in the Chicago Public Schools, and, by year's end, some forty school systems were teaching physics through films. The course was also being tested in a broad scale study of the effectiveness of visual teaching conducted by the University of Wisconsin, and financed by the Ford Foundation. This study involved telecasting the course to 3000 students in high schools in seventy Wisconsin communities.

# Audio-Visuals Serve Specific Church Needs

by Donald R. Lantz,  
Director of Religious Education, Family Films, Inc.

One of the significant developments in the field of religious audio-visuals is the growing emphasis upon specific materials to meet definite church objectives. There is a growing realization on the part of both the audio-visual and the curriculum specialists that motion pictures, filmstrips, and all other audio-visual resources must be integrated more closely than ever before with church school curricula and church emphases.

Since such integrated material will be used more widely and (it is hoped) more effectively than would be the unrelated production, producers are more and more concerned with creating materials that can be recommended by denominational leaders and can be written into church school curricula resources for teachers and into church calendars.

The most urgent demand seems to be for materials related to the individual church school classroom. An increasing number of Sunday School lesson guides published by independent publishers as well as denominational publishing houses are appearing with suggested audio-visual resources written into the teacher's helps and lesson commentaries. Two examples are the Sunday School Teacher's Guide (Tarbel) and the International Lesson Annual (Abingdon). Denominational leaders such as Mary Phyllis Young (Presbyterian, U. S. A.) and Floyd Watt (Evangelical United Brethren) make specific suggestions for Church school teachers. The Methodists and the Southern Baptists have been publishing correlation lists for several years. Many other denominations are likewise helpful to their constituency in suggesting audio-visual resources.

In the past there has been over-concentration on a single media. Some denominational leaders are constantly suggesting a variety of correlated materials that are in keeping with the best knowledge of the effective utilization of related materials that support one another. Varieties of audio-visual resources are suggested for specific lessons and units. Good correlation and integration does not concentrate on filmstrips, motion pictures, or any other media. The best device or resource to accomplish the intended objective under the condi-

Old Testament Production Schedule: L to R, Lou Perlof, Prod. Mgr.; Rev. Victor Growcock, Exec. Producer; Cloncy Hernem, Ass't Director and Edward Dew, Director.

tions in which it is to be used is now being recommended. A high level of such utilization is appearing in the church field.

The producer of religious audio-visual materials is helping to develop this higher concept with extensive utilization training workshop and leadership school activities. In our own case, also, Family Films has established a fully equipped department for the production of filmstrips.

During the past year there has been a notable step-up in denominational production programs. Production of films and filmstrips by denominations for their own denominational purposes is nothing new, but there has been a growing realization that denominational curriculum limits are best observed by the denomination's own production efforts. In many cases use is made of independent professional producers such as Family Films for major production programs for television series or annual promotional films. The newest and most active trend in this field is in the production of biblical films. Examples are the ten-episode Book of Acts Series by the Southern Baptist Convention and the fourteen-episode Old Testament Series by the Lutheran

Church-Missouri Synod, both made at Family Films' studios in Hollywood.

These activities in no way displace the creative activities of the independent religious film producer here or abroad, and the same is true for the cooperative denominational efforts of the Broadcasting and Film Commission of the National Council of Churches.

Even with a constant flow of better integrated materials assured, the religious audio-visual field is not without its problems. The chief concern is for the development of leadership for the training and encouragement of local church and church school workers to make the proper and effective uses of these resources. This issue occasioned much serious discussion at the International Conference at Green Lake this year. The idea that there was "too much" audio-visual material was balanced with the bringing to light of the fact that there are large numbers of churches and church-related organizations who are not now using audio-visuals. Until these make frequent, consistent, effective, and repeated use of these God-given instruments, there never can be "too much." Our big problem now is in better leadership training.

# NONTHEATRICAL FILM RENTAL-- 1957

by Paul R. Foght

General Manager, Ideal Pictures Corp.

In full keeping with the times, the nontheatrical film business does its share of rocking and rolling. It is a business which is fundamentally in full accord with today's mores—it helps accomplish the great big American objective of getting more work done in less time and thus enables us to have more time for recreation and relaxation.

Films help the school to cover twice the traditional subject matter without homework. Business uses films to explain and teach. Churches motivate and attain their Christian objectives by use of film—in adult service and Sunday School.

To increase our enjoyment of leisure time, the entertainment film stands more than ever ready to administer to the tastes and interests of individual

groups seeking healthful and pleasant recreation. It affords recreation and relaxation better by far than any "happiness" pill.

Of course, any business or industry must have more than a sympathetic accord with its times to warrant continuing success. In this attempt at a nut-shell review of 1957's nontheatrical film business, I must needs fall back upon my knowledge of Ideal Pictures' experience but I believe it to be sufficiently typical to serve as a picture of the field.

The entertainment film took some mighty severe jolts when television became our daily companion. During the 1946-1948 period, most film libraries were dependent upon independently produced features for their livelihood.

These were the self-same pictures to which television had initial access. The inevitable result was a great fall-off in entertainment film rental revenue and the virtual death of home-show customer trade.

Gradually, this important part of our business has righted itself. A great new wealth of features has come into the sixteen millimeter field. Seemingly, nontheatrical distribution is destined to receive the Hollywood product after the period of 35 millimeter release, but considerably prior to clearance for use by television. With the release of better, and much more recent pictures, the feature business has regained its stride.

Ideal Pictures is fortunate in having exclusive 16mm distribution of the more current RKO-Radio-Pictures, Inc. productions, especially the most recent block of approximately ninety new features, now available only through Ideal's branch libraries. These are not currently released for television, and are usable (in "shut-in" situations) as early as six months after theatrical release date. Older RKO releases are now available from other sources for both TV and 16mm group audience use. Ideal will continue to offer some that have been found especially suitable for school and similar use.

People are inherently gregarious, and as long as this holds true, the feature film will serve well as a catalyst whenever it is essential to gather people together. This holds true whether the objective is family night at the church, a P.T.A. meeting, or election night in the trade union hall. With excellent timing, the upsurge in entertainment film usage has solved many a school's problem of overcrowding at noon-hours. Here the film helps assure needed quiet when half of the school lunches while the other half remains in class.

Industry-sponsored films continue to improve in their ability to present new ideas and new products. Today these films definitely fit into most school curriculums and are widely accepted by clubs, churches and lodges. Ten years ago the sponsor eagerly sought audiences for his film. Today he has become increasingly discriminating in his search for specific audiences. As sponsored productions continue to improve this trend will continue. Users of sponsored films can help speed this improvement by adding their comments in the space provided on the "audience report" forms. Every request for a free film definitely implies a promise to mail back a report on the showing, as binding as that to return the film itself. Since the sponsor pays the distributor only for bookings on

"ESCAPADE IN JAPAN"—one of the new RKO-Radio Picture Corp. feature films released in 16mm through IDEAL PICTURES CORP.

which the user has returned this audience report, it is clear that a failure to mail such reports is an unfair hardship on the library that has supplied the free film.

It might be said that the religious film offerings of today have outraced their market. Our religious producers are offering a breadth and excellence of new production which leaves many churches without adequate knowledge or guidance in the task of selecting proper materials for the proper time of use. Practically any denomination and most individual churches can select films doctrinally suitable among the wealth of films recently produced. Thanks to the foresight of the religious film producers, these films are offered the church at reasonable and uniform rental rates. Workshops and seminars are training more and more better qualified film users. This inevitably leads to the increased utilization of these fine materials.

My personal view is that the distribution of classroom teaching films has been on an out-of-step basis from the beginning. Mistakenly, in my opinion, the teaching film initially sought its distribution base in the tax-supported institution rather than in free enterprise competitive business. Except where films are for the buyer's own use, this subsidized distribution has placed great handicaps upon the private producer and distributor of educational films. We still find state university film libraries renting films below cost to school systems more adequately financed than the rental source itself. There are even instances where the films purchased by one state are rented on a below cost basis to the schools of some other state. A self-sustaining film rental structure is essential if the full investment needed by the teaching film field is ever to be attracted to it. Fortunately, teaching film rentals are gradually reaching levels which are self-supporting. This is progress indeed, considering that only twelve years have elapsed since major educational film producers first made their product available to commercial libraries.

Like every competitive industry, the nontheatrical film offers all of the thrills of achievement and all the disappointment of failure. Perhaps ours is the path of the medieval Crusader who took three steps forward and then one backwards. At any rate, while progress may be slow, it does seem to be steady, and the operator of a good nontheatrical film library has the satisfaction of rendering a service essential to the well-being of many thousands of group audiences of every kind.

# Features and Shorts Find Wide Distribution

by Robert C. Danielson  
FILMS INCORPORATED

Since its acquisition by Encyclopaedia Britannica Films in 1951, Films Incorporated has continued to build an incomparable library of the finest feature films and short subjects produced by the major Hollywood studios. Now more than 1,500 feature films and short subjects are available for distribution to schools, churches, clubs, industry, hospitals, institutions and other community organizations.

Already distributing features and shorts from 20th Century-Fox, Walt Disney, Warner Bros., and other independent producers, Films Incorporated recently signed a contract with Loew's Incorporated for the 16mm nontheatrical distribution rights of M-G-M productions.

Included in the arrangement are such excellent feature classics as IVANHOE, MADAME CURIE, JULIUS CAESAR, EDISON THE MAN, and KIM, plus many others suitable for school use.

The addition of the great M-G-M features is the latest in a long list of "firsts" such as Films Incorporated's introduction of features and shorts in 16mm CinemaScope, offering users the finest in wide-screen motion pictures. Today more than 100 true CinemaScope features and short subjects are listed in the Films Incorporated catalog. It has been gratifying to see the immediate reception to

16mm CinemaScope which has been widely accepted and used by many schools, hospitals, industrial and other organizations.

As a special service to its customers, Films Incorporated now offers a complete line of anamorphic lenses and Radiant screens, for wide-screen projection plus economical package plans where both lens and screen can be purchased at a nominal price.

Films Incorporated maintains seven major exchanges and many sub-exchanges located in principal cities throughout the nation. They assure customers prompt, efficient program service with complete film inspection by skilled personnel and on-time, dependable delivery.

Each year a catalog is published listing all titles with complete descriptions. This year, not only was a 112-page catalog produced in September listing the top-quality features and shorts, but also a 48-page Budget Feature catalog was printed, listing 450 additional titles available at budget rental. Copies of both catalogs are available upon request.

Looking ahead towards next year we will see the latest in new feature film entertainment (available as early as six months from 35mm national release date) added to the world's finest features and shorts from the foremost producers.

"I'm positive Miss Kennedy said  
SPlice the tape Johnny, not  
SLICE it!"

# Professional Quality for School-Made Films

By Susanne Clark  
Geo. W. Colburn Laboratory, Inc.

Colonel J. H. Jacobsen gives acting direction to Northwestern Military and Naval Academy cadet, for role in film "Time of Your Life."

When Colonel J. H. Jacobsen shows a group of Northwestern Military and Naval Academy alumni and prospective students the film "Time of Your Life," it is with a special pride, for in addition to being headmaster of this military prep school at Lake Geneva, Wisconsin, an army officer and an Episcopalian priest, he is also the producer of this 26 minute sound-color documentary film.

When he became headmaster some year ago, Colonel Jacobsen began to take his own publicity still shots. Soon his growing interest in photography led to the purchase of a 16mm motion picture camera. He developed the habit of carrying his 16mm camera to all outdoor events. Parades, football, tobogganing, skating, baseball, sailing and other outdoor sequences soon totaled over 4,000 feet of exposed footage.

As the footage mounted, Colonel Jacobsen began to toy with the idea of creating a film about Northwestern using the best of these sequences. Working with a limited budget, his goal to produce a professional, polished film on this restricted budget seemed impossible until he discovered that professional producer services such as editing, sound recording and titles could be purchased singly or in combination from qualified labora-

tories or producer service organizations.

After rough editing his footage, he took the remaining 2,000 feet and his ideas for a script to the Geo. W. Colburn Laboratory, Inc., where he found the total tab for the finished film would depend solely on how much or how little of the work he performed himself. He found there was not just one but many ways to solve his film problems effectively. After every phase of the motion picture from script to finished film was reviewed, Colonel Jacobsen selected the following professional services to complete his film:

**Script:** Because a film script is a highly skilled form of writing involving technical know-how, Colonel Jacobsen worked closely with an assigned professional writer and an editor. They viewed the footage together and decided what additional sequences were needed to round out the story.

**Photography:** Since interior photography of sequences including Colonel Jacobsen and school activities were needed, Colburn sent a camera crew to Lake Geneva for two days of location work.

**Workprint:** Because original film is irreplaceable, a workprint copy was made. The editors cut, paced and arranged sequences using this workprint as they created the film story.

**Talent Selection:** Auditions were held to select a narrator. The voice was to be that of a cadet at the academy who appeared throughout the film. Selected for the part was Ezra Stone who played *Henry Aldrich* on radio for many years.

**Recording:** After the script and talent were approved by Colonel Jacobsen, the narration was recorded. To provide authentic music for one of the sequences, the academy's bagpipe troop came down to the studio for a special recording session.

**Editing:** Experienced editors did the creative and exacting work of editing the film to the script.

**Titles:** Main, credit and end titles were designed and photographed by the Laboratory's art staff.

**Music and Sound Effects Selection:** An experienced music editor carefully selected music for the title and end sequences and three "bridges" from the large stock music library maintained by the Laboratory.

**Approval Showing:** By "interlocked projection," workprint, voice track

and music track were combined and shown for Colonel Jacobsen. Some minor changes were made and final approval was given.

**Rerecording:** Voice, music and sound effects tracks were blended smoothly onto a single "mixed" track for making the final composite sound prints.

**Matching:** At last the original film was taken from the vault, matched frame by frame to the edited workprint. The matched original along with the mixed photographic sound track was used by the printing department for making the first answer print and all subsequent release prints.

**"Answer Print":** This first color print combining sound and picture was delivered to Colonel Jacobsen just 60 days after his first planning session.

"Time of Your Life" had such a favorable reception that the academy ordered also black and white prints for TV use. Though the film was shown on 12 local TV stations, Northwestern found that their best response by far came from showing the film to selected groups . . . parents, alumni and prospective students. Alumni in distant parts of the country used the film to interest boys in the school.

Colonel Jacobsen has had many favorable reactions from people who have seen the film. So far only one dissenter stands out in the group: His four year old Chicago nephew who lisped after seeing one strenuous marching sequence, "I wouldn't like to go to that school. They never let the boys sit down!"

Five years after Northwestern completed the first film, it was decided to revise it in order to keep pace with the changing times. To place more emphasis on Colonel Jacobsen's spiritual leadership, sequences showing him in army uniform were replaced by new sequences showing him in the clericals which he now wears around the academy.

New buildings and other improvements were also incorporated. By making these few changes, Northwestern had updated their motion picture at very reasonable cost.

Colonel Jacobsen has now produced a second film, "Summer Sailors," in which he did *all* the photography. The Colburn organization again handled editing, music selection, recording, narration, artwork, titles and release prints. By careful pre-planning and working closely with the Laboratory, it was possible to conserve costs even further on this film.

# Church department

by WILLIAM S. HOCKMAN

## Any One For Music?

This month we'd like to nail another thesis to the A-V barn door. (Last month it was that illustrators must become communicators before the pictorial qualities of filmstrips will improve very much.)

Put as a question, our thesis is: Why do we need music with instructional films and filmstrips? Put as an opinion: From every angle, we consider background music a bother, a waste of money, and a substantial handicap to any film or filmstrip addressed to the mind of the viewer.

Put historically, we might observe that background music was taken over unceremoniously by both client and producer, neither going to the bother to figure out the essential difference between films for education and films for entertainment. Music, therefore, in "educational" films is a vestigial remnant.

Out of my experience, I am prepared to say that few films I see are helped by their background music, and that in most cases it is a downright psychological nuisance which impairs effectiveness.

More to the point, neither from seeing a vast number of films nor from conversation with clients and producers have I come across any arguments for background music in educational films (and that includes just about everything beamed at the church field) which are psychologically or cinematically respectable. There may be some, but I have not run into them.

In conclusion, if the money spent on music were used to give most films a sounder psychological structure, we would have more pleasing and effective films—films whose poor qualities would then need no covering of music!

Any one for background music?

## Mark of Quality

When the motion picture, *The Mark of the Hawk*, comes to your theater, go to see it. It has beauty, and film-polish, and just the right amount of cinematic sophistication to

please you. With its beauty it has bluntness, too. If your skin is thin on the racial issue, it might raise a slight blister. If it does, it will be good for you to know that you are allergic to the common sense logic and sociological argumentation of this film. Now we don't mean that you will get a chance to talk back to this film. Chances are that you will be talking about it for some time. You will like the strong drama that Ertha Kitt and Sidney Poitier set before you, especially in the first few scenes. You will like the pace of this film, and when the flashback comes on China, you too, will wonder what you are getting into. Having been through it, I can hint. You'll see some of the most convincing acting of your life. Besides, you'll be whacked over the head with a few ideas that will make you say "Ouch!" Chances are that after you have seen this film—and its 85 minutes tick off mighty fast—you'll say, "This film ought to be shown in Africa, all through Southeast Asia, in the Philippines, in South America, in Japan and all across the Pacific, and, down the road in the next town." Well, that is what the Board of Foreign Missions of the Presbyterian Church intended when they made it. Over one-half of the people of the world are determined to achieve political freedom, and it is a complicated process, as this brilliant young African politician (Poitier) found out when he took to the short-cuts when his patience ran out. How free can men ever be, short of freedom of soul? Freedom is related to religion as the new tree to the grandfather stump. Intense drama all the way, and a wide-window on our present world, this film will pay you a fine bonus of entertainment while challenging your mind. —W/S/H

## Useful Background Film

Too much "missionary education" is anemic factually, over-loaded with urging, skimp of down-to-earth information about people and places, and crucially short on appreciation. Significant progress is being made—and is evident in the A-V materials undergirding our

study of Japan this year—but we need to turn to such films as *Life of a Philippine Family* to fill in our information deficit on many areas of the world. Produced by Coronet for use in the school field, this 11-minute B&W film gives us rather intimate views of the daily life of a village family—sleeping, cooking, eating, working, going to school, at school, working the rice field with a carabao, and celebrating the birthday of nine-year-old Ramon. This kind of seeing takes us in close so we can develop an appreciation for the human fineness and texture of these people and their culture and ways. Good for children from primary up, but will hold the interest of adults as well, and instruct them as it goes. (Try your local library, or write to Coronet Films, Coronet Building, Chicago 1, Ill., for information.)

## Answer To Pessimism

Orville H. Kuhn\* went back to Pittsburgh from the Green Lake A-V Conference and looked up some facts and figures and writes his answer to gloom and pessimism as regards film rentals in the church field.

We shall summarize: The use of religious films is not a fad but a fact. His annual volume of rentals keeps going up. For the year ending September 1957 he had as many rentals as for the year before on films which were in the library all that time.

He took the films of two producers and found that for the last three years he had done the same volume of business on them each year. He then took, at random, some of the more active titles and studied them, finding that they had done approximately equal business each year since 1954.

Taking *Broken Mask*, this year's study film on Race, Christ and The Church, he found that he already had (up to Oct. 15) more bookings on this film than he had on the corresponding film for last year during the whole season.

He finds five reasons for this "good" film business: a) Editors and curric-

ulum writers are nominating films in their materials; b) The church is learning that a good film communicates and gets the job done, and that some films are better than others; c) Film use seems to lead to more film use, and thus the benefits of prior utilization is being felt; d) There has been an increase in the national advertising of religious films; e) His own promotion has been constant, and he has tried to give service of all kinds to the churches.

May we observe that there is, without doubt, another factor: A circle with a radius of 100 miles drawn around Pittsburgh would include a large percentage of the churches of Mr. Kuhn's denomination besides a great many others of size and with substantial programs.

\* Director, Religious Film Libraries, United Presbyterian Church, 209 Ninth Street, Pittsburgh 22, Pa.

Bob Littlefield, of Family Films, Productions, making up Robert Brubaker, who plays Elijah in the Old Testament Scriptures

Authenticity in make-up is but one of the many problems which the producer of Biblical films must face. Following general facts and information as far as they will take him, he must depend on common sense and reasonable inference for the rest. Here we see Bob Littlefield, make-up artist for the past 24 years, trimming the beard of actor Robert Brubaker, who plays the part of the Prophet Elijah in one of the fourteen Old Testament films, now in production at Family Films, Inc., Hollywood, and to be released early in 1958 by Concordia Films, 3538 S. Jefferson Ave., St. Louis 18, Mo.

## Brace of Useful Films

Why were they shellacking her, when she had represented the majority of her calls when she voted on that issue before the student council? At last she could take no more from that vocal minority, and she arose to set them straight on what *Majority Vote* really means—and that's the meat of the 7-minute B&W film which will launch your youth group in an orbit of profitable discussion of just how it votes and carries on its business as an organization.

In good citizenship, where does a person's responsibility end? If one job leads to another so that a man must neglect his family and his leisure, is he justified in saying No to those who want him to take on the job of leading a community project? *Community Responsibility* boils down the arguments pro and con in a dramatic situation which will take just 11 minutes of your group's time. Chances are that you'll need to halt their discussion after 44 minutes, so motivational will this film be for any group of adults. Useful for men's groups and couples' clubs, in and out of church.

One man, driving to work, observes the traffic signs—regardless of the time of morning or night—but a second does not. Has one a conscience and the other not? Is the conscience of one working better than the other? Just when and where are the *Beginnings of Conscience*? In the nursery? On the playground? In the classroom? In family relationships? Or, all over the place? Not trying to say everything, and hinging mostly on psychological considerations rather than religious, this 15-minute film does get some things said, some hinted at, and enough assumed to spark any alive adult groups—especially parents and teachers—into a lively and profitable discussion on how to develop a good conscience in our children and young people. (All three films from McGraw-Hill Text Films, 330 West 42nd Street, N. Y. 36. Try your local A-V library, or write to McGHTE.)

## User vs Critic

A correspondent raises the question of critic versus user by noting that a filmstrip which was rated none too well by certain critics seems, in the minds of the users, to be getting the job done. "When the critic finds serious faults," he asks, "and the laymen have only praise for the 'spiritual impact,' then how does one discover the bridge between the two?"

Could the bridge be that each one, the critic and the layman, must be understood in two different contexts of experience? We would hate to undertake to set the layman up as a critic of filmstrips as filmstrips. He knows them in the context of use. He knows, or thinks he knows, that they get the job done. That satisfies him.

But good filmstrips are *good* like milk. Their essential goodness can escape the stubby analysis of taste. So with filmstrips—that they get some kind of a job done under a certain circumstance says little about their inherent qualities as a visual medium. Milk that looks and tastes fine may not be up to accepted standards for milk as human food. Few dairymen would be willing to stake their case for good milk on taste and utility.

Again, we can question this pragmatic test on another ground: A better filmstrip might have done a better job; and a poorer one a poorer job. These laymen, widely scattered across the nation, see and use mighty few filmstrips. Thus, the base of their judgment is small. Too, judging "spiritual impact" is not easy. What are the evidences of it? Immediate audience reaction? Ultimate changed behavior and attitudes?

Getting more theoretical, we ask: Who is a critic, anyway? Is the housewife that drives a few tacks at cleaning time a critic of hammers? Is the jalopy owner to be taken as a critic of front-end geometry just because he can go down the highway at 60? Not much! The critic's judgment includes more than just utility.

## Film Production Trends

(Continued from page 577)

lists are available to audio-visual and curriculum directors for duplication and distribution among teachers and supervisors.

The 1958 program at Coronet will include the methods and trends outlined above, with emphasis placed upon basic curriculum and location research. The company will continue to concentrate on films researched, written, and produced under the complete control of the Coronet staff. This will be done in collaboration with outstanding educators, to insure the highest standards in educational film production. Most significantly, Coronet Films will continue its balanced film program to fill the needs of the *whole* educational curriculum, at all grade levels, with fine motion pictures in both color and black-and-white.

## LISZT AND HIS MUSIC

(Coronet Films, 65 East South Water Street, Chicago 1, Illinois) 14 minutes, 16mm, sound, color or black and white, 1957. \$125 or \$68.75. Teacher's guide available.

### DESCRIPTION

Another film, LISZT AND HIS MUSIC, has recently emerged in the Coronet series on great composers. It follows essentially the same pattern as the others in the series—giving a short biographical sketch of the composer and presenting representative compositions.

Open scenes show Liszt as a young man, portrayed by a live actor, performing the opening bars of his *Concerto #1 in E Flat Major* for piano. The film then uses a switch-back to his early childhood when he first performed before the Esterhazy family at the age of nine. Subsequent scenes employ still photographs of Liszt's contemporaries and some of his original manuscripts coupled with live scenery of many places associated with Liszt's life. Closing scenes picture his last days as a teacher in Weimar and Rome.

The compositions recorded on the sound track are combined with the visuals to familiarize young people with the various forms in which Liszt wrote. These include excerpts from his *Hungarian Rhapsody #2*, "Eroica" *Etude*, *Etude #6*, *Sonata in B Minor*, the "Dante" *Sonata*, *Totentanz*, the *Poetiques*, and *Les Preludes*. Since Liszt contributed greatly to the development of the symphonic poem,

*Preview prints should be sent directly to the Audio-Visual Center, Indiana University, Bloomington, Indiana.*

more footage is devoted to *Les Preludes* as an example of this form.

### APPRAISAL

The film, along with the ones on Beethoven and Schubert, may be used by teachers to show the beginnings and development of the romantic period in music history. The film succeeds in capturing the emotional conflicts within this colorful and often distraught personality—of how he sought constantly to understand himself by withdrawing from the world and yet how he could never forsake the acclaim of audiences. Musicians and critics have long disagreed as to which was greater—the composer or the performer. The producers have successfully managed to keep the issue debatable. LISZT AND HIS MUSIC is recommended for use with music classes in intermediate grades through high school. Special adult groups may also find it useful in the study of music appreciation.

— Elizabeth Weiser

## PEOPLE OF A CITY

(Encyclopaedia Britannica Films, Inc., 1150 Wilmette Ave., Wilmette, Illinois) 18 minutes, 16mm, sound, black and white, 1957. \$75. Produced by Arne Sucksdorf. Teachers' guide available.

### DESCRIPTION

Arne Sucksdorf, one of the leading documentary film producers of Sweden, using no narration interweaves sequences of events in the lives of several people to relate moments of beauty and tenderness of everyday life in the city of Stockholm. His selection of

scenes, supplemented by mood music and environmental sounds, gives this motion picture its imaginative effect.

The action opens with a baby at a window watching sea gulls ascending into the sky over the water front of the city. The screen play follows the sea gulls as they fly higher over the city, alternating with scenes of busy life below as seen from the gulls' point of view. The city is shown astir with the activities of morning; traffic is moving; bicycles, faces, and feet moving give a rhythm to the morning; wheels of industry increase the tempo.

A young man is walking along the city street, the everyday street activities are viewed both from his point of view and also from the vantage point of an outside observer. This technique of alternating viewpoints is used throughout the film. Close-ups of this young man and other people sitting on the steps of a public building reflect the bright, warm morning. Suddenly lightning flashes! Thunder booms! The youth rushes for cover from the rain into the doorway of a hat store where two children are picking up marbles and a young woman is standing. Furtive approving glances are exchanged between the man and woman, and when the rain suddenly stops the boys leave bouncing their ball and the couple leave together.

The story action follows the children as they bounce the ball down the street in chasing play that ends inside the doors of a church. The camera captures the magnificence of the interior of the church, which awes the little boys. The smallest child nervously pulls at a string on a little sack and suddenly the stillness is shattered by spilled marbles clattering on the floor. The verger, at first annoyed, and then touched by innocence in the childish faces, bends down to help the boys pick up the marbles.

The sound of trumpets from the soldiers passing on horseback outside returns the story to the street. The parade marches by the waterfront as

# WALT DISNEY'S "EDUCATIONLAND"

Two years before Sputnik began ominously circling over our heads, Walt Disney and his creative staff had already completed their artificial satellite and had built a four stage rocket which carried a volunteer crew on man's first flight into outer space.

Of course it was all done by animation but the scientific data involved was identical to the present scientific explanations of Sputnik. Thus in the light of current and most certainly future events, MAN IN SPACE becomes a most appropriate release to the 16mm educational field. The running time is 35 minutes and prints are in color by Technicolor.

This challenging and provocative film is already being acquired by many audio-visual departments because:

1. The collaboration of world famous authorities such as Dr. Wernher von Braun, Dr. Heinz Haber and Willy Ley attests to the scientific validity of the subject as does the technical assistance supplied by the U.S. Air Force, American Rocket Society, California Institute of Technology, etc.
2. Competent science educators state this "science-factual" is an effective classroom teaching tool in the motivation of junior and senior high school students to seriously pursue the basic courses in science and mathematics fundamental to future careers in the total field of science.

Prints are available under the Disney long term lease plan to educational institutions (some limited rentals also). Please address your inquiry to my attention and I'll be delighted to send you complete information on MAN IN SPACE.

Carl Nater, Director  
Educational Film Division  
WALT DISNEY PRODUCTIONS  
Burbank, California

P.S. The second in Disney's new series of "Science-Factual" films - OUR FRIEND THE ATOM - is just now being readied for 16mm release.

an artist crosses a bridge carrying a satchel and easel. Over the guard rail of the bridge the artist sees a fisherman on a boat scooping fish out of a big net with a smaller net. A series of scenes follow showing some of the activities near the bridge, again dramatically using the technique of rapidly alternating viewpoints.

The camera's vantage point changes from the little boys, to the artist, the fishermen, the parade, and the young couple who have just re-entered the scene strolling along the bridge. It plays from one to another, setting a contemplative mood that is shattered when they all break into laughter as the old fisherman realizes that the artist is painting his picture and drops his net into the water, losing his fish, so that he might comb his hair.

The little boy trades his marbles for a fishing line and pole. While he is fishing and daydreaming, a big sea gull expertly steals the little boy's fish from the dock and again mounts to the sky over the city's water front buildings.

The film closes with dusk along the harbor front as lights are turned on. The camera catches the young boy and old fisherman walking together, a couple in evening dress, the young man and young woman walking hand in hand, and a blind man searching for the violin bow which he has dropped. The child stops and guides it into the hand of the blind violinist. Violin music, light reflections in the water, and darkening skies fade out.

## APPRAISAL

Arne Sucksdorff seems to have searched for the soul of the city in this poetical documentary which he has blended into a symphonic fabric of selected realism. The viewer can imagine each scene and sequence actually taking place on a summer day in Stockholm. Whether Sucksdorff directed nature to conform to his plan, or whether he used real moments from people's lives, he unfolds a beautiful essay which should delight any viewer be he social studies or geography student in elementary or high school, English or art student learning to observe his environment, or a student of photography observing effective and interesting composition and editing. The general public should also find this film entertaining. The committee felt that the film critic might find some unusual film techniques perhaps not unique - but the superb job of editing, composition, and blending of sound and picture is certainly an interesting experiment in documentary story telling.

- Wayne Howell

## STORY OF PEGGY AT THE FARM

(International Film Bureau, 57 E. Jackson Street, Chicago, Illinois) 17 minutes, 16mm, sound, color, 1957, \$135.

## DESCRIPTION

The film follows Peggy through a day's visit with her cousins on their farm giving impressions of farm life and emphasizing that there is much to be done by each member of the family. As the many different domestic animals found on a farm are introduced visually a few facts about each are given. The narrator interprets what Peggy sees, what she could be saying, and what others could be telling her.

Soon after the sun comes up and the rooster crows, Johnny and Janet begin their daily activities which today includes showing city-cousin Peggy around the farm. The children, sweater clad in the chill morning air, begin their tour at the barn. Father is already busy. He is pitching down hay from the hayloft for Johnny to feed to the horses standing nearby in their stalls. The colt, too young to eat hay, will drink milk from his mother when he is hungry. The sheep, pushing each other as they eat from the long wooden box, seem impolite to the

F & B carries a complete stock of motion picture and audio-visual equipment.

city girl but Janet tells Peggy that they are as polite as sheep should be. The goat Johnny is milking stands still while she is eating. Peggy helps Janet bottle-feed two baby goats and is allowed to hold another baby goat in her arms. It feels soft, warm, and doesn't wiggle like the baby pig that she holds later.

Now it is time for the family to eat the nice breakfast Mother has prepared. After breakfast the cows and sheep are turned out to pasture, Father puts the dirty straw from the barn into a wagon, and Johnny helps him hitch the horses to the wagon to pull it away. Peggy and Janet help Mother feed the chickens and ducks then they help Johnny feed his rabbit families. The white rabbits have pink eyes; the baby rabbit Peggy holds is soft and brown with red eyes.

Janet and Peggy rest after dinner, but not for long, they are soon playing with Trixie and her puppies. Peggy especially likes one puppy but she is too polite to ask if she may take it home with her. On the pony Johnny has saddled the girls ride past the pond where the ducks are paddling from one place to another with their webbed feet and using their beaks to take food from the water. Cows and sheep are in the pasture eating and resting. The cows will soon have enough milk for the afternoon milking. All of the sheep are not in the pasture. In the barnlot a man is cutting the heavy wool from one of them.

The ride over and the pony returned to Johnny, the girls are ready to help Mother again. They gather eggs from the nests that are empty in the henhouse and do not bother the hens on the other nests. Mother gives the girls permission to play with the new kittens now old enough to have had their eyes open only a few days. Peggy is delighted when she is told she may take her favorite kitten and puppy home with her. She hopes her mother will also give her permission to keep the baby animals when she comes to the farm to eat supper with the family and to take Peggy home.

#### APPRAISAL

Pre-school and primary-grade children whether from the country or city can easily identify themselves with either Janet or Peggy or partially with both—Peggy who is allowed to ride on the pony and hold the soft and

alive baby animals in her arms or Janet who already knows the feelings Peggy is experiencing and enjoys sharing them with her friend. Children will especially enjoy seeing and watching for the farm animals they know as well as seeing those less familiar to them. The many baby animals included in the film will appeal to the young audience. **STORY OF PEGGY AT THE FARM** will be more effective if the children are familiar with the names of several animals or the animals themselves from their own experiences, their storybooks and readers, or from discussion and pictures. The film may be used to culminate a study

of the farm, to prepare for a class visit to a farm, or to summarize such a visit. After seeing the film the children will be interested in telling their personal experiences, doing creative art work such as a farm mural, or setting up a model farm of their own using toy buildings and animals or paper cut-outs. Because inclusion of so many animals within the length of the film has resulted in faster pacing and somewhat abrupt breaks in the continuity between sequences, teachers may find the film more effective as a culminating or summarizing experience rather than an introductory one.

# SOUND advice

about audio materials  
and equipment

by MAX U. BILDERSEE

With the Christmas Season practically upon us, teachers and students are looking for desirable seasonal programs for class exercise and entertainment. One which will be enjoyed every year is the classic story of Ebenezer Scrooge as told by Charles Dickens in "A Christmas Carol." There are several delightful recordings of this oft-told story and one of the best is "A CHRISTMAS CAROL" (Decca Records, DLP 8010) in which Ronald Colman plays Scrooge. This is an adaptation quite suitable to school use which will hold the attention and interest of all students. A somewhat longer, more detailed treatment of this classic story is found in "A CHRISTMAS CAROL" (Camden Records, CAL 137) which is adapted, produced and narrated by Ernest Chappell with Eustace Wyatt portraying Ebenezer Scrooge. The longer version stays closer to the story as it was written by Charles Dickens and will undoubtedly be the better selection for your class of older students. But in either case, your choice will be good, affording pleasure and information to your listening classes.

Secondary school students will find pleasure in listening to the "flip" side of the Ronald Colman "A Christmas Carol" which contains "MR. PICKWICK'S CHRISTMAS" as narrated by Charles Laughton. In fact, it might be well to obtain Decca's DLP 8010 to have both of these stories available for secondary school students and Decca's ED 675 for the elementary school, that being only "A Christmas Carol," but on four sides of 45 rpm records, rather than on one side of a 33.3 rpm disc. Add to this the Camden CAL 137 mentioned above and you have variety to meet the needs and interests of all of your students.

The Laughton reading of "Mr. Pickwick's Christmas" is a delightful rendition of the high-hearted and humorous Dickens story, recounting as it does our common Christmastime experiences when we all try to get together with parents, children, brothers, sisters and friends to revel in the warmth of good-will.

Charles Tazewell's two Christmas stories may become classics familiar to

all children (and all adults, too) and loved by them. He has written the charming "THE LITTLEST ANGEL" and the delightful "LULLABY OF CHRISTMAS" (Decca Records, DL 8009) and both are suitable for introduction into the elementary school where the spirit and meaning of Christmas is discussed in the course of seasonal programs. These afford both instruction and entertainment of a very high order. Loretta Young reads "The Littlest Angel" with artistry and tenderness such that the story comes alive with her telling.

Gregory Peck reads the "Lullaby of Christmas" with equal tenderness. This story was first heard in 1948 when it was part of a seasonal broadcast — and it has since been repeated regularly in a developing Christmas tradition. This is a story that calls for no highly emotion acting, no trickery, no spine-tingling dramatic reading. It is simplicity and beauty and is therefore no slight challenge to even so talented a reader as Gregory Peck. Having both human and artistic values, the "Lullaby of Christmas" is a tribute to the professional genius of both writer and reader, and a source of pleasure to the listener.

The setting is Bethlehem — in the Inn — on the days preceding the birth of Jesus and involved the difficulties of the little dumb child known only as "Ayou" who found solace in such natural phenomena as the rustling of the leaves, the song of the wind and the trilling of the brook as it raced over pebbles. In the story the unfortunate boy's difficulties are recounted in detail, to the climactic moment when he gains the power of speech miraculously and greets the infant child of Joseph and Mary.

This recording will elicit a sympathetic response from children, perhaps motivating them to express the story in pictures, and is therefore recommended for elementary schools.

Oscar Wilde was not best known for his children's stories, yet there are two which can be useful in school for story telling purposes, and which can be well used in this season of the year. First, there is "THE SELFISH GIANT" (Decca Records, CU 116)

Sound advice for every recordist  
who wants...

## TIME-AND-A-HALF for OVERTIME

When recording time runs over  
the capacity of your machine,  
you can increase it by 50% with  
either of two types of Longer  
Recording Audiotape

- One for maximum strength
- One for maximum economy

Fortunately, LR Audiotape offers a simple solution to the "overtime" problem. It gives you 50% more recording and playback time on a single reel. LR Audiotape also assures you of the same performance and quality that have made Audiotape the first choice of critical professional recordists the world over.

The same coating formula is used on both types of LR. The only difference is the base material. LR Audiotape on 1-mil Mylar\* gives

you high strength, immunity to heat and moisture, and freedom from embrittling with age. Plastic-base LR Audiotape gives you the same longer recording time on a low cost 1-mil cellulose acetate base.

Whatever the requirements of your "overtime" recording jobs, ask for LR Audiotape. For information on the complete Audiotape line—five different types for every recording need—write for Bulletin No. 250.

\*DuPont Trade Mark

**audiotape** *it speaks for itself*

AUDIO DEVICES, INC., 444 Madison Ave., New York 22, N. Y.

Offices in Hollywood and Chicago • Export Dept.: 13 East 40th St., New York 16, N. Y.

which will delight the younger listeners. This is told by Frederic March and to the recording he brings the same directness and lack of affectation which have characterized his brightest theatre and screen achievements. He makes the story of "The Selfish Giant" one which will be loved by children — and their teachers as well.

Although not so directly seasonal in character, "THE HAPPY PRINCE" (Decca Records, CU 115) is another fairy tale which sharply draws the line between the selfish and the generous. Children will enjoy this recording, too, although the story is essentially sad and the ending a decidedly unhappy one. Bing Crosby, as the Prince who lived solely for pleasure, gives a very convincing performance. Orson Welles, as narrator, offers a good contrasting voice which is readily recognized. The performance is wholly simple and unaffected. and the recording will appeal to the listening youngsters in the lower grades.

Much of the realism, horror and bravery which make up the human background of war is portrayed vividly in "D-DAY: INVASION OF EUROPE" (Enrichment Materials, ERL 113). More mature elementary school students and junior high school pupils will enjoy, learn from and be satisfied by this recording and by "JOHN PAUL JONES" which is on the reverse

side of this disc.

Students will hear the Allied forces being given their final briefing before boarding the landing ships, and will participate through the eyes and ears of Jim Kent, a fictional war correspondent, and Lieutenant Moody in the landing on Omaha Beach and the desperate but successful efforts to scale the protecting cliffs of this portion of the Normandy coast. On the occasion of the Victory Parade the two major characters meet again and recall General Montgomery's words, "To us is given the honor of striking a blow for freedom which will live in history. . ."

Maintaining a fine record for authenticity, the record jacket supplied by Enrichment Materials proclaims, "The content of this record has been approved by the office of the Assistant Secretary of Defense, Washington, D. C."

The recording "John Paul Jones" is a bright and interesting presentation detailing many of the adventures of one of America's greatest naval heroes. Students will be present as the young Lieutenant Jones raises the first American naval ensign and sails into battle against units of the British Navy. As commanding officer of the "Providence," then the "Ranger" and later the "Bon Homme Richard" John Paul Jones will be joined by the listening students as he captures a fishing fleet,

delivers the news of Burgoyne's surrender, captures the British warship "Drake" and later the might "Scrapis."

Bill Bonyun, who has developed a following as the "Pied Piper of Old Sturbridge Village" offers four typical Yankee tall-tale ballads on "LET'S GO A-HUNTING" (Heirloom Records, HL EP 501), a 45 rpm extended play disc containing "Billy Barlow," "The Codfish," "We Hunted and We Halloed," and "Three Little Pigs." These are all sung in the open and carefree style developed by Bill Bonyun who accompanies himself on the guitar. According to Bill Bonyun himself, the songs on this record are some of the special favorites of the thousands of boys and girls who have enjoyed listening to him either in Old Sturbridge in the schools he has visited across the nation. These are gay songs — joyous songs — but they are not non-sense songs. The story they tell is the ever important one of man's search for food — and of man's ever present sense of humor despite hardship, need and difficulty. Children in the intermediate grades will enjoy this recording thoroughly, and on second and third hearing will be tempted — and should be encouraged — to join in and sing with the troubador.

Records for review should be sent directly to Max U. Bilderssee, 36 Hohnes Dale, Albany 3, New York.

# Colorful Photoplay Filmstrips

Prepared by William Lewin, Ph.D.

Shows the functional services of the U. S. Dept. of Agriculture and the cooperative assistance rendered by the landgrant colleges and universities, by state agencies, and by American industry.

**Alfalfa Story** mp CASC 30min col loan. Traces the history of alfalfa from its origin in Persia up to its production, utilization, and research in the U. S. Shows projects underway to control alfalfa diseases and insect pests. Value of alfalfa.

**Atomic Age Farmer** mp AEC 12min sd b&w free. Applications of atomic energy research in agriculture, including studies of the effects of radiation on life processes of livestock and on growth of corn and the production of radioactive compounds from an isotopes farm.

**Atomic Greenhouse** mp AEC 13min sd b&w free. Use of radioisotopes to trace fertilizer absorbed from the soil into a plant thereby determining the more efficient use of the fertilizer.

**Businessman on the Farm** mp MM 20min sd col free. The various roles of today's farmer — as an expert on soils, animal husbandry, weather, chemicals, equipment maintenance, purchasing, bookkeeping, marketing, safety, and production.

**County Agent** mp TEXAS 27min sd col free. Work of typical county agents in different parts of the country.

**Farmer Cooperatives Today** mp USDA 20min sd col. Report on farmer cooperatives, what they are, the jobs their members call on them to do, and how they do them. Outlines the many types of cooperatives the farmers have set up and the kinds of services they perform. Available for loan from Farm Credit District Offices.

**4-H Trail** mp UC 28min sd col \$250 b&w \$110 r\$4.50-\$6. Describes the many opportunities and the flexible program offered the 4-H member and illustrates the cooperation of the community with the 4-H program and the manner in which both benefit.

**Irrigation** mp YAF 15min sd b&w \$75. What irrigation is, how it is accomplished in the Southwest, and what it means to the land and those who farm it. Int.

**Materials Handling** fs SF 71fr si b&w \$4.95. Shows easier, more efficient ways of handling hay, silage, grain, water, manure, and materials farmers

buy; how ordinary equipment in use on most farms can be readily adopted for other uses to lessen farm work; development of new materials-handling equipment by colleges and industry.

**Partners** mp AIC 29min sd col free. Story of a farmer and his cooperative and how farmer cooperatives benefit everyone the country over.

**Poultry Hygiene: Refrigeration** fs USPHS 11min sd col free loan. Follows processed bird through the plant to the retail market, outlining the refrigeration temperatures and procedures during processing, storage, and transport.

**Poultry Hygiene: Waste Disposal, Clean-Up and Basic Sanitation** fs USPHS 12min sd col free. Essentials of waste collection, holding and disposal, the time and procedures for clean-up of processing rooms and equipment, and basic sanitation in the poultry processing plant and on the premises.

**Raising Hogs the Market Wants** mp NFBC 16min sd col \$120 b&w \$80. Feeding and management programs developed at the Central Experimental Farm at Ottawa, Canada, to insure production of lean bacon-type quality hogs.

**Rival World** mp SHELL 27min sd col free. Development of agricultural insecticides and their use in combatting insect pests.

**Saving Little Pigs** mp UP 10min sd col free. Care and preparation of the sow during the confinement period and the facilities necessary to avoid crushing of the newborn pigs, providing warmth, and preventing diseases.

**Southern Farming** mp CASE 20min sd col free. Production of cotton from seed to finished cloth; fruit and vegetable culture; livestock production.

**Stem Rust** mp USDA 14min sd col free. How barberry bushes spread this airborne, fungus disease to wheat, oats, barley, and rye; effects of stem rust on these plants; methods of control.

**Story of Oats and Oatmeal** mp MOD 27min sd col free. The growing of oats depicted including scenes using time-lapse photography.

**Things Keep Changing** mp SINCLAIR 40min sd b&w free. Story of a farm family, its problems, and how they were solved.

**This is the Farmers Union** mp NFU 28min sd b&w \$30. Portrays the National Farmers Union from its origin in Point, Texas, more than 50 years ago to its present day operations. Particular emphasis on legislative program.

**Tomatoes: Planting and Transplanting** mp TABLETOPPER 9min sd col. Seeding of tomatoes in flats; development of plants to transplanting in milk containers, transplanting to the outdoor garden.

**Tree Bank** mp USDA 13min sd col & b&w free. Values of tree plantations in

conserving soil and water, in providing shelter for wildlife and recreational opportunities for the farm family, and as a source of additional farm income; shows nursery and tree-planting practices and types of cropland eligible for planting in trees under the Conservation Reserve of the Soil Bank.

**Why Grow Fat Hogs?** mp NFBC 14min sd col \$120 b&w \$80. How careful breeding has resulted in a type of hog that nets the greatest profit in Canadian pork products; examination of various cuts; desirability of raising lean rather than fat hogs.

**World's Apple Bowl** mp IDEAL 12min sd b&w free. Shorter version of "Washington State: Appleland" showing early spring orchard operations, care of fruit during growing, and the harvesting, packing, and shipping of apples.

## ARMED FORCES

**Admiral Burke Takes Command** mp USN 12 min sd b&w free. Highlights of change of command speeches at Annapolis by the Secretary of the Navy, Admiral Conroy, and Admiral Burke as the latter is sworn in as Chief of Naval Operations.

**Airborne Soldier** mp USA 33min sd b&w free. Basic paratrooper training course as given at the Airborne School, Ft. Benning, Ga., from the time the trainees arrive to completion of training and wing award ceremony.

**Class of '59** mp USAF 14min sd b&w free. Purpose and program of the U.S. Air Force Academy at Lowry Air Force Base, Colorado; what is expected of a cadet, requirements for entry, places to seek appointment.

**Cold Logic** mp USMC 14min sd b&w free. Preparation of all Marines for cold weather fighting and survival.

**Field Training for R.O.T.C.** mp USA 48 min sd col free. A typical summer camp at Ft. Benning from the time of arrival to graduation.

**Ground Safety on the Flight Line** 2mp USAF 10 & 14 min sd col free. Part I deals with refueling procedures, jet fuels as opposed to gasoline, dangerous vapors, friction and static electricity, driving on flight line, maintenance musts and precautions, and jet aircraft noise. Part II shows a B-47 burning and traces the step-by-step procedures of the investigating board to determine the reasons for this three and one-half million dollar loss with two men killed.

**Heart of the Navy** mp USN 15min sd b&w free. How the Navy takes time out from military activities to help children and other people who are victims of earthquakes and flood.

**Highest Ideals** mp NEBRASKA 27min sd col \$200. Origin and purpose of the Pershing Rifles, a national honor society which grew under the patronage of the late General John J. Pershing.

**A Look at Your Army** mp USA 12min sd b&w free. A personal message from General Maxwell D. Taylor, Chief of Staff, U.S. Army, to every American soldier and citizen. General Taylor's remarks have to do with a career in the Army. Army activities and organization depicted.

**Marine Air Reserve Technical Indoctrination** mp USMC 14min sd b&w free. Recruit activity at a Marine Air Sto-

## How to keep them ready to Look... Listen... and Learn

Use a Kodoscope Pageant Sound Projector, 16mm, to start the show on time—every time.

Distracting delays that cause restless classes become a thing of the past when you use a Pageant Projector, with Kodak's new single-switch reversing.

You can begin every show smoothly, with sound and focus adjusted, by screening the first few feet of film on the Pageant before show time. Check sound and focus, flip the switch to *reverse*, and back up to the first title frame.

The movie begins with the titles, as it should. Sound is set for best volume and tone. The picture is centered and sharp.

### Safer, surer projection

Single control simplicity makes student operator training easier, reduces film damage due to lack of experience.

Single-switch reversing is just one of the many Pageant features. Before you buy *any* machine, ask:

1. Does the projector have single-switch reversing? (Like the Pageant)
2. Is it easy to set up? (Pageant reel arms fold out, with belts permanently attached; film path is easy to follow.)
3. Is sound reproduction what it should be? (Pageant amplifier is true-rated, 7 or 15 watts, has both tone and volume controls; scanning of sound track is precise; speaker is well baffled.)
4. Does the projector need oiling? (Pageants *never* need oiling; permanent factory lubrication ends the most common cause of projector breakdowns—improper oiling.)

To learn the whole story, see and hear a Pageant in action. You have 3 models to choose from.

This single reverse switch lets you rerun scenes at will, adjust sound and picture before show time. Makes Pageant simple to run, too.

**Kodak**  
TRADE MARK

EASTMAN KODAK COMPANY, Dept. 8-V, Rochester 4, N. Y.

tion during a 30-day training period during summer months for high school graduates who have joined the Marine Corps Air Reserve.

**Medical Minute Men** mp USAF 9min sd b&w free. The civilian physicians, dentists, nurses, specialists, and technicians who spend two weeks each year at an Air Force hospital to gain new techniques of medical operation.

**Mission of the United States Marine Corps** mp USA, USAF, USN 27min sd b&w free. Mission and organization of the Marine Corps discussed by General Randolph McCall Pate, Commandant of the Marine Corps.

**Pipeline in the Sky** mp USAF 29min sd col free. Air lift service of the USAF Air Logistics Service in transporting necessary parts, medicine, food, supplies, and equipment overseas.

**Quality Control** mp USAF 25min sd b&w free. Responsibility of the Quality Control Function of the Air Materiel Command with respect to procurement, supply, and maintenance. Shows inspection of materials, shipping, storing, and assembly at North American Aviation Inc.

**Service to the Fleet** mp USN 15min sd b&w free. Edward R. Murrow describes the activities of the Navy service forces in supplying all items, from a pound of coffee to a 16" shell, to maintain the Sixth and Seventh fleets, thousands of miles from any fixed supply base.

**Your Future and the New Reserve Law** mp USA 12min sd b&w free. Designed to interest teen-age youths in joining the Army Reserve; defines the provision of the new Reserve Forces Act of 1955; shows how a reservist is trained

in military skills, covering the 6-month active duty period and subsequent training at local military reserve units.

## ARTS AND CRAFTS

**Art Council Additions** sl **Arts of Melanesia**, 31 slides \$21; **Arts of New Guinea**, 34 \$23; **Arts of Polynesia**, 25 \$17; **Asian Shadow Theatre Puppets**, 28 \$19. All slides in 2x2 Kodochrome cardboard readimounts.

**Audubon and the Birds of America** mp CORONET 16min sd col \$150 b&w \$82.50. The life and works of John James Audubon are unfolded as his youthful beginnings in America are recreated, his struggles to resolve repeated business failures with an intense interest in painting wildlife, his decision to dedicate his life to his art, and his eventual triumph in the publication of *The Birds of America*. Int.

**Autumn Fire** mp CONTEMPORARY 17 min si b&w \$100 r\$10. It is a poem in which the body of a woman and the leaves of the trees swing in the same sensual rhythm — an early American experimental film, one of the very first.

**Felt Pen Sketching** mp YAF 10 min sd col \$100 b&w \$50. How the common felt-point marking pen can be used in a variety of ways for sketching.

**Festival in Solvang** mp NEUBACHER 15 min sd col \$135. Danish-American town of Solvang, California, celebrating its annual festival: folk dancing, aebleskiver breakfast, arts and crafts. Int.

**French Drawings from Toulouse-Lautrec to Picasso** 66sl LAMBERT \$16.50. Bonnard, Lo Fresnaye, Maillol Mar-

quet, Matisse, Modigliani, Seurat, Toulouse-Lautrec, Suzanne Voladon, Vuillard, Braque, Chagall, Delaunoy, Derain, Despiiau, Dufy, Dunoyer de Segonzac, Gonzalez, Juan Gris, Laurens, Leger, Metzinger, Picasso, Villon.

**How to Make a Christmas Wreath** fs VEC 17fr si b&w \$3.50. Step-by-step procedures for making wreaths from simple, inexpensive materials in four class periods or one full afternoon.

**How to Make a Picture Frame** fs VEC 21fr si b&w \$3.50. Steps in making simple, inexpensive picture frames while encouraging precise and accurate work and creative expression.

**Laguna Beach Festival of Arts and Pageant of the Masters** mp CHRISTIAN available in 12 and 24 min versions, col \$185 & \$95 b&w \$85 & \$45. Shows world's great art recreated by living models.

**Leonardo Da Vinci: Giant of the Renaissance** mp EBF 25min sd col \$225 b&w \$112.50. A biographical film. JH.

**Meaning in Child Art** mp PCR 10min sd col \$100 r\$3. How sensitive relationships of children to themselves and their environment can be developed in children's art classes. Average work, such as all children can produce, has been randomly chosen to show how much the child can become bound up with his own expression.

**Painting Shadows** mp EBF 11 min sd col \$100. An important addition to the Eliot O'Hara art series, the film clearly relates the physical laws of light to the specific requirements of the art student. Besides demonstrating effective techniques for painting shadows in water color, Mr. O'Hara helps the student find his own way as an accurate observer and interpreter of nature. SH.

**Painting with Calligraphy** mp EBF 12min sd col \$100. Shows how picture-writing developed into a coherent written language. Examples of calligraphy shown in Egyptian hieroglyphics, the Mexican calendar stone, the petroglyphs of cliff-dwelling American Indians, and the symbolic characters in Oriental script. Shows use of calligraphy as a device for adding richness and detail to a subject and for simple adornment. Closing scenes show modern uses of calligraphy and paintings by Burchfield, Dufy, Van Gogh, and O'Hara using the technique. SH.

**Paper in the Round** mp YAF 10min sd col \$100 b&w \$50. Demonstrates and explains how paper of various colors and textures can be scored, cut, bent, curled, shaped, slotted, and tabbed to make many different objects, with cylinders and canes as basic forms. Int.

**Potter** mp USC 13min sd col \$100 r\$4. Study of the pottery craftsman at work, illustrating the use of the potter's wheel and methods of developing originality and variety in pottery-making. SH.

**Stained Glass Windows** sl LAMBERT 30 for \$7.50. Some of the most beautiful stained glass windows of the 12th to the 16th centuries in French cathedrals and churches.

**Story of Painting** mp ALMANAC 23min sd b&w \$125. Evolution of styles in painting; techniques involved in tempera, fresco, and oil painting; impor-

# CREATIVE CRAFT

## Five Classroom-Tested Films...

Produced by Ruby Niebauer, Art Supervisor, San Diego State College, in order to assist elementary, secondary, and college teachers in their efforts to bring challenging, worthwhile creative activities to their classrooms with little or no cast. Organization, planning, skills and attitudes, as well as safety measures, are considered in working with materials.

- HOW TO MAKE A MASK, 10 minutes, Color sale \$100.00, rent \$5.00; B & W sale \$50.00, rent \$3.00.
- HOW TO MAKE PAPIER MACHE ANIMALS, 12 minutes, Color sale \$112.00, rent \$5.00; B & W sale \$50.00, rent \$3.00.

# POSITIVE FILM PROTECTION

*with CompcO Reels and Cans...*

**ASSURES LONGER FILM LIFE—  
EASIER PROJECTION**

**A COMPLETE  
RANGE OF SIZES**

*All individually boxed  
for added protection*

## Amateur REELS & CANS

Same basic all-steel construction as professional reels, precision made, attractively finished — but in smaller sizes. CompcO amateur reels have exclusive, specially designed film “clip” that permits easier, “instant” threading and completely eliminates slippage. Ends annoyance of trying to slip film into tiny slots. You can actually thread in the dark. Clip holds film firmly and automatically releases film when unreeling.

Durable matching cans are also available, complete with identification labels backed with special adhesive.

## Professional REELS & CANS

Films just “flow” through your projector without binding and rubbing when on a CompcO all-steel reel. Precision made of tempered spring steel and die-formed sides — they won’t “warp” or bend out of shape. They help prolong the life of valuable film and insure smoother projection.

All CompcO reels can be supplied with matching, scratch resistant all-steel cans. Have attractive baked-on hammertone gray enamel finish with “precision fit” covers. Complete with identification labels with special adhesive backing.

### ● PROFESSIONAL SIZES

# BRING the WORLD

\* and other worlds, too! See EBF's "A Trip to the Moon", in color - 16 minutes.

**T**HE YEAR just passed has been our greatest ever. More EBFilms were purchased —more EBFilm libraries started and more EBFilms rented from the great state and university libraries than ever before.

EBF production units, both here and abroad, using advanced and costly new photographic techniques, have achieved the production of 62 of the finest classroom films ever produced. EBFilms have been correlated with more than 300 of the most widely used textbooks of the major publishers, in all major areas of the curriculum.

EBFilms will continue to dedicate its efforts towards the wider use of classroom films and to set even higher standards for their production.

tance of control of materials in painting; how materials have influenced style and expression. SH.

**Van Gogh: Darkness into Light** mp MH 20min sd col \$100. Contrasts the vivid colors of Vincent Van Gogh's paintings with the actual Belgian, Dutch, and French scenes which inspired him. In doing this it shows the many problems confronted by a motion picture company (MGM) when it filmed "Lust for Life," a biography of Van Gogh. Dore Schary narrates the film.

**World of Mosaic** mp UC 28min sd col \$300. From Sumerian, Greek and Roman, through Byzantine and Aztec, the evolution of mosaic is shown moving toward the present renaissance in Mexico and the U. S. Climaxed with a presentation of America's accomplished muralist, Joseph Young, creating the famed mosaic in the Los Angeles Police Building. Narrated by Richard Widmark with music composed by Eugene Hemmer.

## BUSINESS EDUCATION

**Building Tomorrow's Leaders** fs JA 20min sd col free. Story of the far reaching effects of Junior Achievement on the teen-agers of America, showing how young people learn about business by being in business for themselves. The benefits of Junior Achievement to the teenagers, to the business advisers who counsel them, and the overall impact on the community are outlined.

**Business Methods for Young People** fs VEC 25fr si b&w \$3.50. Encourages accurate, up-to-date business methods for the young earner; discusses advantages of a budget and how to prepare one; proper methods of writing checks; checking accounts. JH.

**Communications Casebook 4** mp STRAUSS 10min eo sd b&w. Adopted from *The Inner Man Steps Out*, the purpose of the kit is to help executives and supervisors increase their ability to gain understanding and acceptance from the people they deal with of their own actions and management's policies and practices. Giving orders, correcting poor performance, straightening out troublesome situations, developing the desire to accept new responsibilities, passing information up and down the line, and other topics are dealt with.

**Electronic Computers Improve Management Control** mp CALIFORNIA 20min sd col \$150 r\$10. Presents a predicament in a typical manufacturing organization when a large customer order is cancelled because of delays in production. History of the order is traced. The culprit is found to be paperwork delays with resulting lack of management control. A proper production control system through the use of modern business machines is then pictured.

**Engagement Party** mp STERLING 30min sd col free. Modern business methods in retailing with special emphasis on the use of trading stamps.

**How to Up Soles by Better Sales Supervision** mp UWF 30min sd b&w sale. Borden and Busse, sales training specialists, in a new demonstration for sales supervisors.

**Keys to the Future** mp STERLING 30min sd col free. Value of the typewriter to every member of the family; importance of being able to type.

**Of Time and Salesmen** mp MODERN 35min sd b&w free. Suggests how salesmen may plan their working day in order to get the most effective use out of the time spent in calling and interviewing customers.

**Till Debt Do Us Part** mp CUNA 14min sd b&w \$125 free loan. How a couple already in the divorce court find a way to save their marriage and to solve their financial problems (the cause of their difficulties) through learning to work together with the help of a credit union.

**You're on the Team** mp Eastmon 15min sd b&w free. Demonstrates procedures to be followed in a bulk-mailing operation and its importance to the over-all sales and advertising of a company.

## CIVIL DEFENSE

**Civil Defense Problem** mp USA, USAF, USN 30min sd b&w free. Val Peterson, Federal Civil Defense Administrator, discusses problems and activities of civil defense with particular reference to the post-attack and pre-attack phases, touching briefly on Civil Defense in Europe.

**Effects of Atomic Bomb Explosions** mp UWF 22min sd b&w \$39.70. Effects of explosions at Nagasaki, Hiroshima, and the Pacific testing range as well as theoretical effects of ground contact and underground explosions.

**First Aid for Burns in Civil Defense** mp ANRC 17min sd b&w free. Demonstrates first aid care for burns in the event of large scale casualties.

**Let's Face It** mp USAF 15min sd col free. The fury of an atomic blast and the rules for survival following an atomic or hydrogen attack.

**Operation Lifesaver** mp NFBC 15min sd b&w \$80. Record of the evacuation of a sector of the city of Calgary, Alberta, as an exercise in its civil defense program. Shows meticulous block-by-block, house-by-house, person-by-person planning that preceded the operation; orderly withdrawal; care of displaced persons at reception centers.

## EDUCATION

**And So They Grow** mp CAMPUS 28min sd col \$200 b&w \$75 r\$6-\$10. Role of the leader in a play program showing the variety of approaches employed in meeting children's ever-widening interests—a real life study of a group of nine-year-olds taken over a period of one year.

**Building for Learning** mp TEXAS 19min sd col free. Coordinating school building construction with modern techniques of education to make the most of light, air, sound, function, and structure.

**Elementary School Children: Each Child is Different** mp McG-H 17min sd b&w \$95. A glimpse into the lives of five children in a fifth grade class, showing that each life constitutes a complex and unique pattern shaped by many influences in home and community. The teacher must determine what these influences are in order to better plan an educational program for each child.

**Elementary School Children: Discovering Individual Differences** mp McG-H 25min sd b&w \$135. A fifth grade teacher uses observation, cumulative records, behavior journal, discussion

with other teachers, interviews with parents, and staff conferences in studying the background, abilities, and needs of each pupil in her class.

**Individualizing Reading Instruction in the Classroom** mp TC 20min sd b&w \$90 also rental. Advantages of an individualized approach and its essentials.

**Kindergarten Way is to Learn Each Day** fs BOOKS 20min sd col. Explains benefits of dramatic play, manipulative activities, show and tell, educational trips, and storytelling. Kit includes 20 minutes double-faced LP recording, 60fr filmstrip, complete script and sketches, discussion sheet. \$14.

**Life Situation Films for Hearing-Impaired Children** 5mp USC sd col \$225 or \$50 ea r\$3.50-\$15 b&w \$94.50 or \$24.50 ea r\$2-\$7.50. Provides extra opportunities for talking, observing other people talk, and actively participating in a variety of life situations at home, school, and with playmates. Stresses on gestures and expressions. **Tommy's Table Manners, Lesson in Magic, Little Cowboy, Barbara's New Shoes, Bow-Belinda.** Pri.

**Meaning in Child Art** mp PCR 10min sd col \$92 r\$3. How sensitive relationships of children to themselves and their environment can be developed in children's art classes; illustrates the philosophy in teaching art to children that the process is more important than the product; how children develop in their understanding and growing sensitivity to both environment and means of expression — with proper motivation.

**Mounting Pictures** fs TEXAS si col \$4. Mounting for displays, opaque projection, filing or to pass out. Considers selection of mounting boards, steps in mounting with rubber cement and dry mounting tissue, ways of protecting pictures.

**Problem of Pupil Adjustment: The Drop-Out** mp McG-H 20min sd b&w \$95. The nature of a high school program which led one pupil to drop out of school as soon as state law permitted. A life adjustment program is suggested as desirable in this school's program.

**School Building Filmstrip—1956** fs NEA 120fr b&w \$5. Photographs and art work present floor plans, excavations, plat plans, classroom layouts, and other features of new school buildings as displayed in the annual exhibit at Atlantic City.

**School Buildings and Equipment: I and II** 2fs ACE 55-58fr si b&w \$6. Current trends in elementary school buildings and equipment needed to support modern educational programs shown in Part I. Part II deals with the comprehensive high school.

**The Search: Harvard University** mp YAF 25min sd b&w \$125. How researchers in a Massachusetts community follow children through a school day to determine the adequacy of school facilities and what is needed from the child's point of view. Teachers and parents are interviewed. Data is analyzed and recommendations made.

**Three R's Plus** mp MH 27min sd cal \$220 b&w \$110. Natural classroom scenes point up all the pluses that have been added to the elementary curriculum in the last few years—the 'plus' goals in teaching the three R's, the subjects that are now taught in addition to reading, writing, and arithmetic, and the extra-curricular activities in dramatics, music, and student government. Also covers the special teaching programs adapted to the physically handicapped, the slow learners, and exceptional children.

## FEATURES

**Additional M-G-M Feature Films Available** 216 mp FILMS. **Above and Beyond** (Robert Taylor, Eleanor Parker), **Across the Wide Missouri** (Clark Gable), **The Actress** (Jean Simmons), **Adam's Rib** (Spencer Tracy, Katherine Hepburn), **Adventures of Huckleberry Finn** (Mickey Rooney), **All the Brothers Were Valiant** (Robert Taylor, Stewart Granger), **Ambush** (Robert Taylor), **Anchors Aweigh** (Frank Sinatra), and many others.

## GUIDANCE - SOCIAL

**Anger at Work** mp IFB 21min sd b&w \$125. Explains the displacement of anger onto other men and how this impairs efficiency in everyday living. Five incidents show some of the techniques people have developed for handling anger, resentment, and frustration.

**Beginning Responsibility: Being on Time** mp CORONET 11min sd col \$100 b&w \$55. Jimmy, who misses out on things because he is not on time, observes firemen and train engineers and realizes how important it is to come when

called and to be prompt. He learns that he can help himself by getting ready in advance and by estimating how long it takes to get things done. Pri.

**Beginning Responsibility: Other People's Things** mp CORONET 11min sd col \$100 b&w \$50. Broken playground swings lead a primary-grade classroom into activities that illustrate the way in which public and private property, as well as articles that are borrowed or found, should be cared for.

**Courtesy at School** mp CORONET 11min sd col \$100 b&w \$55. Courtesy, Jerry discovers, means thinking of others. He and his classmates learn that being courteous helps them enjoy their work and play — in the classroom, the cafeteria, the auditorium, the hallways, and on the playground. Int.

**Guidance Stories** 6fs EBF col \$36 ea \$6. Each story presents a guidance problem important at the age level of the primary grades, showing attractive youngsters in the principal roles: **Sharing with Others, Playing Fair, New Friends—Good Friends, One Kind of Brovery, Taking Care of Your Things, Sticking to Your Job.** Pri.

**Helping Johnny Remember** mp PORTAFILMS 11min sd col \$100 b&w \$57.50. Dramatizes problem of a boy rejected by other children because he is selfish, uncooperative, and damning. He is accepted back when he develops a real desire to be courteous and considerate and makes a determined effort to develop courteous habits by constant practice with the help of the group — until he can be courteous automatically. Pri.

**Kid Brother** mp MHFB 25min sd b&w \$145. Explores some of the hidden emotional forces that lie behind excessive drinking. Reveals that behavior problems which appear on the surface to be concerned with alcoholism may, in young people, be an expression of the many difficulties that adolescents face in adapting to the world around them. The film also depicts the social pressures that are put on young people to take a drink — both by their own group and by adult example.

**Kindness to Others** mp CORONET 11min sd col \$100 b&w \$55. Kindness and how one can be kind to others are things Sam's class begins to learn on the very day he becomes ill and is absent from school. Everyone in class remembers Sam's kindness to family, playmates, and animals. Sam's classmates find the pleasures that come from practicing kindness. Pri.

**Let's Discuss It** mp NFBC 29min sd b&w \$120. Presentation of group discussion methods, demonstrating the principles by which a healthy and active discussion group can be maintained; right and wrong ways; organizing a group; work of the discussion leader.

**Living Together** 6fs SVE sd col \$31.50 ea \$5.50. Experiences and activities characteristic of the 5-8 age group in the social studies area. First part of each strip is captioned and presents the story or instructional material. The second part which is not captioned provides opportunity for story retelling and discussion. **Jim's Family** (32fr), **Day at School** (36), **Family Helpers** (47), **Neighborhood Picnic** (45), **Family Shopping Trip** (52), **Ride in the Country** (50). Pri.

**Potty Gorman, Teen-Ager** mp FRITH 16 min sd col \$130. Teen age group experiences sewing, entertaining, presenting topics to their club, or showing animals at 4-H Club Fair. Designed to stimulate constructive, healthy attitudes towards others. JH.

**Production 5118** mp MOD 30min sd col free. A dramatic story of the problems of understanding one another — communication.

**Proud Years** mp CMC 28min sd b&w \$125 r\$7. Shows in detail the practical steps that can be taken to help old people lead active useful lives. Provides a means by which the aged and their families can explore together the day-to-day problems that accompany old age.

**Segregation in the Schools** mp McG-H 28min sd b&w \$112.50. A "See It Now" TV report on the reactions of civic leaders, teachers, parents, and students — negro and white — in two Southern cities to the Supreme Court Ruling.

## GUIDANCE - VOCATIONAL

**The Apprentice** mp VIRGINIA 12min sd col \$78 b&w \$33 r\$2-\$4. Emphasis on the dignity of working with one's hands and need for skilled technical workers. Shows how apprentices are selected, employed, trained, and where they should go to seek employment.

**Careers in the Building Trades (Basic Skills)** mp COR 11min sd col \$100 b&w \$55. At a summer job on a construction sight, Bob observes a car-

enter, plumber, bricklayer, electrician, plasterer, and glazier at work. He discovers that his interests and aptitudes fit him for a vocation in the building trades. He finds on his return to school that each subject contributes to his vocational interest. JrH.

**Engineering for Eddie** mp OHIO 20min sd col \$140 free loan. How the engineer has brought magic into the American home; engineering as a profession requiring broad backgrounds in the basic sciences, math, and humanities; engineering research; crisis in technical education; problem of man vs machine in the age of automation and in future years.

**Examining the Will to Work** fs STRAUSS 14min sd col \$75. Factors in the "job climate" that most strongly affect individual productivity and what the supervisor can do about them: how a man feels about the job itself, how he feels about the group he works with, how he feels about his immediate supervision.

**Industrial Education in Your Future** mp STOUT 21min sd col free. How a high school student's interest in industrial vocations may be directed toward a college career in industrial education or industrial technology. Depicts technical, academic, and recreational facilities for such programs at Stout State College.

**June Decision** mp OLYMPIA 20min sd col. Surveys engineering opportunities among such railway suppliers as General Motors, Westinghouse Air Brake Co., American Car & Foundry Co., and General Electric.

**Right Touch** mp IBM 18min sd col free. How Joan Martin combines her natural ability with secretarial training to get her first job. Scenes show Joan taking typing, being interviewed and hired, apprenticeship in the stenographic pool, and at work as a private secretary.

**Supervisory Problems in the Office: II** 6fs MH col with 3 LP recordings \$125. Each filmstrip runs about 8 minutes. **Corrective Guidance Talk, Developing Team Spirit, Easing a Disappointment, Making Compliments Count, Overcoming Resistance to New Methods, Rating Employee Performance.**

## HEALTH & SAFETY

**Album of Safety** mp UL 19min sd col free. Work of the Underwriters' Laboratories in testing commercial products. Shows various items being crushed, burned, and otherwise ruined in the cause of safety.

**All of a Sudden** mp MOD 13min sd free. Asks for a mature attitude in using a car as a car and not as an emotional escape valve, a social equalizer, a love seat, or an ego builder.

**Before They Hoppen** mp BCR 14min sd b&w free. Work of an inspector for a municipal fire prevention bureau gives clues for reducing fire hazards in homes.

**Be Healthy, Go Safely—The Primary Way** fs SVE si col. Titles in health set include **Let's Have a Party** (43 frames), **Let's Visit Our Friends** (30), **Let's Get Ready for School** (30), **Let's Stand**

**Story of Silver** mp BRAN 20min sd b&w \$85 r\$4.50. Introduction to the art of silver making showing Danish craftsman George Jensen at work.

# COMPARISON

# PROVES...

# transpaque

## PUTS MORE LIGHT

## ON YOUR SCREEN!

Compare the Transpaque side by side with any other projector on the market. Project the same picture size with each . . . with the same materials, opaque or transparent. You'll find the new Transpaque puts up to *twice the light on the screen* with opaque materials . . . up to *three times* with transparencies.

This means you can use the Transpaque from the front or back of the room, *and even for rear projection*, without putting out lights or drawing shades. Selection of projection lenses from 4" to 40" focal length permits you to use *any* screen at *any* distance.

You can purchase the Transpaque complete for opaque, table, or overhead projection. Or, you can purchase this unit for one type of projection now and add equipment for other uses later. See it demonstrated in comparison with others and you'll be convinced that this is truly the aristocrat of visual communication projectors. Write us to arrange a demonstration for you.

## "OPERATION SURVIVAL"

17 minutes

The whole interesting story of air survival equipment — parachute, life-vest, raft. Their far reaching role in scientific research, military and civilian activities as well as saving of lives. Recovery of electronic flight equipment, famous high altitude rocket tests, etc. An inspirational film for young and old.

## "PACKING & MAINTENANCE OF PARACHUTES"

18 min.

Supplements OPERATION SURVIVAL. Aply demonstrates simplicity of packing the new CHAIN-TYPE PARACHUTE. Shows maintenance and servicing. Includes pack and harness. Film is used by U.S. and foreign governments in training programs. Suggested shown with "Operation Survival."

## "SWAGING"

21 min.

Approved film for instructing metal worker and metal processing student. Describes entire principle in operation of a swager and many types of work performed. Includes pointing, forming and fitting of attachments, etc.

## "IGNITION & SPARK PLUGS"

20 min.

"Standard" teaching film on complete automobile ignition system and component parts, including importance of proper spark plugs, etc. Care, cleaning and servicing. Instructions for mechanics, drivers, especially learners.

Send for list of famous BRAY films on Health, Hygiene and Physiology.

BRAY STUDIOS, Inc., Dept. ES, 729—7th Ave., New York 19, N. Y.

## INDUSTRY

**Aluminum in Modern Architecture** mp ASSOC 14min sd b&w free. Strength, light weight, and adaptability to the principles of sound design are given as reasons for the growing use of aluminum in modern building construction.

**Aluminum on the March** mp ASSOC 28 min sd col free. Story of aluminum, from the mile-high bauxite mines of Jamaica to the mile-long rolling mills of the midwest.

**Atomic Metallurgy** mp AEC 13min sd b&w free. Producing and testing the specialized alloys necessary to the atomic development program.

**At the Drop of a Coin** mp IDEAL 26min sd b&w free. History of vending machines beginning in ancient Egypt; representative modern machines.

**Car is a Woman** mp MODERN 14min sd col free. How to care for a car's cooling system.

**Cattle: Birth of an Industry** mp NEBRASKA 29min sd b&w \$85. Overland Trail herds, Texas cattlemen and the "long drive" North to market; Nebraska cow towns; range cattle industry — its boom and bust; romance of the roundup.

**Drilling for Oil** mp DOWLING 22min sd col \$200. Step-by-step operations of drilling an oil well told through live action and animation; search for new oil pools. Int.

**The Factory: How a Product is Made** mp FA 14min sd col \$125 b&w \$62.50. Using a toy factory as background, traces the production of a jack-in-the-box from the initial idea through experimental design, production line, assembly line, marketing, and final retail sales. Int.

**Long Pull** mp MODERN 29min sd col free. Drama, color, and sound of a giant steel plant producing steel wire for thousands of jobs from tire chains to screws.

**Manufacturing Reinforced Plastics** mp ASSN 14min sd col free. The plastics

industry and the uses of fibreglass in automobiles, airplanes, by sports equipment manufacturers, and by style and fashion setters.

**Mr. Withers Stops the Clock** mp STERLING 30 min sd col free. Vital role airports play in the welfare and progress of the communities and people they serve.

**Natural Rubber: A Product of Nature Plus Science** fs VEC 31fr si b&w \$3.50. How scientists have developed a product of nature, with emphasis on bud-grafting of high-yielding trees. Int.

**New Horizons in Plastering** mp V1 20min sd col free. Methods of applying vermiculite plaster and its uses in small homes and skyscrapers.

**New SMPTE Test Film** mp SMPTE 3min sd b&w \$27.50. Measures registration, aperture size, resolution, shutter timing, centering of the image, steadiness of its own test image with respect to perforation, provides a "thousandths scale" for measuring film movement in double-exposure testing of printer steadiness.

**New SMPTE Magnetic Multi-Frequency Test Film** mp SMPTE sd b&w. Covers a range of frequencies from 50 through 7,000 cycles and provides a reference standard for measuring and adjusting the electrical characteristics of magnetic sound systems for motion pictures and television.

**Our Nation's Resources: Natural Gas** fs VEC 28fr si b&w \$3.50. Photographs and drawings show how natural gas was formed and trapped in underground vaults of sand and stone; gas fields in the U. S.; how gas fields are found, drilled; building of pipeline networks.

**Paper in the Making** mp MOD 24min sd col free. Entire process shown including unusual animation.

**People and Goods Travel** 6fs JAM si col \$30 or \$5.25 ea. Equipment, employees, and safety factors of the transportation industry shown in live photography. **Airplanes, Passenger**

**Train, Freight Train, Busses, Trucks, Boats and Ships.** Pri.

**Power Unlimited** mp AEC 13min sd b&w free. Development of nuclear power detailing the first generating of useful power with an experimental breeder reactor.

**Promise of the Trees** mp MOD 27min sd col free. Forests of the Northwest, logging operations, conservation methods, reducing of logs to chips and later to pulp, use of pulp in making rayon, cellophane, and paper.

**Road of Iron** mp NFB 42min sd b&w \$160. Story of the building of the railroad from Seven Islands, Quebec, over a 360 mile route of forest, river, and muskog to the iron-rich north country.

**Shaping of Things to Come** mp ROTHACKER 36min sd col free. Plastic molding process from basic phenolic, melamine, and urea through hand, semi-automatic, transfer and injection molding to the finished product.

**Skylines** mp MODERN 29min sd col free. Portrays the role of structural steel in the skylines of today — skyscrapers, bridges, and the new, low horizontal skylines of modern industry, shopping centers, and schools.

**Story of Citrus Fruits** mp COR 11min sd col \$100 b&w \$55. How seedlings are grown in nurseries, how trees are cared for in the groves, how fruits are harvested, and how they are processed, canned, and frozen at packing plants and canneries. Pri.

**This is Oil** 5mp SHELL ea 25min sd col free. A series of motion pictures telling the story of petroleum: **Prospecting for Petroleum, Birth of an Oil Field, Refining Oil for Energy, Oil—The Invisible Traveler, Story of Oil Marketing.**

**Three to Get Reedy** mp MOD 20min sd col free. Role of meat in the diet, latest nutritional findings, work of the meat industry.

**Torch Welding Aluminum** mp USBM 17 min sd b&w free. Steps necessary to a good torch weld; preparation of welding surfaces, manipulation of the torch, analysis of proper and improper welding procedures.

**Twins on the Ohio** mp MODERN 24min sd col free. Story of the construction of two huge power plants on the Ohio River to provide electricity for atomic energy plants.

**What Do You Know** mp DuP 8min sd col free. Development, properties, and uses of DuPont Sealer-Coater including its application on all types of wall surfaces.

**What Makes a Gasoline Good** mp DuP 17min sd col free. An animated presentation of gasoline processing from crude oil.

**When the Customer Says "Knock"** mp DuP 17min sd col free. Explains the causes of engine knock that are not related to gasoline quality.

**Wishes on Wheels** mp MOD 28min sd col free. Tour of a modern automobile plant showing assembly line operations.

**World that Nature Forgot** mp MOD 30 min sd col free. Development of new plastics.

## LANGUAGES

**Albigois** mp FRENCH 20min sd b&w free. Area of Albi in Languedoc on the Tarn River — its cathedral and Renaissance houses, women in native costumes, famous citizens, such as Toulouse-Lautrec, La Perouse, and Jean Jours. In French.

**Let's Try Choral Reading** mp YAF 10min  
sd b&w \$50. What choral reading is  
and the values to be gained from it.  
Int.

**Library Adventure** mp NEUBACHER 13  
min sd col \$115. Two children find the  
public library to be a friendly and in-  
teresting place. They learn how to find  
fiction and non-fiction books, to use  
the card catalogue and reference sec-  
tion, and how to care for books and  
obtain a library card. Int.

**Library Science Flannelboard Materials:**  
**LSI Catalog Words and Numbers**  
**Pocket** \$5 TECHNI—Visual for build-  
ing title page, bibliographical entry,  
author card, contents and index. 44  
words and 30 numbers. Capitals in  
contrasting color.

**Talking Sense: Irving Lee—Why Do  
People Misunderstand Each Other** mp  
INDIANA 30min sd b&w \$100. Sig-  
nificant characteristics of words: their  
technical or nontechnical character,  
regional differences in usage, their  
change in meaning through time, way  
new words are continually being  
coined, how different circumstances  
call for differences in tone or "status"  
in choice of wording.

**Writing and Revising** 4fs FH si col \$15.  
Sequels to "Writing the Paragraph"  
by Reid Irving. EI-SrH.

**Your School Publications** 6fs JAM si col  
\$5.95 \$32.70. Basic information for  
publishing school newspapers and  
yearbooks. **Organizing a Staff, Find-  
ing Feature Material, Covering the  
News, Editing the Copy, Planning the  
Layout, Yearbook Planning and Pro-  
duction.**

## LITERATURE & DRAMA

**American Literature: The Westward  
Movement** mp CORONET 11min sd col  
\$100 b&w \$55. How the people and  
themes of the westward movement  
have served as a source of material for  
writers from the early 19th century to  
the present day. Scenes characteristic  
of the adventurous spirit of the move-  
ment are combined with quotations  
from the works of poets, historians,  
and novelists. SH.

**Animated Silhouette Films** 9mp CON-  
TEMPORARY ea 10 min sd b&w \$50  
r\$5. **Cinderella, Puss in Boots, Thumb-  
elina, Gallant Little Taylor, Hansel  
and Gretel, Sleeping Beauty, Papagena**  
(based on the Bird Catcher's theme  
from Mozart's Magic Flute), **Carmen,**  
**Galathea** (the old Pygmalion story of  
a statue coming to life in classical  
Athens).

**Basic Stage Lighting Equipment** fs CME  
40fr si col \$5.50. Captioned exterior  
and interiors, diagrams of optical sys-  
tems, examples of area throw of vari-  
ous kinds of lighting equipment; other  
devices, including lenses, dimmers, etc.

**Block Cat** mp USC 15min sd col \$120  
r\$5. Attempt to retain the unique  
qualities of Poe's writing — striving  
for a single emotional effect, the  
elimination of extraneous material,  
and the gradual and persistent in-  
tensification of mood. Narration is a  
word-for-word translation to the film.  
Simplified methods of set design and  
staging are employed to heighten the  
effect.

**Charles Dickens Christmas** mp EBF 22  
min sd col \$200 b&w \$100. Adapted  
from "The Pickwick Papers," drama-  
tizes one of the best-known incidents  
in English Literature — the Christ-  
mas visit of Mr. Pickwick and his friends  
to Dingley Dell Farm. SrH.

**Dr. Faust** mp Hoff 15min sd b&w. Pup-  
pet story of the Shakespearean play.

**Development of the Physical Theatre** fs  
CME 55fr si b&w \$3.50. Pictures the  
development of the theatre from the  
fifth century, B.C., through close-ups  
of authentic scale models. Manual.

**English Literature: The Romantic Period**  
mp CORONET 14min sd col \$125 b&w  
\$68.75. Through the eyes of a young  
journalist of 1828, we see a period of  
literary, as well as political, revolution.  
Dramatized selections from Burns,  
Wordsworth, Coleridge, Blake, Byron,  
Shelley, Keats, and Scott reveal the  
individuality and independence of  
spirit of England's Romantic writers.  
SH.

**English Literature: The Victorian Period**  
mp CORONET 14min sd col \$125 b&w  
\$68.75. To the bookshop of James  
Bain, 19th century shopkeeper, come  
customers interested in the writings of  
Macaulay, Carlyle, Darwin, Huxley,  
Newman, Dickens, the Bronte sisters,  
Hardy, Arnold, Ruskin, and Carroll.  
Through these prominent figures of  
literature, the world of conflicting  
ideas of this period is depicted. SH.

**Everyman** mp GENERAL FILMS 40min  
sd col apply r\$25. The famous play in  
a first English version. Musical score  
by David Epstein. Directed by Richard  
Hilliard.

**Gift of the Magi** mp TFC 20min sd b&w  
lease. Excerpt from "O. Henry's Full  
House," story of the impoverished  
young husband who sells his prized  
watch, a family heirloom, to buy a set  
of beautiful combs as a Christmas  
present for his wife, only to learn that  
she had cut off her hair and sold it to  
buy a platinum fob for his watch. The  
sacrifice of their most prized posses-  
sions is forgotten in the joy of their  
love for one another.

**Golden Classics Series** 4fs YAF si col.  
Based on the text and original full-  
color illustrations of Siman and Schus-  
ter's Gold Stamp Classics of the same  
titles, each strip presents the high-  
lights of the story's plot and its charac-  
ters in a manner designed to stimulate  
interest in reading the stories. **Gulliver's  
Travels, King Arthur, Moby Dick, Rob-  
inson Crusoe.** Int.

**Patient is a Person** mp AMA 20min sd col \$50 b&w \$10. Explores the fearful attitudes which many patients exhibit on entering a hospital and suggests techniques of non-medical care which may help to allay these fears and contribute to the patient's rapid recovery.

**Pharmacy Program of Study** fs AACP 60fr si col \$5. Educational training for a career in pharmacy.

**Secrets of the Heart** mp AHA 29min sd bGw \$50 r\$5. The isolated beating heart of an experimental animal, the jagged track of light traced by a nerve fiber on a cathode ray tube, steady march of a man's feet on a moving belt, and other sounds and sights of modern research into the heart and its operation.

**Stress** mp MH 11min sd bGw \$60. Based on Dr. Hans Selye's theory that stress is a general alarm reaction through the pituitary and adrenal glands which is set off by an attack on the body through disease, injury, or emotional tension. He shows some of the experiments which led him to his discovery and discusses the progress being made in combating disease with hormones.

**Surgeon of Pain: Prof. Rene Leriche** mp FACSEA 20min sd bGw by prescription. Pioneer in the field of surgery in the sympathetic nervous system.

**Time for Tomorrow** mp AACP 20min sd col \$125 free. Manner in which a pharmacy student spends his time—in laboratory, classroom, and after school hours.

**Unconditional Surrender** mp NFIP 14min sd bGw free. How Salk vaccine is produced in millions of cubic centimeters to protect youngsters and their families.

**Within Your Hands** mp APTA 18min sd bGw free. Opportunities in one of medicine's younger professions, Physical Therapy.

**Your Doctor** mp MOD 15min sd bGw free. Steady progress of medical care and health standards; study and work of doctors; the continuing education on the job of all physicians.

## MENTAL HEALTH & PSYCHOLOGY

**Case of Multiple Personality** mp PCR 25 min. Filmed record of a striking case of multiple personality in which the viewer is introduced to the behaviors of three distinct and contrasting personalities residing in the same individual, separately elicited by direction of the therapist.

**Eye of the Beholder** mp SOV 25 min sd bGw \$100. Demonstrates in dramatic fashion that no two people perceive the same situation in the same way. Artist Michael Gerard's Mother, a taxi driver, a waiter, a scrubwoman, and the landlord of the building in which he works all have their interpretations of Michael's actions as he seeks and finds a model worthy to pose for his attempt to paint a 20th Century Madonna. After these interpretations have been depicted, Michael tells his own story. Originally telecast on the General Electric Theatre.

**Films for Psychology** 4m McG-H sd bGw.  
**Conflict** (18min \$110) shown in its four basic types as demonstrated in typical problems of high school or college students and relationships to studies with rats under controlled conditions; **Learning: Part I, Acquisition, Extinction, and Reconditioning** (8min \$50) shows parallels between laboratory pigeon behavior and that of children; **Learning: Part II, Stimulus Discrimination and Response Differentiation** (10min \$60); **Learning: Part III, Schedules of Reinforcement** (16min \$95).

**Finger Painting as a Projective Technique** mp PCR 21min sd col \$170 r\$6.50. Does not attempt to teach interpretation of finger paintings but shows way in which patient should be shown how to finger paint, techniques for creating various simple effects, equipment and materials. Theory of finger painting as a projective technique discussed at various points in the film.

**Help Before Headlines** mp PCR 11min sd bGw \$45 r\$2. Brief case study of a rejected seven-year-old boy shows value of community-supported psychological counseling services for children and parents.

**Introduction to Work Sampling** mp UCLA 19min sd col \$176 bGw \$80 r\$3.50-\$6. By means of a large panel containing 480 wood blocks representing the 480 minutes of a work day, the film explains and demonstrates how a random sample can be used to predict the whole.

**Man is a Universe** mp NFB 12min sd bGw \$40. Progress made at the Montreal Neurological Institute in unraveling the mysteries of the human brain and nervous system, showing highly complex electronic equipment and ending up with a brain operation on an epileptic.

**Margin of Safety: Psychological Distance Under Danger** mp PCR 16min si bGw \$38.50 r\$3. Reports an experiment showing that subjects (college students) allow greater margins of safety under dangerous conditions and that they change to a slower pace than is characteristic under conditions of no danger.

**Psychotherapy Begins: The Case of Mr. Lin & Psychotherapy in Process: The Case of Miss Mun** 2mp PCR ea 56min sd bGw ea \$175 ea r\$8. Illustrates technique of non-directive therapy, the first film being a record of a first interview; the second a record of the 17th interview which had been preceded by 70 interviews with another counselor. Coll.

**Toward Emotional Maturity** mp McG-H 11min sd bGw \$60. Causes of unreasoning emotion, how emotion sweeps away common sense, how the adolescent can be prepared to understand and control his emotions. JrH-SrH.

**We, the Mentally Ill** mp PCR 30min sd bGw r\$1.50. Brief history of treatment methods in mental hospitals, reenacted by patients in a mental institution. Subsequent scenes contrast current conditions of overcrowded wards in representative institutions with improved conditions and modern methods of treatment.

## MUSIC: GENERAL

**Brahms and His Music** mp CORONET 14min sd col \$125 bGw \$68.75. The classical music of Johannes Brahms is used as a framework within which are presented those who influenced the composer, the places he lived, and important ideas of his life. JH.

**Cormina Burono** rec ANGEL 1-12" LP \$3.48. Wandering monks and scholars and vagabond poets wrote the medieval poems on which this modern work by Carl Orff is based. Prologue and Epilogue lament the fate of man, victim of the Wheel of Fortune at whose turn "one is deposed, another lifted high." The three main parts celebrate

the joys and rites of spring, drink, and love. Conducted by Wolfgang Sawallisch with the Cologne Radio Symphony, the Chorus of West German Radio, and soloists Agnes Giebel, Marcel Cordes, Paul Kuen.

**Conducting Good Music** mp EBF 13min sd col \$125 bGw \$62.50. Shown is the conductor's intense communication of musical signals to the orchestra, as the narrator points out significant highlights. The signs which the composer writes into the score as a guide for the conductor are clearly explained. Portions of Brahms's Second Symphony, Haydn's Military Symphony, Tschai-kowsky's Sixth, and Dvorak's New World are played. Three conductors interpret the opening passages of Beethoven's Fifth.

**Handel's Oratorio: "Israel in Egypt"** rec ANGEL 2-12" LP. Conducted by Sir Malcolm Sargent with the Liverpool Philharmonic and soloists Elsie Morrison, Monica Sinclair, Richard Lewis, and the Huddersfield Choral Society.

**Mozart** 15sl MUSICAMERA col \$7.50. Life, times, and works including place of his birth in Solzburg, childhood and adult likenesses by contemporary artists, likenesses of other members of his family, reproduction of manuscript pages.

**Schuman Story** mp HOFF 30min sd bGw. Drama with music—a biography of Robert and Clara Schuman, composers and pianists.

**Songs from Brazil** rec WESTMINSTER 1-12" LP. Clara Petrogli, songstress-guitarist, in a repertoire of hauntingly beautiful Brazilian folk songs.

**Today in Music and Dance** mp EFLA 28 min sd bGw \$50. Interview sequences taken from the "Today" TV program with Dave Garroway. Interviews and demonstrations include the Fine Arts Quartette, Antonio—Spanish flamenco dance, Paul Zukofsky and Abbott Lee Ruskin, young performers—violinist and pianist—from the Juillard School, Dennis Brain—French horn player, Katherine Dunham—dancer-anthropologist.

**Yonvolla** mp BRAN 10min sd col \$100 r\$5. Dramatizes the rite of the snake-god of the Dahoman tribe in the West Indies.

**Charts of Human Histology** \$15.75 or 75c each. GBS. Drawings are based on microscope slides of human histology; a few are based on other mammalian tissue. Each chart measures 17"x22" and is printed in black-and-white with complete labels. Topics covered include: epithelial tissues (2 charts), connective tissues (2), developing bone, bone, circulatory system, blood types, digestive system (4), respiratory system, urogenital system, muscular tissues (2), nervous tissues (4), reproductive system: male, reproductive system: female.

**Creatures of the Desert** mp YAF 10min sd bGw \$50. Adaptations that enable animals to survive there. Int.

**Dog Brain Stem Microscope Slides.** GB Set of 25 \$65. The angle of cut is directly transverse in the pons region, sections at other levels being parallel

## How Many Classrooms Will One Set of PAKFOLDS Darken?

**PORTABLE PAKFOLDS  
SERVE BEST . . .  
COST LESS!**

Portable PAKFOLDS make every room a visual education room! One set of PAKFOLDS serves throughout the building. PAKFOLDS attach instantly . . . no ladders to climb; no screws or complicated mechanisms. Available for large or small windows, in any length or width.

**WORLD WIDE PICTURES**

P.O. Box 1055 Sherman Oaks, Calif.

to this plane. Fixation and staining  
(Weigert-Pal) are the same as used  
on the human brain.

**Earthworms** mp DOWLING 11min sd col  
\$100. Earthworms seen at the instant  
of birth from a cocoon, as they develop  
tube-shaped body, eating their way  
through the earth, digesting plant  
food, and forming tunnels that aerate  
and enrich the soil and carry water  
to plant root. Int.

**Eyes: Their Structure and Care** mp COR  
11min sd col \$100 b&w \$55. A boy's  
headaches, falling grades, and poor  
distance judgment lead to a discus-  
sion of the common symptoms of eye  
trouble; animation shows structure and  
functioning of the eye; how common  
defects are corrected; professional  
workers dealing with eyes and glasses.  
JrH.

**Fish Figurines** \$2.50 for 8. STURGIS.  
Dane in silver metallic plastic, each  
2-3 inches long: sea horse, marlin,  
rainbow trout, sail fish, shark, sword  
fish, tuna, and porpoise.

**Frogs and Toads** mp YAF 11min sd b&w  
\$50. Life cycles and life processes in-  
cluding some unusual scenes of adap-  
tations for food-getting, self-protec-  
tion, identification, calls, etc. JrH.

**Goldfinch Family** mp EBF 8min sd col  
\$75. With many vivid closeups, pro-  
vides a complete view of the family  
life of goldfinches — their eating hab-  
its, way of building a nest, methods  
of feeding and caring for the young.  
Pri-El.

**How Animals Help Us** mp YAF 10min sd  
b&w \$50. Visualizes and explains the  
many ways in which man benefits from  
the products and services derived from  
animals. Int.

**How Birds Help Us** mp CORONET 11min  
sd col \$100 b&w \$55. Jack believes  
all birds are pests like the little crows  
in his garden. Looking around, how-  
ever, he observes that birds help us in  
many ways such as providing us with  
food, destroying harmful insects and  
rodents, eating weed seeds, and giv-  
ing us pleasure with their bright colors  
and happy songs. Pri.

**How to Identify Common Trees** fs VEC  
31 fr si b&w \$3.50. Clues in leaves,  
fruit, and bark. Treats 31 common  
trees and shows a tree map to be  
copied for use on field trips. Int.

**How Insects Help Us** mp CORONET 11  
min sd col \$100 b&w \$55. Working in  
his mother's flower garden, Bill notices  
only harmful insects, but when he and  
Jack go fishing he becomes aware of  
many useful insects. These insects de-  
stroy harmful ones, they are food for  
fish and birds, bees carry pollen and  
make honey, silk worms make their  
contribution, and others are beautiful  
and fascinating to observe. Pri.

**How Plants Help Us** mp YAF 11min sd  
b&w \$50. Ways in which plants pro-  
vide man with products and services,  
directly and indirectly — foods, medi-  
cines, oxygen, fuels, etc. Int.

**How Plants Reproduce** mp YAF 11min sd  
b&w \$50. Live action and animation  
used to vision and explain the main  
parts of a plant and its flower, how a  
typical flower is pollinated and fer-  
tilized, and how the plant then grows  
new seeds to keep the life cycle un-  
broken.

**How Trees Help Us** mp CORONET 11min  
sd col \$100 b&w \$55. Walking  
through the woods with his father,

Wally sees different kinds of trees  
and begins to learn of the many ways  
trees help us by supplying lumber, food,  
and material for things we make. In  
the story of the mighty old oak, Wally  
realizes how very long it takes a tree  
to grow and how it is valuable through-  
out its life. Pri.

**Human Body: Circulatory System** mp  
COR 14min sd col \$125 b&w \$68.75.  
Circulatory system analyzed by means  
of animation, cinefluorography, draw-  
ings, and close-ups of vital live organs.  
Treats heart, lungs, kidneys. Signifi-  
cant terms overprinted. JrH.

**Human Heredity** mp BROWN 18min sd  
col \$170. Uses live-action photog-  
raphy and animation with touches of  
humor to present basic facts and  
principles concerning human heredity  
and the influence of culture and en-  
vironment on behavior and attitudes.

**Human Pathology** 58sl GBS. 90c each  
in cardboard; \$1.15 in glass. Mostly  
law to medium magnifications are  
used. All are human material, and all  
are stained with haematoxylin and  
eosin. In Kodachrome.

**Insect Life Cycle: The Periodical Cicada**  
mp EBF 11min sd b&w \$50. The life  
cycle of the periodical cicada, one of  
the most unusual insects found in  
North America, is recorded and an-  
alyzed in this subject which includes a  
dramatic study of the cicada's emer-  
gence and transformation. JH.

**Introducing Biology** fs LONG 26fr si col.  
Cartoons explain the meaning of the  
word "biology." Color pictures illus-  
trate living and non-living things. In-  
cludes a discussion of the use of the  
microscope and other equipment.

**Introducing Cells** fs LONG 30fr si col.  
Explanation of cell theory and its  
proponents; use of microscope; types  
of cells.

**Living Things: Animals** fs VEC 20fr si  
b&w \$3.50. Animals need food, water,  
sunshine; same animals supply food  
and clothing for man; others work for  
us; similarities to humans. Pri.

**Monaboni's Birds** 32sl MODERN ENTER-  
PRISES col \$10.50. Collection of bird  
portraits showing birds in flight. Done  
with attention to detail and realistic  
settings. Pamphlet fully describes each  
bird, sex colorings, habitat, and other  
pertinent information.

**Mueller-Ward Model of the Rhesus  
Monkey Brain.** WARD'S \$35. Also  
available unpainted and unmounted for  
\$16. Scale magnification is 2.25x  
which makes the model 6.25 by 4.75  
by 4 inches, not including base and  
standard. An interesting example of a  
primate at an intermediate level of  
evolution between man and lower ani-  
mals.

**Natural Enemies of Insect Pests** mp UC  
27min sd col \$195 r\$6. In microscopic  
views shows the use of beneficial in-  
sects in controlling harmful species.

**PAT DOWLING PICTURES**

Write for Brochure  
1056 S. Robertson Blvd.  
Los Angeles 35, Calif.

**Perils of the Wild** mp UWF 10min sd b&w \$22.95. The instinct for survival among animals, large and small, is seen as a forest fire sweeps toward them.

**Pet Shop** mp ALMANAC 10min sd b&w \$50. A German shepherd dog acts as general caretaker for monkeys, owls, chickens, turtles, porcupines, and kittens. El.

**Plants and Animals Series** 5fs YAF si col. **Plants and the Things We Use, Plants Help Us, Animals and the Things We Use, Animals Help Us, Man Improves Plants and Animals.** Int.

**Prehistoric Animals of the Tar Pits: Story of Rancho La Brea** mp FA 14min sd col \$125 b&w \$62.50. Introduces the tar pits at Rancho La Brea in the city of Los Angeles and the skeletons of some of the animals taken from them. Illustrates the methods used by paleontologists in identifying and assembling fossil materials. Animals are pictured in miniature. Manner in which they were trapped is indicated. Int.

**Prehistoric Figure Sets.** LIBRARY Sets of 11 and 3 figures each beautifully sculptured in plastic. No. 0885(\$3.95) includes the Pteranodon, Dimetrodon, Plateosaurus, Cynognathus, Spheoncodon, Triceratops, Ankylosaurus, Hadrosaurus, Stegosaurus, Trachodon, and Allosaurus. No. 0886(\$11.50) includes a Brontosaurus, Kronosaurus, and Tyrannosaurus.

**Protecting Fresh Water Game Fish** fs VEC 30fr si b&w \$3.50. Proper habitat for game fish and conservation measures needed to protect habitat; operation of fish hatcheries. JrH.

**Putting Animals in Groups** mp IFB 13min sd col \$125. Idea of classifying by structures; distinctive characteristics of mammals, birds, reptiles, amphibians, fishes, and insects.

**Scaled Zoological Miniatures.** LIBRARY Set of 69 hand colored ranging in size up to 5"x11" for the African Elephant. Prices range from 65c to \$4.50.

**Seed Dispersal: 2nd Edition** mp EBF sd col \$100 b&w \$50. Illustrates the dispersal of seeds by wind, water, animals, man, and mechanical means. Int.

**Spider Engineers** mp MOODY 16min sd col \$120 b&w \$60. Carefully pictured construction is performed by the orb weaver, bolas spider, diving spider, and trapdoor spider. SrH.

**Spiders: 2nd Edition** mp EBF 11min sd col \$100 b&w \$50. Characteristics of spiders, spinning a web, kinds of spiders: marble, wolf, trap-door, diving. El.

**Spinal Column: Structure and Function in Man** mp EBF 11min sd b&w \$50. Structure described in detail through X-ray photography and animation; function of spinal column in relation to other bones indicated; study of posture. SrH.

**Swamp** mp MINNESOTA 9min sd col \$85. Problems of wildlife conservation in a small marsh, Mother Loke, within the city limits of Minneapolis being reclaimed for real estate development. Some 18 varieties of birds and animals are seen, typical of Minnesota marsh wildlife.

**Teeth: Their Structure and Care** mp COR 11min sd col \$100 b&w \$55. Dave neglects regular dental care for two years until a recurring pain sends him to the dentist. Animation shows function and structure of different teeth; way in which decay spreads. JrH.

**Termites** mp ALMANAC 23min sd b&w \$125. Life cycle and how science copes with the problems created by these social insects; the good(!) termites do. SrH.

**Toads** mp DOWLING 10min sd col \$100. How the toad, on example of the few remaining descendants of prehistoric amphibians, has been able to survive; cycle of life; means of protection and ability to live in desert areas; how the toad hibernates; procurement of food. Int.

**Tweedy Transparencies for Vu-Graph Projectors.** 56 are available, at \$1.85 each, in three sizes: 5"x5", 7"x7", and 10"x10". The Tweedy catalog includes diagrams of protozoans, earthworms, starfish, grasshoppers, plant structure, moss life; skeletons, muscular system, digestive system, heart; general scientific group; athletic series. Pockage prices include a steel case. Transparencies are mounted and grommeted.

**Who's Who in Our Wildlife Zoo?** fs VEC '55 31fr si b&w \$3.50. Photographs of 26 wild animals native to the United States. Explains characteristics of the animals, how they live, what they eat, and where they are found.

**Wild Animal Families** mp FA 10min sd col \$100 b&w \$50. Presents seven animal families shown in their natural habitat with family relationships stressed: bison, pronghorn antelope, prairie dog, bear, porcupine, elk, Canadian geese. Pri.

**Wildflowers of the West** mp RICHFIELD 28min sd col free. State flowers of six western states; other wild flowers; role of animal life in assisting pollination of wild flowers.

**Wild Swans** mp ALMANAC 10min sd b&w \$50. Family group study as mother hatches her eggs and father stands guard against marauders; young swans break out of shells; natural habitat shown. Int.

**Valvox** sl GBS ea \$1.40. Microscope slides show the various stages of this specialized colonial form including the daughter colonies, ontheridio, oogonio, and zygotes.

## SCIENCE: GENERAL

**Dams** mp DOWLING 14min sd col \$125. Usefulness of dams to create electric power; store water for domestic, industrial, and agricultural use; improve inland waterways; repel sea water intrusion; and provide recreational areas. Scenes of dam construction. Operation of Shasta Dam and the Central Valley Project in California. Int.

**Earth and Its Neighbors in Space** 6fs EBF si col \$36 ea \$6. Basic concepts in astronomy shown in authentic color drawings with captions. **Astronomy Through the Ages, Our Earth, Moon, Sun, Solar System, Stars.** El.

**Elementary Science Set No. 5** fs YAF si col \$30. **The Aquarium, How Animals Are Grouped, How Airplanes Fly, How a Plant Grows, How a Plant Makes Food, Trip to the Weather Station.** Int.

**Exploring the Night Sky** mp EBF 10min sd b&w \$50. Designed to motivate interest in understanding the phenomena in the night sky. Shows the telescope in operation, points out essentials of how the solar system works, mentions distances in the heavens, by animation identifies constellations. El.

**Four Whys in Elementary Science** 4fs FH si col \$20. Launches a new series on science for the lower elementary grades.

**General Science I** 6fs DUK sd b&w \$30. **Energy of Muscles, Energy of Air and Water, Heat: Conduction and Convection, Heat: Radiation, Making Thermometers, Reading Thermometers.**

**General Science II** 6fs DUK sd b&w \$30. Contains two filmstrips each on Bridges, Clocks, and Windmills. El-JrH.

**How Water Helps Us** mp CORONET 11 min sd col \$100 b&w \$55. When the water supply to his house is temporarily cut off, Dickie begins to understand how important water is for drinking, washing, cooking, and other uses in the home. He realizes, also, that we use it for putting out fires, as a source of food, for transporting people and materials, for growing crops, and for recreation. Pri.

FOR TEACHING & SELLING

USE SELECTROSLIDE!

Modern teaching methods, like modern selling methods, call for reliable working tools and SELECTROSLIDE gives trouble-free operation; brightest picture on the screen, and scores of other benefits.

From the JUNIOR to the STANDARD to the DUAL-SELECTROSLIDE nothing beats them, built with more than 32 years of experience, to out-perform and out-last all others.

SELECTROSLIDE is the "diamond" of fully automatic projectors . . . nothing finer . . . nothing more enduring . . . and there is a SELECTROSLIDE to fit your projection needs. Contact your local Audio-Visual Dealer for demonstration or rental of SELECTROSLIDE, or consult us.

DUAL  
SELECTROSLIDE  
for 96 slides

Illustrated literature available — no cost or obligation.

**Spindler & Sauppe** ESTABLISHED 1924

2201 Beverly Blvd., Los Angeles 57, Calif., Phone: DUnkirk 9-1288

# AUDIO-VISUAL EQUIPMENT MANUAL

by  
**James D. Finn**

**How Weather Helps Us** mp CORONET 11min sd col \$100 b&w \$55. How rainy, snowy, windy, and sunny kinds of weather are helpful to people, to plants, and to animals. Types of clouds indicate changes in weather. Pri.

**Junior High Science Series** 39mp McG-H 13min ea sd b&w \$55 ea. **Falling Bodies, Chemistry of Air, Air in Motion, Friction, Energy, Reflection, Magnetism, Inertia of Rest, Gravity and Center of Gravity, Spinning Objects, Force, Automobiles, Inertia of Motion, Pendulum, Wheel and Axle and Pulley, Action and Reaction, Centrifugal Force, Heat Conduction, Archimedes' Principle, Lever, Inclined Plane-Wedge-Screw, Streamlining, Pascal's Law, Refraction, Optical Illusions, Heat Convection and Radiation, Fire, Properties of Liquids, Surface Tension, Ice, States of Matter, Density, Refrigeration, Sound, Properties of Gases, Air Pressure, Electric Circuits, Better Electricity, Static Electricity.**

**Lands and Waters of Our Earth** mp CORONET 11min sd col \$100 b&w \$55. Jimmy becomes aware of the many kinds of land and water forms on the surface of our earth during a family picnic at a scenic spot. He is able to observe hills, mountains, valleys, rivers, and other geographic features; a picture book helps him understand the relationships among them. Pri.

**Ocean Tides: Bay of Fundy** mp EBF 14min sd col \$125 b&w \$62.50. Makes effective use of time-lapse photography and animation to visualize the ebb and flow of ocean tides and their effect on life on the sea-coast. Int.

**Our Living Soil** mp GOLDEN 25min sd col \$200. Conservation of soil including water cycles and life cycles of the soil. Shows farms from Pennsylvania to California practicing modern methods of soil conservation.

**Our World of Science** mp EBF 10min sd col \$100 b&w \$50. Planned as a first film in science, in simple terms it introduces the concept of an orderly

universe and describes a working procedure for problem solving in science. Pri.

**Revised Almonoc Science Films** 10mp ALMANAC 10min sd b&w \$50. The 72 Almonoc science films, which originally appeared on TV as John Kieron's Kaleidoscope, are in process of being re-edited for specific classroom use. The ten newly re-edited and re-narrated films now available are: **Earth's Skin, Weather, Heart, Earth and the Seasons** (formerly Sun, Earth and Moon), **Mr. Stickleback, the Perfect Parent, Sensitivity of Plants, Animal Behavior** (formerly, Training of the Young), **Tides, Earthquakes, Miracle of Life**. Old prints may be traded in for a credit of \$30 each.

**Science in Your Future** GE Free. Comic book on the contributions of scientific research to modern living.

**Snow Flakes** mp MOODY 7min sd col \$60 b&w \$30. Snow as a source of recreation, water for food production, and priceless microscopic beauty. Pri.

**Understanding Our Universe** mp CORONET 11 min sd col \$100 b&w \$55. How man has learned about the universe from early times; growing knowledge of it; solar system. JH.

**Upstream Where Floods Begin** mp UW 12min sd b&w \$21.51. Filmograph dealing with the watershed protection work of the Soil Conservation Service.

**Water—Wealth or Worry for America** mp MOD 24min sd col free. How water departments of progressive cities are planning ahead; need for conservation.

**Weather Station** mp YAF 10min sd b&w \$50. Functions of the weather station, its workers, value of weather forecasts, and how they are made. Int.

**Whys of Elementary Science I** 4fs FH 25-30 fr ea si col \$20 ea \$6. Two small children find the answers to four simple science questions. **Why Does It Rain? Why Do We Have Wind? Why Do We Have Warm and Cold Days? Why do We Have Day and Night?** Pri.

**Wonders of the Sky** 9fs EYE si col \$25 \$4. The field of astronomy is covered

from primitive to modern times touching upon important problems and techniques as they were developed. **Man Studies the Sky, Our Sizzling Sun, Our Silvery Moon, Milky Way, Sky Patterns, Life on Our Planets, Lows of the Sky, Earth in Space, Time-Space-Energy.** El.

**Working Water** mp DOWLING 14min sd col \$125. How water is stored and brought to dry lands, formerly unproductive; and how used, through scientific irrigation methods, to grow bountiful crops. Stresses necessary balance of soil, sunshine, and water. Increasing importance of irrigation in many parts of the nation. Int.

## SCIENCE: PHYSICS & CHEMISTRY

**Adventures in Electronics** GE free. Comic book on the use of electronics in modern living.

**Atomic Achievement** mp BIS 20min sd col \$150 r\$6. Story of the harnessing of nuclear energy for peaceful purposes in Britain. Illustrates its potentialities.

**Atomic Alchemist** mp AEC 13min sd b&w free. New fields for chemistry in the atomic age.

**Atoms in Three Dimensions** CHICAGO. Model set permits study of space relationships in various molecules. Built to exact dimensions for proper valences and valence angles. Permanent, brilliant colors are impregnated in the plastic designate carbon, hydrogen, nitrogen, phosphorus, sulfur, chlorine, bromine, iodine, fluorine, oxygen, silicon. Holes are precisely drilled to permit joining of the spheres by means of pegs. Set consists of 69 balls and 59 pegs. Larger sets available.

**Atoms for Peace Series** 3mp UW 21min ea sd b&w \$45.36, \$50.78, \$50.67. **Introducing the Atom** supplies background information and suggests possible uses; **Medicine** shows uses in medical research and diagnosis; **Agriculture, Industry, and Power** describes effects of radio-active materials in agricultural and industrial production.

**Atom Smashers** mp AEC 13min sd b&w free. Principles of particle accelerators; shows the cyclotron, synchrotron, and cosmotron.

**Atomic Furnaces** mp AEC 13min sd b&w free. Principles of the atomic reactors at Brookhaven, Oak Ridge, and Los Alamos.

**Atomic Physics** 5mp AEC 90min sd b&w free. Technical film on the history and development of atomic energy.

**Challenge of Outer Space** mp USA, USAF, USN 61min sd b&w free. Illustrated lecture by Prof. Wernher von Braun, Director, Guided Missiles Division of Redstone Arsenal, on the problems of space travel and the technical problems involved in the establishment of satellites. Problems of communication with satellites, development of rockets, military operations from a satellite are discussed.

New Films on nutrition and agriculture from a specialized producer . . .

## OUR LIVING SOIL THE EVERCHANGING YOU

Desert Rivers and Date Palms and many others. Write for Catalogue.

**GOLDEN KEY PRODUCTIONS INC.**  
1921 Hillhurst Ave.  
Hollywood 27, Calif.

**Current Flow, What It Is** mp UW 4min sd b&w \$7.18. Electrons move in chain reactions due to repulsion; all electrons in wire move when one moves; amount of current depends on number of electrons moving past a point.

**Demonstrating with Light** mp MOODY 12min sd col \$90 b&w \$45. Laboratory demonstrations utilizing photocell, facsimile tubes, and specially designed equipment to depict the wonders of light. JrH-SrH.

**High School Physics Series** 162mp EBF 30min ea set in col \$25,000 b&w \$13,000. Featuring filmed TV lecture demonstrations by Prof. Harvey White, the new series is currently being completed for three kinds of applications: (1) to provide a physics course on film for schools unable to secure qualified physics teachers, (2) to provide lecture demonstrations to assist teachers with limited background in physics, and (3) to provide excellent illustrative material and demonstrations to supplement the teaching of qualified physics teachers. The low price of the series is made possible by a grant from the Ford Foundation. Only complete sets of films will be made available. SH.

**History of the Atomic Concept I & II** 2fs VISUAL 45 & 40fr ea si b&w \$5 ea \$3. Part I includes early ideas from Early Greeks to 20th century; Part II begins with contribution made to atomic concepts since the turn of the century.

**How Magnets Produce Electricity** mp UW 4min sd b&w \$8.38. Shows the use of a magnetic field as it affects a single atom, a group of atoms as in a wire, and a wire in a closed circuit with a meter.

**Miracle Materials** mp ALMANAC 23min sd b&w \$125. Relation between synthetic resins, plastics, and fibres; chemical polymerization to create synthetic rubber demonstrated; shapes and colors possible in thermoplastics. SH.

**Nature of Color: 2nd Edition** mp CORONET 11min sd col \$100. Clarifies and demonstrates Newton's explanation of the rainbow, principles of color reflection and absorption, mixing of colors by addition and subtraction, application of color principles to painting, printing, and photography. Shows principles which make color films possible. SH.

**Oxygen** mp ALMANAC 23min sd b&w \$125. Properties and uses; needs of divers and fliers for oxygen; its life-saving characteristics. JH.

**Solar Energy** mp ALMANAC 23min sd b&w \$125. Industrial potential of solar energy in the world of tomorrow demonstrated by scientists in the Bell Telephone Laboratory where a solar battery is explained. SH.

**Techniques of Organic Chemistry** 4mp YAF. Script and demonstrations by Professor Louis F. Fieser, Harvard. Part I (11min sd col \$100 b&w \$50) shows equipment, fractional distillation, melting point determination, Rast determination of molecular weight; Part II (20min sd col \$200 b&w \$100) details equipment, solubility tests, procedure for crystallization, clarification, cholesterol from gallstones, collection of a precipitate, super-saturation; Part III (12min sd col \$100 b&w \$50) shows extraction, countercurrent distribution, elution chromatography, Part IV (19min sd col \$200 b&w \$100) shows preparation of Martius Yellow.

**What Causes Current Flow** mp UW 3min sd b&w \$7.18. Shows an outside force converted into electrical force of attraction; how forces of attraction and

repulsion contribute to EMF.  
**What Controls Current Flow; Resistance** mp UW 4min sd b&w \$8.38. Symbol for resistance to current flow, atomic basis for resistance in materials, effect of the use of a resistor in a circuit.

**Work Energy and Power** mp ALMANAC 23min sd b&w \$125. Potential and kinetic energy; atomic energy; other physical facts and principles. SH.

**SOCIAL STUDIES: ECONOMICS**

**America's Distribution of Wealth** mp NEP 13min sd b&w \$60. Demonstration of how the income of Americans is distributed among the various population groups.

**A Look at Capitalism** mp NEP 13min sd b&w \$60. Shows that capitalism is based on private ownership of property, the profit motive, and the free market.

**Pillars of American Strength** fs TIMES 57fr si b&w \$2.50. Concepts of individual freedom; the amalgam, character, and drive of Americans; blessings of abundance and geography, currents of culture; current problems of foreign policy, integration, and surpluses.

**People Who Work at Night** mp FA 10 min sd b&w. Varied activities at night in the city and their importance to the community and to the health and well-being of all. Pri-EI.

**Responsibility of American Citizenship** mp NEP 13min sd b&w \$60. Discusses the need to understand: the American way of life, Communism, Socialism, propaganda techniques of both groups, public education, government, spiritual growth, need for getting others to understand the obligations of citizenship.

**Security and Freedom** mp NEP 13min sd b&w \$60. A class discusses factors in genuine security—factors which came from within the person or over which he has control. Also discusses factors destructive to security.

**Your Federal Government** 6fs YAF si col \$30. Federal Government, Legislative Branch, Judicial Branch, Executive Branch, How a Bill Becomes a Law, Our Capital City. JH.

**Youth and the U. N.** mp MINNESOTA 25min sd col \$115. The UN's goals, how its work is related to the interests of high school students, how to learn about the UN's program and problems and the people who work there, America's role in the UN.

**Waste Not—Want Not** mp CCHR 28min sd b&w \$30 free loan. Objectively and graphically brings to life the bipartisan Hoover Commission's blueprint for "better government at a better price."

## SOCIAL STUDIES: HISTORY

**Age of Discovery** mp YAF 15 min sd col \$150 b&w \$75. An all-animation film explaining the cause-and-effect relationship of events of the late 15th century as they led to the discovery of the New World. Int.

**America Develops World-Wide Interests** 9fs EYE si col \$25 or \$4 ea. Covers the period from 1900 to 1920 in American History. **The Spanish-American War, Island Possessions, Panama Canal, Growth in National Power—The Pan-American Union, Developments Abroad—Immigration, American Interests in Asia, First World War, United States Joins the Allies—The Peace Treaty, Social and Political Changes.** Int.

**American Battleground** mp NYSDC 20 min sd col free. Recreates the period from 1775 to 1783 in New York State giving some of the flavor of the skirmishes, victories, and defeats in scenes of historic houses, forts, and battlegrounds.

**American Flag (Story of Old Glory)** mp EBF 14min sd col \$125 b&w \$62.50. Featuring actual locations and dramatized events, vividly documents the origin, growth, and meaning of our national flag. Children give the Pledge of Allegiance; Columbus brings the first flag to America; legend of Betsy Ross; Stars and Stripes made official by Congress; Francis Scott Key; growth of the flag; symbolism. EI-SrH.

**Beginning at Plymouth Colony** mp NEP 13min sd b&w \$60. First of the

American Adventure Series. Dramatizes the before-and-after story of the abandonment of Plymouth Colony's communal storehouse and the principle of public ownership, and the adaptation of the political-economic principles of private ownership and individual self-reliance. Live-action and animation.

**Cracks in the Soviet Empire** fs. NYTIMES si b&w \$2.50. Problems created for Russia's leaders by nationalism and hate of communism in the satellites. Shows the advantages that Russia has drawn from her empire and the resources of the different lands. Surveys the history and struggles for independence of the area. Chronicles the Communist seizure of power and draws a picture of how the Communist system works.

**Craftsman in Colonial Virginia** fs CW. Part of a new series of filmstrips on colonial America, the story is based largely on the life of a bootmaker and included in the film strip are scenes of the apprenticeship of the bootmaker's son and scenes of other crafts.

**Colonialism in Retreat** fs NYTIMES 54fr si b&w \$2.50. Current advances toward independence and the turmoil and conflicts that are encompassed in this movement. Develops the steps that saw the decline of the colonial empires and brought freedom to hundreds of millions in Asia and Africa. Deals with the social, political, and economic problems of the newly independent nations. Problems of defense and economics for the West caused by the decline in colonialism.

David J. Goodman, Inc., 245 Fifth Ave., New York 16, N.Y.

**Dakota Wars and Reservation Life** mp NEBRASKA 29min sd b&w \$85. Complete series of 13 \$950. Move into the plains and wars with the whites from 1849 to 1890; Custer's lost stand; eventual white domination.

**Dawn of Plains History** mp NEBRASKA 29min sd b&w \$85. Earliest white penetration of the Great Plains, how European goods reached the Indians, evidences of great unrest with Indians concentrating into large villages, some fortified.

**Declaration of Independence** fs VEC 21fr si b&w \$3.50. History of the Declaration and exploration into the meaning of certain phrases therein. Based on "You and Your U. S. A." SH.

**Development of the American Republic: Establishing the Republic** 6fs SVE si col \$33 or \$6 ea. Designed to set forth the forces that have contributed to the building of America, foundations of a free society, origin and development of democratic ideals, American heritage, cherished principles of freedom. Titles include **New World and a New Hope** (51 frames), **English Settlements** (53), **Establishing Social Life in a Wilderness** (49), **Revolution and Independence** (45), **New Experiment and a New Nation** (48), **Development of the Thirteen Colonies** (47). JH.

**Early American Civilizations** mp CORONET 11min sd col \$100 b&w \$55. Ruins of great cities such as Chichen Itzo, beautiful Mayan carvings, the Teotihuacanos' Pyramid of the Sun, the Aztec calendar stone, fine Incan weavings, and other art objects, ruins and reconstructions attest to the highly developed civilizations of the Indians of early America. Influences of these cultures upon our own indicated. Int.

**Fall of Nations** mp NEP 13min sd b&w \$60. Basic causes for the downfall of notions — political, economic, and moral decay — examined with regard to Old Babylon, Ancient Egypt, Assyria, Egypt at the beginning of the Christian Era, New Babylon, Phoenicia, Persia, Greece, and Rome.

**Famous Americans** 6fs JAM si col \$31.50 ea \$5.75. Typically American dramas of courage in the face of physical and financial handicaps, persistence, and a will to blaze a new trail. **Thomas Alva Edison**, **Wright Brothers**, **George Washington Carver**, **Alexander Graham Bell**, **Theodore Roosevelt**, **Jane Addams**. Int.

**Forgers** mp NEBRASKA 29min sd b&w \$85. The poverty-stricken peoples of 2000 B.C. to 500 A.D.; story of their changing fortunes revealed by buried fireplaces and other finds.

**French Revolution** mp CORONET 16min sd col \$150 b&w \$82.50. The controversial issues, great personalities, and turbulent events leading up to and through the French Revolution are brought to the screen through the experiences of M. Raget, lawyer and member for the Third Estate. Dramatized episodes in European settings bring vitality to the study. JH.

**From Nomad to Villager** mp NEBRASKA 29min sd b&w \$85. New way of life for the pre-historic Indians: settlement in permanent villages—new tools, pottery, elaborate religious ceremonies.

**From Trail to Rail** mp NEBRASKA 29min sd b&w \$85. Steamboat and river towns; overland freighting; stage

coach and Pony Express; telegraph and railroad.

**Full Color Picture Story of America** 8fs DAVCO si col \$40 with supplementary text. Captioned art work provides 325 new pictures on American history. The eight strips deal with exploration, the revolution, war of 1812 and westward movement, civil war and reconstruction, growth of big business and Wilson's election, World War I to the New Deal, rise and fall of dictators and our entry into World War II, D-day to Eisenhower's re-election. SH.

**Heritage U.S.A.** rec FOLKWAYS. Includes speeches by Daniel Webster, John Brown, Edward Everett, and Abraham Lincoln; documents including the Declaration of Independence, Bill of Rights, etc.

**How the Indians Lived** 5fs JAM ea 40fr si col \$25.95 ea \$5.75. A selection of tribes living in different parts of the country with emphasis on the original customs which exist today. Done in accurate art work. **Woodland Indians** (Iroquois), **Plains Indians** (Dakota), **Southwest Indians** (Hopi), **Southwest Indians** (Novajo), **Northwest Indians** (Salish).

**Hotline to Freedom** mp CRUSADE sd b&w free. Account of the trouble that Communists are now having in Eastern Europe and America's stake in the struggle of Eastern European countries for freedom. Scenes show indoctrination of children in Communist dominated lands, life in Hungary before the revolt, and recent fighting there.

**Light of Ethiopia** mp EFE 27min sd b&w \$155. History of the annexation of Ethiopia by Mussolini and consequences of this aggression; scenes of Ethiopia today and its emperor, Haile Selassie.

**Louisiana Purchase: America's Best Buy** mp NEBRASKA 29min sd b&w \$85. Mississippi Valley in world diplomacy; significance of the Louisiana Purchase; Lewis and Clark expedition.

**Man, Animal, Climate and Earth** mp NEBRASKA 29min sd b&w \$85. Mysteries of early man revealed from discovery of early human camping sites in Southwestern Nebraska . . . what is known of the climate, behavior of streams, the animals and men.

**The Mayas** mp CORONET 11min sd col \$100 b&w \$55. First films of the ruins of the ancient city of Tikal in Guatemala introduce this survey of Mayan civilization. From Tikal of the Old Empire to Uxmal and Chichen Itza of the New Empire, the remarkable achievements of the Mayan Indians in agriculture, architecture, sculpture, astronomy, and mathematics. Int.

**Men on Your Money** fs VEC 32fr si b&w \$3.50. Describes the important contribution made by each man to American history and their basic position with regard to thrift. Int.

**Near East Powder Keg** fs TIMES 57fr si b&w \$2.50. Social upheaval in the Near East, growth of nationalism in reaction to past Western imperialism, impact of oil production on the area, different countries in the region, relations of Israel with Arab states, actions of the West for protection of its interests, Arab anti-Western drive led by Nasser, Communist bloc maneuvers.

**Oregon Trail** mp EBF 25min sd b&w \$112.50. Filmed in the reconstructed frontier town of New Salem, Illinois, and along the Oregon Trail, recreates

the saga of the Westward crossing of the American continent through the eyes of a pioneer family; details of the journey. El.

**Our Two Great Documents** mp NEP 13min sd b&w \$60. American Adventure Series. Circumstances out of which grew the commanding need for the Declaration of Independence and, later, for the Constitution. Examines basic philosophy of the Declaration and provides background scenes in New England.

**Pioneer Journey Across the Appalachians** mp COR 14min sd col \$125 b&w \$68.75. A North Carolina family journeys westward before the Revolutionary War. Why the early settlers moved west, how they traveled, and other concepts dramatically visualized. El.

**Real Davy Crockett** rec FOLKWAYS. The real Davy, despite limited schooling, distinguished himself as a hunter, a hero, and a representative in Congress.

**Roger Williams: Founder of Rhode Island** mp EBF 28min sd b&w \$125. Dramatizes one of the important events in early American History — the conflict which led to the founding of Rhode Island, the first truly democratic colony in the New World. JH.

**Roman Wall** mp CORONET 11min sd col \$100 b&w \$55. An examination of the 73-mile-long wall constructed by Hadrian in England—its forts, mile-castles, turrets, barracks, and storehouses—and what it reveals of the strength and weaknesses of the Roman Empire. Clarification by dioramas, drawings, and animation. SH.

**U. S. and Its Alliances** fs NYTIMES 54fr si b&w \$2.50. Creation of NATO, SEATO, the Bagdad Pact, and other alliances because of the threat from the Communist bloc; strength of this bloc with free world alliances compared; problems facing free world alliances, such as decline of colonialism, differences over attack on Egypt, altered defense strategy forced by new weapons development, question of German re-unification; widening responsibilities of the U. S. as leader of free world alliances.

**United States Expansion: Louisiana Purchase** mp CORONET 14min sd col \$125 b&w \$68.75. Background of the territory's purchase, its exploration, settlement, and importance to the U. S. Re-enactments, map animation, and authentic sites recreate the episodes in American history. SH.

**War of 1812** mp UW 20min sd col \$120.23. Causes and highlights illustrating the origins of such phrases as "Old Ironsides," and "Don't Give Up the Ship."

**World History: Prehistoric Man Through the River Cultures** 4fs SVE si col \$21 ea \$5.50. Progress of man in significant eras, from prehistoric times with emphasis on social, economic, and cultural heritage received from the distant past. **Old Stone Age** (33 frames), **New Stone Age** (39), **River Cultures: Egypt** (46), **River Cultures: Mesopotamia** (45). Int.

**World War II: Prolapse, U.S.A.** mp EBF 28min sd b&w \$125. Brings to life some of the kaleidoscopic events of the stirring period between the end of World War I and Pearl Harbor. It provides a chronological account of major occurrences. JH.

St. Charles, Illinois

# Check these 10 points in selecting 16 mm sound projectors

QUESTION	WHY THIS IS IMPORTANT
1 Does it have color-coded threading?	<input type="checkbox"/> Makes threading and operating fast and simple, even for beginners.
2 Does it have safety film trips?	<input type="checkbox"/> Stops film movement instantly in case of film emergency. Guards against costly film damage.
3 Does it have Hi-Lite optical system?	<input type="checkbox"/> In connection with Mark II shutter, throws 38% more light on the screen. Assures bright pictures even in hard-to-darken rooms.
4 Does it have stationary sound drum?	<input type="checkbox"/> Assures clear, smooth sound. Has no moving parts to get out of adjustment. Scans full sound track.
5 Does it have visible one-spot oil system?	<input type="checkbox"/> Transparent filling tube shows oil level. Reservoir automatically feeds oil to all points as needed.
6 Are both reels mounted on top of projector?	<input type="checkbox"/> No overhanging reels to present a "traffic hazard." Projector can be set up on any level surface, even the floor.
7 Does it have single drive sprocket?	<input type="checkbox"/> Eases film stress, because same sprocket controls film entering and leaving projector.
8 Does it have compensating film shoes?	<input type="checkbox"/> Automatically adjust themselves to varying film thicknesses. Guard against splices catching.
9 Does it have 180° swing-out lens?	<input type="checkbox"/> Facilitates threading and cleaning of both aperture and film channel.
10 Is it adaptable for magnetic recording?	<input type="checkbox"/> Complete magnetic recording on film and playback can be added at any time by simply connecting Victor Magnesound.

**ONLY VICTOR OFFERS SO MANY IMPORTANT FEATURES**

The above 10 points give a quick picture of the advanced features you should expect in a modern 16 mm sound projector. Only a Victor brings you *all* of them. And with every Victor you also get the "standard" features of all quality sound projectors, including 2 speeds for sound and silent film, still picture, and reverse projection.

Particularly important is Victor's new red, white and blue color-coded threading. Color lines on projector clearly show where to thread and the sequence of threading. Other time-proven features—exclusive with Victor—are safety film trips, top-mounted reels, and power rewinding with no change of belts or reels.

Victor was first to develop 16 mm projectors and through the years Victor has been first to perfect improvements that assure finest pictures—finest sound—easiest operation. Victor long has been the choice of A-V experts in 73 countries.

**Victor Assembly 10** — Lightweight projector for small audiences. Amplifier operates at 10 watts continuous output, 18 watts peak. Available with 9" speaker, top-mounted and fully baffled—or separately cased 12" speaker as shown.

## NEW VICTOR VIEWER

The first professional 16 mm viewer with "frame counter" priced under \$100. Large 3 1/4" x 4 1/4" screen is brilliantly lighted by 75-watt lamp. Equipped with f2.8 triplet lens. All optics coated.

# Colorful Photoplay Filmstrips

Prepared by William Lewin, Ph.D.

In spite of pleadings, Columbus refused to turn back.

**Columbus**—Black-and-white, based on the J. Arthur Rank production starring Fredric March. 55 Frames. \$3.50.

**The Vikings** — In full color, 47 frames, based on the Kirk Douglas production.

**Hansel and Gretel** — In full color, 42 frames, the highlights of the beloved fairy tale as performed by the charming Kinemins of Michael Myerberg's screen version, released by RKO Radio Pictures. \$7.50.

**Greatest Show on Earth** — In full color, a lively pictorial guide to the circus, based on Cecil B. DeMille's Technicolor photoplay, which won the Academy Award in 1953 as the best picture of the year. 40 frames. \$7.50

**Ulysses** — In full color, 64 frames, a pictorial guide to the new Paramount screen version of Homer's *Odyssey*, produced in Italy. An invaluable aid to the study of the classic. \$7.50.

**Knights of the Round Table** — A set of two filmstrips. Part One, 25 frames, explains the background of the story, its theme, its significance as an early attempt to organize a league of nations and how the United Nations Security Council is the Round Table of today. Part Two, 28 frames, tells the colorful story of the great legend, based on the M-G-M photoplay. \$7.50.

**A Lesson in Mythology** — Explains Andromeda, the Minotaur, Iphigenia, etc., based on M-G-M's *The Living Idol*. 25 frames, color. \$7.50.

**The Glass Slipper**—The charming fairy tale of Cinderella, told in a new way, based on the M-G-M photoplay. 36 frames in full color. \$7.50

**Alexander the Great** — Biography of the first man to conquer the civilized world, based on the photoplay. Shows Alexander's effort to unite Europe and Asia, a task with which the U.N. is still faced. 55 frames. \$7.50.

**Adventures of Robinson Crusoe** — In full color, 50 frames, a clear pictorial guide to the Defoe classic, based on the United Artists screen version. \$7.50

**Richard III** — Based on Laurence Olivier's colorful screen version of Shakespeare's famous play. 48 frames. \$7.50

**Romeo and Juliet**—Shakespeare's great love story illustrated in color from the J. Arthur Rank production filmed on location in Verona and other Italian cities. 44 frames. \$7.50

**EDUCATIONAL & RECREATIONAL GUIDES, Inc.**

10 Brainerd Road, Summit, New Jersey

**THE UNION**—The strength of the Union captured in stirring song, the shattering sound of the Bull Run cannonade and the Gettysburg Address as read with profound conviction by Raymond Massey. An album to awaken interest, and to encourage creative thinking in students of all ages. DL244 \$10.00

**THE CONFEDERACY**—The gallantry of Confederate troops confirmed in songs and marches rendered by Richard Bales conducting the National Gallery Orchestra, soloists and chorus. Highlights: General Lee's unforgettable farewell orders at Appomattox and pages of stirring on-the-scene photographs. A powerful means for conveying the intensity of feeling in the South during the Civil War. DL220 \$10.00

# It's a matter of recorded history!

"The Union" (DL244) is a companion album to the previously released "The Confederacy" (DL220). When used together, they re-create the sounds and sentiments of the War between the States in a depth that has been heretofore impossible. They lend themselves splendidly to special projects. Organize your class into two groups, assign various members to the opposing "teams" (the Blue and the Gray), and send them scurrying to the library to do extra research. They can hunt up new songs, further illustrations and books, and recapitulate the campaigns and political struggles. There is no need of an actual war between the groups, but the contest can center on which "team" presents the most colorful, imaginative picture of its side. In its own turn, the Drama Department may find this an excellent jumping-off spot for a reading of "The Red Badge of Courage" using these albums as musical background and incorporating the material gathered by the research groups. The possibilities of projects stemming from these and countless other Columbia records are well-nigh endless. Send for Columbia's complete numerical catalog. You'll be amazed at the scope of material available, and all Columbia records are recorded in Guaranteed High Fidelity, your assurance that sound is faithfully reproduced in perfect balance with full attention to the finest detail.

**NOW AVAILABLE:** Columbia's complete numerical catalog is now available on subscription for the first time. Subscription to this low-cost service will keep you up-to-date on all Columbia records, and will also entitle you to future teaching aids and announcements of new records. Fill in the attached coupon and mail it today.

## COLUMBIA PHONOGRAPHS

### High Fidelity Manual Portables

HF-1

HF-2

Both models HF-1 and HF-2 are noted for excellence of sound reproduction. Their sturdiness and portability make them ideal for classroom, library and auditorium use. The units play all speeds, have built-in 45 rpm adapters; both are equipped with two jeweled styli and powerful amplifiers. Speakers and 30-foot extension cord are housed in detachable lids. HF-1 has two 6" speakers; deluxe model HF-2 has two 8" speakers, microphone with separate fading control for P.A. system use, and storage space for EP-1 (earphone attachment), as well as input jack for use of tuner or stereophonic system.\*

# Complete Versatility!

## SCHOOL MASTER 500

**Remote Control Projector for Film Strips or Slides**—Here is the most versatile classroom projector available for audio-visual instruction. Self-contained—there are no parts to remove or attach. It projects 35mm film strips by remote control or manual operation. Slides are projected manually and the change from film strips to slides may be made in seconds. Or, semi-automatic or Airequipt automatic slide changer (available as an accessory) may be permanently installed.

School Master's 500-watt illumination and precision optical system put sharp, brilliant images on the screen—even in partially lighted rooms. Film

passes between smooth, twin glass plates which keep film flat and in the exact plane from edge to edge at all times. By replacing the remote control cord with the cord from a tape recorder or record player, synchronization of film strip and sound can be attained. Other advanced features: foolproof single-slot threading; fingertip framing; handi-handle for easy transportation; 10-foot cord; smooth action picture change without backlash; 4-bladed fan for efficient cooling; all-aluminum casting for durability, ruggedness and light weight.

*Illustrated above with accessory slide changer and rewind take-up.*

*Have your Graflex A-V dealer demonstrate this versatile projector for you in your own school.*

# On the SCREEN

## Cover: "Bannister Baby"

The cover study selected for this issue of Educational SCREEN, was produced by photographer Constance Bannister, for Pix Film Service, Greenwich, Conn., who kindly allowed us to use it as a fitting subject for the beginning of a new year. We are intrigued by this genial little tyke and heartily in sympathy with his philosophy of lightly tossing off the burden of responsibility. Would it could ever be done that easily. We felt, at least, that all would get a laugh and a "lift" from just looking at this baby, and so — our reason for choosing this subject.

## "Correction" Is In Order

In the "Blue Book of Audio-Visual Materials" section of the December 1957 issue of this magazine, several items were mistakenly and incorrectly listed and we hasten to rectify this error as quickly as possible. Each of the items in question were films from the series "THE MAGIC OF THE ATOM," produced and primarily distributed by Handel Film Corporation. In each of the listings, AEC was given credit for distribution and each was listed as "free." Contrary to this, and notwithstanding the fact that the New York office of AEC does have one set of the series on hand and does loan them upon request, this constitutes only a small fraction of the overall distribution activity covering forty countries all over the world, and handled by Handel Film Corporation. Also, each of the films is sold at the list price of \$55 per segment, and rentals range from five to ten dollars according to arrangement.

The eleven segments of the educational film series "THE MAGIC OF

THE ATOM" that were listed incorrectly, are as follows: under the heading of Agriculture, on page 594, are "Atomic Age Farmer" and "Atomic Greenhouse." On page 606 under the heading of Industry, are "Atomic Metallurgy" and "Power Unlimited." On page 601, under heading Health and Safety, is "Protecting the Atomic Worker." On page 609 under Medical Science, are "Atom and the Doctor" and "Atomic Pharmacy." On page 617 under Science: Biology, is "Atomic Zoo" and on page 620, under the heading Science: Physics & Chemistry, are "Atom Smashers," "Atomic Alchemist" and "Atomic Furnaces."

## Correction Number Two

On page 624 of the "Blue Book of Audio-Visual Materials" section, the heading 22 *States in Travel Slides* begins by being incorrect. The MESTON Travel slides cover all 48 states and in addition, are packaged 4 in a group (not eight) selling for 98c per package.

## Forthcoming '58 Issues

Two important Spring issues are being planned for 1958. The February issue of Educational SCREEN will be devoted to the subject of the CHURCH and the part Audio-Visuals play in religious instruction. Then in April a special feature will be A-V Aids for Teachers of English. The April issue will stress the Audio part of Audio-Visuals, as it did in the 1957 issue. Because we feel that occasional emphasis on one subject is of particular value to instructors in special fields, we suggest additional attention to be given to these forthcoming issues.

—GM

**new  
coronet  
films  
at major  
grade levels**

From Coronet's latest spectacular, *HIGH SCHOOL PROM*

The 16mm films described below represent a continuation of Coronet's production program of fine educational films for all levels. Each film is the result of months of research both on the subject for content and on the curriculum to determine teaching needs. They will serve a real purpose by bringing to the classroom vivid, lasting accounts of a variety of subjects.

The films described below are available in full, natural color or in black-and-white

**FOR PRIMARY GRADES**

**THE FROG PRINCESS** (½ reel, 5 min.) Here is an exciting fantasy in a quaint Fairyland setting. A beautiful princess under a spell as a frog is freed by a handsome prince from her wicked enchantment. *Language Arts.*

**LIVING AND NON-LIVING THINGS** (1 reel, 11 min.) Familiar examples illustrate the differences and similarities between the two great groups—living and non-living things. *Science.*

**MR. AND MRS. ROBIN'S FAMILY** (1 reel, 11 min.) Beautiful nature photography brings us the dramatic story of a mother and father robin and of the two groups of fledglings they raise between spring and fall. *Language Arts.*

**MOTHER GOOSE RHYMES: BACKGROUND FOR READING AND EXPRESSION** (1 reel, 11 min.) This imaginative film breathes life into a host of familiar nursery rhyme characters, including Mother Goose herself. Filmed at the fabled Storytown, U.S.A. *Language Arts.*

**FOR INTERMEDIATE GRADES**

**LET'S BE CLEAN AND NEAT** (1 reel, 11 min.) Examples in this film demonstrate how cleanliness and neatness contribute to family life, social acceptance, good health, and a feeling of well-being. *Health.*

**THE PANAMA CANAL** (1 reel, 11 min.) Surveying the history of the Canal, this film explains its operation and significance for world transportation. A trip through the canal with a view of surrounding cities is a high point. *Geography.*

**STORY OF OUR NUMBER SYSTEM** (1 reel, 11 min.) Here is a pictorial survey of the historical development of numbers—and how it led to a place holder, the zero, and to our present symbols. *Arithmetic.*

**UNDERSTANDING OUR EARTH: ROCKS AND MINERALS** (1 reel, 11 min.) This description of the three main classes of rocks relates them to the conditions which produced them. The varied uses of rocks and minerals are explained. *Science.*

**THE WEST INDIES: GEOGRAPHY OF THE AMERICAS** (1 reel, 11 min.) This film examines modern trends in industry, the traditions of large plantations, and the population, terrain, and resources of these beautiful islands. *Geography.*

**FILMS FOR JUNIOR AND SENIOR HIGH SCHOOLS**

**ENGLISH LITERATURE: THE EIGHTEENTH CENTURY** (1¼ reels, 13½ min.) The trends of eighteenth-century literature are analyzed through a presentation of excerpts from works of some great writers of the period. *English Literature.*

**ENGLISH LITERATURE: THE ELIZABETHAN PERIOD** (1½ reels, 13½ min.) We see how the trends of life in Elizabethan times affected the literature of the period. Excerpts from writings of the age's greatest authors are presented. *English Literature.*

**HIGH SCHOOL PROM** (1½ reels, 16 min.) The film is built around an actual prom. Four students illustrate some aspects of this exciting event—preparation for it, etiquette during it, procedures to be followed afterwards, behaving creditably, and dining out. *Guidance.*

**RUBBER IN TODAY'S WORLD** (1 reel, 11 min.) This review of the history of rubber stresses its importance and covers modern production processes. Synthetic rubber is discussed. *Social Studies, Geography.*

## "Relic" Gets Varied Reaction

Editor: Have just finished reading your thought-provoking editorial "Relic of the Past." Since I am leaving for Danville within the hour I do not have time to think it through to the extent that I would like. However, as soon as I get back at the end of this week I plan to check with one of the audio-visual dealers here in Richmond who handles closed circuit television equipment and get a rough estimate on what it would cost to set up closed circuit television in typical schools of various sizes and then take up your idea with the director of our school buildings service in the State Department of Education.

I think your idea has a great deal of merit and I wonder why we had not thought of it sooner. If you have anything further specific in regard to this I would appreciate having it.

Many thanks for jarring my thinking, as you always do in your stimulating editorials.

W. H. Durr, Supervisor

Bureau of Teaching Materials  
State Board of Education  
Richmond 16, Va.

Editor: I think you go too far in your editorial "Relic of the Past." Closed circuit television certainly has many uses in the school, I agree. But television, no matter how large the screen, how close the viewer, how good the sound, does not have the same quality of experience as the real thing or person. It is a mistake — and a disservice to educational television, I think — to suggest that nothing is lost when the actual event is replaced by reproduced sound and image.

For in fact, much is lost in the reproduction, by whatever medium. We fail to realize this because we do not often compare the reproduction with the original: we compare it with another reproduction, recording against recording, film against film. In truth we do not often have the opportunity to compare original and reproduction; we are not present in the recording studio, for instance, as a rule.

This is no stricture against audio-visual media in the classroom; a second-hand experience is often much better than none at all. But we have to bear in mind that any medium has its limitations. Being aware of the limitations of the television medium, and the loss in quality of experience that it includes, I do not accept your proposal that the auditorium is replaceable by television.

Burnett Cross

Educational Consultant  
170 East Hartsdale Avenue  
Hartsdale, New York

## Appreciation Continues

Editor: You have again performed a very worthwhile service for the whole educational field in your editorial in the November issue of "The Screen," and the reprint of the letter by Ruth Walsh.

I guess that most of us have been fighting this sort of thing for many years. I mean the old business of the low bid taking the business away from the legitimate dealer who has really worked it up over a period of often many months or many years and repeated calls. Fortunately there are a great many superintendents and business managers who understand what the audio-visual education dealer can do for them. Unfortunately, however, in a great many cases their hands are tied by local laws which make the low bid mandatory.

I thank you again for the timeliness and excellence of your editorials.

Herbert M. Elkins

Visual-Acoustic Teaching Tools  
10031 Commerce,  
Tujunga, California

## A Plea for Pen-Pals

Editor: Will you kindly introduce me to some American citizens (ladies and gents) who may be interested in a Pen-friendship? I shall be glad to send them some gifts of Indian novelties such as Indian toys (wooden and leather), Indian sweets, and the used postage stamps of India and neighboring countries. I would also welcome novelties of your country like the Fountain-Pens, Pencils, small Pocket-Knives, etc. To any friends interested in learning Indian languages, Urdu and Hindi, I shall be specially happy to assist them and I may also send them elementary books on these subjects. But as the Air Mail postage from India is very costly, I hope my friends will send me the International Postage Coupon for reply. But it is not very necessary. It all depends upon their courtesy.

Miss Rokaya Khtoon

Huck House  
Thavai Mahalla Lane  
Bihar-Sharif,  
Behar, India

## "Advice" is Far-Reaching

Editor: As I am in charge of the tape recording exercises in our Department, Educational Screen & Audio-Visual Guide has proved of very great value to me. One single example: "Sound Advice" in the May number!!

## Progress in TV Teaching

When school opened in September, TV was used to implement instruction for thousands of pupils in at least a score of cities, clearly indicating the expanding role of television in formal education, according to George L. Hall, director of development for the Educational Television and Radio Center.

About 15 of the non-commercial educational TV stations affiliated with the Center are broadcasting lessons directly into schools, the official noted, and at least 10 school systems are teaching by especially installed closed circuit TV facilities in their own buildings.

In all cases, Hall said, the television camera is being used to aid teachers faced with larger classes and a shortage of facilities. At the same time, quality instruction is being brought to pupils by putting top teachers before the cameras, he added.

Educational station WQED in Pittsburgh, for example, is for the third consecutive year carrying on classroom teaching activities in selected Pittsburgh schools.

Teachers and pupils in New Orleans are getting TV help for the first time. One of the newest stations in the ETV network is broadcasting instructional programs into 103 of the city's schools.

Other noncommercial stations which are aiding in classroom instruction in their respective communities include those located in Chapel Hill, N.C.; Chicago; Cincinnati; Detroit; East Lansing; Houston, Tex.; Lincoln, Nebr.; Memphis; Miami; the three stations in Alabama, located in Munford, Birmingham and Andalusia; New Orleans; Oklahoma City; Seattle; St. Louis.

Whole school systems are connected for TV teaching on an experimental basis in North Carolina and Virginia as a result of grants for television instruction given last year by the Fund for Advancement of Education. The Fund, hoping to determine the full possibilities of TV as a tool of education, is supporting both closed and open circuit TV teaching projects in several cities, among them Atlanta, Cincinnati, Detroit, Miami, Norfolk, Oklahoma City, Philadelphia, and Wichita.

Nebraska and Oklahoma are involved in state-wide experiments in teaching by television.

One of the most well-known TV projects, that being conducted in the Hagerstown, Md., public schools, enters its second phase this year.

## Ampro-SVE Sales Via Graflex

A joint announcement by Graflex, Inc. and the Society for Visual Education, Inc., advises that effective January 1st Graflex "will assume the marketing of all Ampro-SVE audio-visual equipment." Authorized dealers who have been handling the still and motion picture projectors, tape recorders and other items in the Ampro-SVE lines will continue to do so, with the added advantage of reduced transportation costs from the nearest Graflex Branch. H. A. Schumacher, Graflex vice-president, will be in charge of sales. SVE will concentrate solely on the production and sale of filmstrips, through its field staff and its dealer representatives. The SVE headquarters remains at 1345 Diversey Parkway, Chicago 14, Ill. The Graflex headquarters address is Rochester 8, N.Y.

## Degrees at Indiana U.

## "Films in Canada - 1958"

This will be the theme of the Conference on Films to be held in Toronto, January 22nd and 23rd, 1958, in the Unitarian Church, St. Clair Avenue, Toronto. This will be the first Conference of its kind in Canada, and will be sponsored by the Canadian Film Institute in co-operation with ten other Film and Education organizations.

Erik Barneuw, Director of the Center of Mass Communication of Columbia University, will give the key-note address on "Film To-day." Glen Burch, of the Ford Foundation for Adult Education will speak on "Films and Adult Education."

A feature of the session will be a discussion of "What's wrong with our films?" by distinguished Canadian representatives of film-makers, film-sponsors and film-users, under the chairmanship of Graeme Fraser, Vice-president of Crawley Films Limited, Ottawa.

gree and 15 on a doctor's degree. The last degrees were received from 34 different colleges and universities, from 14 different states and four foreign countries. The state of Indiana led with 8, followed by 6 from Illinois, 5 from New York, 4 from Ohio, and 3 from both Tennessee and Alabama.

# New ideas in teaching and training tools

... crafted by Bell & Howell, the recognized leader in audio-visual equipment. Here are only samples of the broad line that includes: New Electric Eye Cameras ... Time and Motion Cameras ... Slide and Movie Projectors ... high fidelity Tape Recorders ... all with Bell & Howell's famed engineering quality. All are sold and serviced by the nation's most experienced A-V dealers.

**Spool Load Electric Eye Camera**—automatic exposure control. Lets everyone shoot expertly. 240EE.

**Automatic Slide Projector**—Changes slides automatically or by remote control. Easiest to use. Robomatic.

**Brilliant Multipurpose Projector**—same versatility as 724G, with extra brilliant 750 watt illumination. 724A.

**4-Speaker Tape Recorder**—high fidelity for music appreciation. Unique sound system, simple operation. 300L.

**Deluxe Portable Tape Recorder**—superior 2-speaker model, versatile and compact, newest control features. 775.

**Heavy Duty Sound Projector**—meets all projection situations, conference rooms to auditoriums. 16mm. 614CB.

**Most popular sound projector**—due to outstanding sound and pictures, proven dependability. Magnetic recording model also available. 385CR.

Ask your Bell & Howell A-V dealer for a demonstration of these products. For full descriptions and prices, call him today, or write Bell & Howell, 7117 McCormick Road, Chicago, Illinois.

*FINER PRODUCTS THROUGH IMAGINATION*

## Western A-V Conference

This year NAVA will hold its Western Conference at the Huntington-Sheridan Hotel in Pasadena, Calif., January 22-25. The Conference will be devoted to working out ways in which audio-visual dealers can be more helpful to a-v users of equipment, materials and supplies in business and industry, education, the church field, and other areas of activity.

Dr. Ray Denne, San Diego County audio-visual director, will be the theme speaker. Dr. Frances Noel, chief of the California Bureau of A-V Education; Dr. John S. Carroll, professor of education at the Santa Barbara campus of the University of California, and Don White, NAVA executive vice-president, will also be featured speakers.

Paul Cox, who has been appointed Conference chairman, wants all NAVA members to know they are invited to attend and that every effort is being made to make the Conference an outstanding success.

## Festival Meets in Columbus

Sixth annual film festival of the Film Council of Greater Columbus (Ohio) will be held April 16-17, 1958. Entry preview deadline March 1. Address Film Council, Daniel F. Prugh, president, 280 E. Broad Street, Columbus 15, Ohio.

## Annual Conference California Education Assn.

Teachers, administrators, supervisors, and other persons interested in education will have an unusual opportunity to attend the annual conference of the AUDIO-VISUAL EDUCATION OF

Dr. Stephen M. Corey

CALIFORNIA which will meet at Asilomar, January 31, February 1, and 2, 1958.

The keynote speaker for the conference will be Dr. Stephen M. Corey, Dean and Professor of Education, Teachers College, Columbia University. He will speak at the Friday morning general session on "FUTURE OF MATERIALS IN THE CURRICULUM-PRACTICE AND RESEARCH POINTS THE WAY." The theme for the Saturday morning address by Dr. Corey will be "A NEW LOOK AT CALIFORNIA."

One of the high points of the conference will be the demonstration by the Army Language School under the leadership of Colonel Walter E. Kraus, Commandant, United States Army Language School, Presidio of Monterey. The demonstration will be concerned with the materials, techniques and equipment used by the army to implement the instruction in the Army Language School.

## Illinois Audio-Visual Association Elects

The annual fall meeting of the Illinois Audio-visual Association was held in Rockford, Nov. 1 & 2. The two day program included greetings from the city and county superintendents, presentation of Wheaton College campus AV by Grosvenor C. Rust, and of local AV conference techniques in Ohio by Dr. Clyde Miller. There were panel presentations on local resources and on "What I Would Like from an AV Department."

At the annual business meeting the following new officers were elected: president, Horace Wollerman, Director AV Education, Alton Community Unit School; vice-president, Virgil Alexander, Director of Instructional Materials and Evening School, Northern Illinois University; Treasurer, Mrs. Violet Auwarter, Director of AV Education, Jacksonville Public Schools; executive-secretary, Mrs. Beatrice S. Simmons, Illinois Office of Public Instruction, Springfield. Three new members of the Executive Committee are J. Ross Young, Director AV Education, Richwoods Central High School, Peoria; Robert Burns, AV Director, Evanston District 65; and Verne Stockman, Eastern Illinois University. Hold-over members of the Executive Committee are: Peers Ray, Director of Visual Aids, Rockford Public Schools; Roberta Lynch, Director AV Education, Moline; Don Crawford, Western Illinois University; Roy DuShane, Superintendent of Schools, DuPage County.

## A-V in India

The governments of India's Jammu and Kashmir provinces have made significant strides in surmounting the age-old barriers of geographical and cultural isolation. One of their most effective media is a recent innovation, a mobile motion-picture unit equipped with Victor 16mm projection and sound equipment, fitted on a Jeep van. Day or night, regardless of weather conditions, a sizeable audience invariably collects.

The films shown are primarily educational, with some entertainment included to maintain enthusiasm. For night showings, a portable 8' x 6' screen and the original 12" Victor speaker replace the units mounted in the van.

The cinema-van has operated with such remarkable durability and reliability that its designer has been commissioned to build four more.

## People in the News

No. Hollywood, Calif.: Don E. Warner and W. E. Williams are president and v.p. respectively of the new firm of Audiotronics Corporation, North Hollywood, Calif. Both were formerly with Newcomb Electronics Corp., Warner as chief engineer and v.p. They plan a full line of "A.T.C." radios, record and transcription players and other electronic items for school use.

Pres. Don E. Warner, left, and Vice Pres. W. E. Williams

Extreme close-up of scanning beam optics, sound drum, and film sound track as they appear on a Kodak Pageant Sound Projector. Picture shows them about 4½ times actual size.

## How to make your movies sound as good as they look

If you want to hear all the sound on a 16mm sound track, your movie projector should have an adjustable scanning beam and a well-baffled speaker, among other refinements. Here's why...

The photographic (optical) sound track on your 16mm films is a "picture" of the sound vibrations you want to hear. To "see" this sound picture, a 16mm projector scans the variations in area or density with a tiny beam of light.

The beam shines through the sound track and registers its variations on a photoelectric cell. The cell turns these modulated light rays into electrical impulses and sends them to the amplifier, then on to the loud speaker.

### 50 to 7000 cycles per second

The best 16mm sound film recording picks up sound waves varying from 50 to 7000 cycles per second. If you want to hear this full frequency range, your projector must be able to reproduce *both* the highest frequencies (6000-7000 cps.) and the lowest (50-100 cps.). When your projector won't do this you lose much of the naturalness and value of your sound reproduction.

The Kodak Pageant Sound Projector has a "Fidelity Control." It is a simple device for focusing the tiny scanning beam with great accuracy so that it can pick up all the high tweets and trills on your sound track. This is necessary because 16mm sound tracks differ—some are projected with the emulsion side facing the sound optics, others, with the base side facing it. If scanning focus is *fixed* and cannot be adjusted, the light beam may be too wide to measure the frantic succession of high-frequency beeps or tones.

At 7000 cycles per second, for example, these variations in the sound track are only .001-inch wide. Yet the Pageant Fidelity Control squeezes its sliver of light through even this minuscule .001-inch gap, and brings all the high-frequency sounds crisp and clear to your ear.

### But how about the woofs?

At the far end of the Pageant sound system you get another plus value. It is the speaker—mounted as it should be in a baffled enclosure. This allows you to hear the low-frequency sounds—woofs and basses that add resonance and body to please the ear.

Without baffling, you'd lose these low tones because they tend to "leak" around the sides of the speaker cone, from front to back and back to front, and cancel each other out. The baffled Pageant enclosure projects these bass sounds out into the room where you can enjoy them.

Ask your Kodak audio-visual dealer to demonstrate Pageant sound for you. Use a film of your own choosing. Compare Pageant sound with the finest 16mm sound you've ever heard. Then select your projector with your ears wide open.

EASTMAN KODAK COMPANY, Dept. 8-V, Rochester 4, N. Y.

Washington, D. C.: Anna L. Hyer was recently named executive secretary of the Department of Audio-Visual Instruction (DAVI) of the National Education Association and as director of the NEA Division of Audio-Visual Instructional Services. She succeeds Floyd E. Brooker in her new positions. Los Angeles, Calif.: Ed Altschuler, former Sales Manager of Berlant-Concertone, is the new Managing Director of the Magnetic Recording Industry Association. He replaces Mark Mooney of *Tape Recording Magazine*, who has handled the job on a part-time basis. Ed's headquarters will be at 6231 Scenic Ave., Los Angeles 28.

## In Memorium

Waldemar Gjerde, Specialist, Audio-Visual Education, Iowa State Teachers College, Cedar Falls, Iowa, died of a heart attack on December 9, 1957. He was 51 years of age.

Dr. Gjerde was president of the Audio-Visual Education Association of Iowa, and a member of the Board of Directors of the Department of Audio-Visual Instruction of the NEA. He served as secretary of the Lake Okoboji Audio-Visual Leadership Conference in both 1955 and 1956 and also served as a consultant on the DAVI Field Service Program since it was first started in 1955. He also served as one of the committee planning the Iowa Audio-Visual Pilot Center Program that resulted in a statewide program of Instructional Materials Workshops.

Dr. Gjerde was a graduate of Augsburg College in Minnesota, and received his Masters Degree from the University of Minnesota and his doctorate from the State University of Iowa.

## Prof. Freeman Brown Dead

Prof. Freeman H. Brown, 59, of 3605 Nakoma Rd., director of the University of Wisconsin Photographic Laboratory, died December 1, after a short illness. Prof. Brown was a pioneer in the development of simple

slide techniques as aids in teaching and was associated with the Wisconsin Extension Division for 26 years.

Prof. Brown studied at the State Teachers College, Oshkosh, and at the Universities of Wisconsin and Minnesota, receiving his bachelor's degree at the latter in 1931.

University Pres. E. B. Fred paid tribute to Dr. Brown's help to "countless faculty members in introducing visual aids into the University curriculum" and for counseling faculty members on the uses of photographic equipment and procedures for the improvement of teaching.

## (1958 Calendar of Events)

- Jan. 22-23—Canadian Film Institute Conference on Films, Unitarian Church, St. Clair Avenue, Toronto.
- Jan. 22-25—NAVA Western Conference, Huntington-Sheraton, Hotel, Pasadena, California.
- Jan. 24-25—Oregon Audio-Visual Association, Oregon State College, Corvallis, Oregon.
- Jan. 27-31—U.S. Dept. of Agriculture Sixth Annual Visual Workshop, Washington, D. C.
- Jan. 31-Feb. 2—Audio-Visual Education Association of California, Asilomar, Calif.
- Feb. 21-22—NAVA Institute Board of Governors, Morrison Hotel, Chicago, Ill.
- Feb. 22-25—American Association of School Administrators, Regional Convention, St. Louis, Mo.
- March 2-6—American Society for Curriculum Development, Olympic Hotel, Seattle, Washington.

# MISGUIDED SCIENTISTS

Since the summer of 1956 we've been hearing of the tremendously important project undertaken by the Physical Science Study Committee. This group of eminent scientists and educators is developing a "streamlined approach to the study of science at the high school level."

The initial emphasis of this Committee has been upon developing new curriculum, methods, and materials for the teaching of physics. Already the first volume of a new physics text has been prepared and is now being used experimentally in high schools. Motion pictures are to be an integral part of this new forward-looking educational program. And right at this point is where we believe these eminent scientists and educators have been woefully misguided.

Between fifty and sixty "movies" on physics are to be produced in the next two years. Where are they to be produced? Hollywood. Who is guiding their production? A top Hollywood director-producer is serving as chief consultant of the film program. Why? Well, the executive director of the Science Committee project is alleged to have said "we hope the films will be more interesting than the usual educational films." Maybe that's the reason the Committee was guided toward Hollywood.

We'd like to ask the Committee a question. DID YOU ASK MICKEY SPILLANE TO WRITE THE NEW PHYSICS TEXTBOOK FOR YOU? He writes more interestingly than the authors of the usual physics textbooks. He knows how to use the written language so it attracts millions of readers. Did you ask him or his like, how to write about physics? Obviously not. These are silly questions, aren't they? But how did you become so misguided when it comes to making motion pictures related to your physics textbooks?

Why do you make your snide comments about the "usual educational film"? Are your opinions of existing educational films based upon scientific evidence?

Have you reviewed all the research that shows pretty clearly that the "usual educational film" is an extremely effective means of teaching people? Who has misguided you into the notions that the laws of physics will be better understood when mouthed by Bill Board's Bumpkins or Uncle Jim's Animal Cousins than when demonstrated and clearly explained by a physics professor presenting the facts straight?

Confusion and fuzziness seem to be inevitable whenever the concepts of entertainment and education get mixed together in the same thinking. Most of the trouble results from a lack of clear understanding of what *interest* is. Granted that before a person can be entertained or before he can learn he must be interested. His attention must be captured and held. But attention and interest in the classroom cannot be captured and held effectively by the irrelevant and distractionary devices used in entertainment. The audio-visual methods that cause serious learners to remember and to think are different from the movie methods that cause the mass audience to laugh and forget.

The executive director of this extremely important science education project is said to have said "the motion picture phase is going to be expensive." We hope he means that these Hollywood produced educational pictures would be expensive only in terms of their cost in dollars. There is greater urgency now for improved methods and materials in the teaching of the physical sciences than in the summer of 1956. The cost of misguided thinking in the production of these direly needed new tools for science teaching may come to be measured in terms of time and effort wasted when there was no time to spare, and when every effort should have counted more.

*Paul C. Reed*

# VIM, VIGOR, VITALITY AND VARIETY IN THE A-V PROGRAM

William B. Hartley

State Teachers College  
Towson, Maryland

THE audio-visual field has long been characterized by men of energy, indeed, no other aspect of the educative process has had more spirited or enthusiastic supporters. They have been willing to tell all who would listen about the wonderful powers encased in their little black boxes. "Causes" and crusades need this vim and vigor to arouse the lethargic and to stimulate the slothful. The cheerleader, evangelist, and the publicist serve a useful purpose in education as well as in other fields. But pure, unadulterated verve is not enough. Leadership, too, is needed.

The advocates of integrated multi-sensory learning, employing modern tools and techniques, have been fortunate in the quality of their national leadership. Dale, Wittich, Kinder, Noel, Hoban, Brooker, Reed, McPherson and dozens of others have made vital contributions to our understanding of the ways in which youngsters learn and the materials and methods for vitalizing the teaching-learning process. The movement has not been nearly so fortunate in the quality of leadership at the local level. This has been especially true at the grass-roots—in P.S. 192, or at Centerville Junior High School, in Zenith High, or in Halfback College. Here the audio-visual coordinator is likely to be a combination drudge, clerk, mechanic, scheduler, expediter, tracer of lost equipment, and part-time-rushed-harried-teacher. How does he get that way? Let us take a typical example.

Sam Serious was an outstanding student at State College. He was inspired by good instructors to make his teaching lively and meaningful. He quickly grasped the meaning of the audio-visual concept and saw the rich possibilities in utilizing the concrete to illuminate and enrich abstract generalizations. In his first teaching job he was the pride of his supervisors and the idol of his classes. Visitors were brought into his room to see the re-

markable way in which shadows on a beaded screen could make the wonders of the world understandable to youngsters. So successfully did he employ a variety of teaching materials that it was but logical that he should be placed in charge of scheduling all materials of an audio-visual nature. To provide time for this important service he was released from his active teaching for one hour each day.

In the days which followed, Sam organized a projection crew, inventoried the school equipment, drew up a work schedule, projector schedules, devised forms for ordering materials, and prepared to serve the school. This preliminary work was fun. It called for organizing ability, creative ingenuity and imagination. It was rewarding also, for Sam valued order and he felt he was contributing to it in his school. As time went by, however, a sense of frustration set in. The clerical work mounted with each day until Sam was being swamped by routine detail. The zip went out of his teaching. Time for vital lesson planning was simply not available, and physical

energy, so necessary for vital endeavor, grew lower with each crowded day. Sam became less and less sure of the value of his service. Now, after a year of this routine, our hero threatens to turn sour. He is even looking at the possibility of a career in the insurance business.

Sam is too good a man to be lost to the teaching profession. The enthusiasm and creativity which he showed in the early days of his career are badly needed by the youth of our nation. How can we save him? What can be done to give him a chance to do a good, efficient, satisfying job? How can we help him to exercise needed leadership on the local level?

First, clerical work should be done by clerks. To be sure, there is a necessary minimum of paper work in every teaching job. Above this minimum teachers should be provided with secretarial help. Even in an underpaid profession such as teaching it makes little sense for trained personnel to be doing routine work which could readily, and probably more efficiently, be carried out by clerks or stenogra-

phers. Let's release Sam for the creative work of which he is so highly capable.

Second, Sam should be given sufficient time during the school day to do a good job of coordination in the audio-visual field. In the school of average size, the coordinator should do some teaching. He should have an opportunity to try out the material, to know the joys of the teacher-pupil relationships, and teaching will help him to keep his pedagogical feet on the ground.

Third, a fair share of the school budget should be allotted for a variety of teaching tools and materials. The future scientists, political leaders, businessmen, and workers should have available the best possible educational environment possible during their formative years. A pupil passes through our schools but once. He should get the very best education possible.

Given the nearest possible approach to an ideal situation, what should Sam do to contribute in a maximum way to the educative process? Here are a few ideas:

should be able to illustrate the principles of utilization which he advocates.

4. The audio-visual coordinator should provide consultation service for his fellow teachers. He can
  - a. Help them to locate materials.
  - b. Give advice concerning utilization problems.
  - c. Assist in class reports and projects.
  - d. Help with construction activities which result in materials uniquely suited to the needs of the group for whom they are intended.
  - e. Maintain a library of audio-visual books, catalogs, and magazines. Circulate articles and pamphlets of interest to teachers.
5. Sam can give his program a lift by proper publicity methods. Some possibilities in this respect are:
  - a. Speak to PTA, service clubs and other groups.
  - b. Issue a local bulletin to his fellow teachers calling their

tical articles are badly needed. There are plenty of college professors writing, but there is a dearth of good articles from the field. Such writing is a real contribution to American education.

8. Sam should look forward and build for the future. He should look forward to the time when every school will own a basic minimum library of films, filmstrips, records, and other teaching materials. He should begin building, even if only in a small way so that the teachers in his school may have the materials they need when they want them.

Such a program as has been outlined should help to make the best use of Sam's vim and vigor. It will also lend vitality to the school's program. Life can be given to the A-V program in certain other ways. When looking for life look to youth. Pupils should be involved in more phases of the teaching-learning process. Too many things are done *to* them to help them learn. More should be done *with* them. The program will be better if it is the pupils' program. Carefully guided by good teachers the class members may do much and do it well. Several examples will help to illustrate this point.

Have you tried having a committee of pupils preview the film, introduce it to the class, set up the purpose for viewing and lead the discussion after the presentation? It works, and it enlivens, enriches, and vitalizes the program greatly.

Another teacher might help the pupils to employ graphic materials in their reports to the class. Charts, graphs, time-lines, models, exhibits, demonstrations and the like can be woven into pupil presentations. Some groups can go further and use films, filmstrips, slides, tape recordings, field trips and many other materials in their reports. Real learning will result.

Involvement of the pupils does not mean relinquishing the teacher's prerogatives. As much skill is needed to help pupils devise a good, meaningful illustration as in teaching facts. Further, learning is more vital, more lasting, if pupils are interested and reacting positively. A pupil who comes to the chalkboard and fills in the missing part of an illustration learns more than if he simply watches the teacher fill it in. The other members of the class learn more too for they react actively to the challenge. A bulletin board is better if it calls upon the pupils to do something than if it is just to be looked at and shrugged

(Continued on page 25)

1. He certainly should work with the projector crew. Here is a real, live, practical learning situation. The youngsters with whom he works can learn valuable, lasting lessons. The close working associations of Sam and his crew furnish an enviable opportunity for a good leader and counselor to be a positive influence on youngsters.
2. The overall planning of systematic distribution is Sam's real job. The better the system, the better the chance for the proper use of materials in individual classrooms.
3. A teacher as good as Sam should give demonstration lessons for other teachers in the school. He

attention to new materials, procedures and ideas.

- c. Furnish news releases to the press and furnish photographs for exhibits, articles, and reports.
6. Someone should have the time and inclination to experiment—try new ways of teaching and report the results. It may be that Sam will do this. Perhaps someone else in the school will have a special interest in this type of activity. The A-V coordinator should be ready and willing to help in such important work.
7. If Sam has ideas, reactions, or a report of a good piece of teaching, he should write it up for an educational journal. Such prac-

# "CONTINUITY OF LIFE" FILM SERIES

## Produced at Indiana University

by Robert Garcia

**MALCOLM FLEMING** — Chief cinematographer for the *Continuity of Life* film series observes some microscopic organisms before photographing them through the phase microscope.

**A** HOLLYWOOD director may have trouble in directing his human six feet tall players, but the producers of the "Continuity of Life" film series at Indiana University had to direct temperamental organisms which were sometimes no bigger than one two-thousandths of an inch.

These four films deal with the basic characteristics of plants and animals, asexual reproduction, meiosis and mitosis, and sexual reproduction. They were produced through the cooperation of the University's Departments of Botany, Bacteriology, Zoology and Audio-Visual Aids.

The heads of these science departments joined forces with Malcolm Fleming of the Visual Aids Department in planning and producing this unique film series.

Most of the filmed footage was produced in the University's Jordan Hall of Biology and in the various laboratories and the greenhouse on the campus itself. All of the outdoor shots were done around the area of Bloomington, Indiana where the University is located.

Many production problems plagued the production staff in the early weeks of planning. First of all, the various specimens had to be studied in order to learn the exact sequence of an organism's activity so it could be photographed during one given phase. But by far the most difficult problem was how to make a given organism react and live normally under the strong heat of the photographic lights. A good example of this problem was found in the yeast budding and mitosis sequences. The yeast which is only about one-tenth of an inch long had to be photographed again and again because it would always die under the strong light. Finally, Mr. Fleming, who was in charge of the cinematography, designed an interrupter light which would flick off and on every few seconds, but which was bright enough for photographic purposes.

In the first film in the series is "The Characteristics of Plants and Animals." Many kinds of microscopic and sub-microscopic plants and animals are used to show basic characteristics com-

mon to all living things.

The one-eighth inch high Hydra is shown in all its eerie glory in its movement, response to stimuli, reproduction, growth and containing of energy. Reproduction is stressed as the process which will forever assure the lasting life cycle. For many students this film will answer the age-old question as to "what is the basic nature of life; where did it start and how does it continue?" This film also shows that all life comes from pre-existing life; that living things have similar characteristics; and that the cell is the center of all living things.

The wonder of color time lapse photography reveals the smallest movement in plants. A rose seed grows, bends and seeks the sunlight above. A Hydra recoils from the touch of a minute platinum needle as a companion plant shrivels and dies from a mere touch of this needle.

In the reproduction and growth sequences of this film, a Hydra is shown as it develops a bud which grows larger and larger until it eventually breaks off and forms a new living Hydra. Flowers are seen producing seeds which grow into new plants keeping up this cycle of life. The process of food making and the manufacture of chlorophyll are more of the film's colorful sequences. Even the most microscopic Algae, only one-tenth of a molecule large, does not escape the camera's detection of life's basic processes even in the world's smallest living things.

The differences between animal and plant cells are stressed by the fact that animal cells have no cell wall, but are surrounded by a plasma membrane that is only one-hundredth of a molecule thick. But when magnified by the camera the membrane resembles the great wall of China. Growth and division of the nucleus is also shown, but is more fully developed in the mitosis film which deals with cell division.

The general purpose of the second film, which deals with "Asexual Reproduction," is to show how reproduction has kept the continuity of life through the ages. By means of various specimens such as the quarter inch long Planaria or flatworm; the hydra;

and the one two-thousandth inch mold-producing Penicillin, the film shows the basic differences between asexual and sexual reproduction.

After the opening sequence, time lapse photography transports the viewer into the world of the sub-microscopic Algae, shown in the process of division. The one twenty-five-hundredth of an inch large bacteria and paramecia are also shown as they jerkily move apart by fission. The Planaria pulls itself into two parts with two separate worms as a result. During this sequence the production crew had a special problem. In using the high power objective of the microscope and focusing down on two or three worms, they had to guess which worm would divide. Since Planaria division is entirely unpredictable, five days were spent in photographing this sequence.

A second type of asexual reproduction treated in this film is that of the microscopic yeast plant which produces a little pink bud as small as one two-hundred-and-fifty-thousandth of an inch. This bud eventually separates from the parent and becomes an adult yeast.

The camera then moves to larger plants and shows how the strawberry plant produces long spidery growths, called runners, which grow from the plant like snakes and take root many feet from the plant itself. This process is also shown by time-lapse photography. The chrysanthemum is shown with its underground creeping stems called rhizomes. A short segment of the film is devoted to artificial propagation as a farmer takes a geranium and places cuttings in the moist soil where they take root and slowly develop into a new plant.

With the use of special laboratory equipment and modified lighting, another type of asexual reproduction is shown. This method is characterized by the formation of special cells called spores. Molds, such as penicillin and Rhizopus, are shown producing spores and the camera catches with painstaking detail the flight of one such minute spore and follows it through its germination and reproduction periods.

The second half of the film shows groups of plants and animals which can produce both sexually and asexually. The yeast plant, for instance, can form spores sexually and also produce buds asexually. The complex Hydra can produce male and female gametes which are small reproductive units found in both male and female sex cells. The film ends as the golden flower Impatiens discloses the difference between asexual and sexual cut-

tings offspring and its sexual seed offspring, which even differ from the parent Impatiens in color and size.

The production of the third film dealing with meiosis and mitosis was by far the most difficult, but the most rewarding of the series.

In one Meiosis sequence which utilized the size changing gene makeup of the common grasshopper, it was found that the common Indiana grasshopper could not stand the harsh photographic lights and therefore often died. So more than 150 of these insects were imported from Florida because they could stand the lamps' heat intensity.

The film opens with submicroscopic sequences showing the behavior of chromosomes during mitosis in the tip of an onion root. The fine threads of the nucleus from which the chromosomes will form are magnified to the point of resembling thick ropes. The process of division is then shown as the threads shorten, thicken and duplicate themselves—each thread being exactly like the others. All of the above scenes were produced in the Hall of Biology's bacteriology laboratory.

Scenes of whitefish embryonic cells show how animal mitosis is essentially similar to plant mitosis. Using time-lapse photography mitosis is shown in the submicroscopic living *Trandescantia's* staminal hair cells. This sequence, one of the most fascinating in the whole series, has never been produced before. It was photographed entirely through a high power phase microscope which speeds up the cell activity about one hundred times, thus enabling a month-long process to be shown in two minutes.

The large vibrating nucleus, the constantly moving chloroplasts and the thickening of the cytoplasm, are clearly shown during prophase.

Meiosis, which has two successive cell divisions, is first shown in the common waterlily and then through an animated sequence which depicts a simplified cell containing four chromosomes during their first and second division. Using time-lapse photography once more, the cells from a grasshopper's testes are used to show the process of meiosis in living material. Again the phase microscope is used to show the never-ending nature of the process as one stage flows into the next. Mitosis and meiosis are then summarized and compared by an animated episode which makes amazingly clear . . . the main divisions difference in the two processes.

The last of the four films deals with the basic nature of "Sexual Reproduction." In this film, a number of speci-

mens are used which students could never see in their school laboratories. The film utilizes the lily, the ascaris, the frog, the salamander, and tropical fighting fish to illustrate this point.

Again, as in the first film which deals with plants and animals, the film shows that although sexual reproduction may differ in certain details in different organisms, its basic feature is the same in all organisms.

The introductory scenes of the film concentrate on the differences between male and female tropical fighting fish and the similarities in the water lily. The idea that sexual reproduction always involves the production and union of gametes is constantly stressed.

The movement of one size changing gamete to another gamete is graphically illustrated by the means of time-lapse photography. Scenes of sexual reproduction in the most basic of all living things, the Paramecium, are shown to explain clumping, conjugation, and an exchange of fusion of nuclei.

Sexual reproduction in flowering plants is shown and is colorfully highlighted by a bursting yellow pollen tube which frees the white sperms.

The finale of the film traces the growth of a salamander from the fusion of male and female to the development of the minute embryo and eventually to the adult stage. The film series then ends as the main idea of the series is stated: "Sexual reproduction makes possible growth variations which has benefited man and has insured the survival of many living things in a varied environment." Thus life will always continue.

The scientists who collaborated on the series were Harold J. Brodie, chairman of the Department of Botany, who was in charge of yeast and plant specimens; Shelby D. Gerking, chairman of the Department of Zoology, animals, grasshopper and Hydra; and Leland S. McClung, chairman of the Department of Bacteriology, mitosis and meiosis.

"The outstanding feature of this series," said Dr. Leland S. McClung, is the large number of specimens used in these films which students cannot see in regular school laboratories." Shelby D. Gerking added—"We have had comments from high schools and other institutions of learning that have used these films which prove they are really slamming home the basic principles of Biology."

*Note: Bob Garcia, a Journalism student at Indiana University, prepared this most interesting report on the Continuity of Life films exclusively for EDUCATIONAL SCREEN.*

# Film Utilization Practices In Seventeen Elementary Schools

## How Are Films Used in the Schools?

by Emilie U. Lepthien

**A**PPROXIMATELY 130,000 reels of film were circulated to Chicago Schools by the Division of Visual Education during the 1955-56 school year. Since film distribution and pick-up is on a weekly basis with each school normally holding films for one week, the figure of 130,000 films cannot, of course, indicate how frequently each film was shown; nor can it, obviously, indicate the way in which the films were used or the number and kinds of students to whom they were shown.

To determine the extent and kind of film use within individual elementary schools, the Division of Visual Education conducted a survey last fall.

### Selecting Schools To Participate in the Survey

The survey took place during a period of three weeks from October 15 to November 2, 1956. In the interest of administrative efficiency, a limited number of schools, all of which had the same film delivery schedule, were asked to take part in the study. A total of seventeen schools in two districts participated.

Although this number represented slightly less than five per cent of the elementary schools in the city, it was considered to be representative of all cultural, economic, and social backgrounds. Included among the seventeen schools were several very large schools, a so-called primary school, a primary-middle grade school which was a branch of another participating school, and several medium- and small-sized schools. These schools were typical of their kind, including the fact that the larger schools had master teachers who had been freed from regular classroom assignments.

The schools chosen showed a wide range of pupil achievement levels and normal variance in faculty. High pupil

and teacher transiency was found in several schools. Many of the students in some schools were new to the city and had entered school with little previous formal education. In other schools the pupil population and the school faculty were relatively stable.

The combined faculties of these seventeen schools represented slightly more than five per cent of the total number of elementary school teachers in the city.

### Film Use Facilities Vary from School to School

Sixteen schools had visual coordinators. In two instances the master teacher was the coordinator. Fourteen coordinators had full-time classroom duties and the time for performing their task as coordinators was necessarily limited.

The facilities and ages of the buildings also varied widely. One school had no window shades in classrooms with a north exposure. A few rooms in the older buildings had no electrical outlets. Other buildings had adequate outlets in all rooms and good conditions for film viewing.

At the time of the survey there were twenty-eight sound motion picture projectors in operation in these schools. The average was, therefore, one projector for each 18.3 teachers, but actual allotments within buildings ranged from one projector for six teachers to one projector for thirty-one teachers.

Initially, the visual coordinator in each school was asked to answer a preliminary questionnaire concerning the total number of teachers in the building, the number of master teachers (since they might not be as likely to use films as would regular classroom teachers), and the number of teachers using films regularly, fre-

quently, occasionally, and not at all.

### How Frequently Do Teachers Use Films?

The answers to the questionnaire revealed that 52 per cent of the teachers used films regularly, 17 per cent frequently, 12 per cent occasionally, and 19 per cent not at all. Of the 99 teachers who did not use films, probably 13 were master teachers, although no provision had been made to determine this in the questionnaire.

The questionnaire also asked the coordinator to indicate how films were selected for viewing, how showings of films were scheduled, and by whom projector equipment was operated. Film selections were made by the entire faculty, including the coordinator, in thirteen schools, by the coordinator alone in two schools, and by a visual education committee in two schools.

Five schools reported using films on a set or master schedule in which the same period was assigned to the teacher throughout the entire semester. Five other schools indicated the use of a set schedule but provided additional time during the week when teachers could request films on a flexible basis. Only seven schools employed a completely flexible schedule. This represented 41 per cent of the schools in the survey.

---

Are the schools using motion pictures effectively? Do practices persist which hearken back to the old Friday afternoon "movie period?" The author, Emilie U. Lepthien, a supervisor of the Division of Visual Education, sought answers to these and other questions in a survey conducted for the Division last fall. This article contains a summary of the survey and some answers to these questions.

---

Nine schools reported that only teachers operated the equipment. One school stated that equipment was operated only by the students. In the remaining schools both teachers and students operated projectors.

## A Report of Film Use Practices

The method of the survey proper was to have the visual coordinator submit a film-use report on each film delivered to the school during the three week survey. Since one school failed to submit such reports, data was secured from only sixteen of the seventeen schools involved. A total of 278 films were circulated to these sixteen schools. Two hundred thirty-one films were actually used. The non-use of 47 films (one out of each six delivered) resulted from equipment failure, the absence of the teacher originally requesting the film, or the fact that the film did not fit any of the units being taught in the school at that particular time.

The 231 films were shown a total of 635 times. This included 11 showings in which a given film was used a second time by the same class.

A total of 962 classes were present for these 635 showings of the 231 films. Four hundred ninety-four, or 77 per cent, of the showings took place with only one class present; eighty-nine, or 12 per cent, with two classes present; and 52, or 9 per cent, with three or more classes present. The mean number of classes present for each showing was 1.51. In only three schools were films limited to one class per showing.

Twenty-eight per cent of the showings involved using only one film at a sitting; in 54 per cent of the cases, two films were shown; in 12 per cent of the cases, three films were shown; in less than one per cent of the cases five films were shown at a sitting. Two schools (a main building and its branch) reported no more than one film used per class period at any time.

## Films Used Heavily At Primary Level

Film use was distributed by grade level as follows: 51 per cent of the showings were to kindergarten-primary classes, 29 per cent to middle grade classes, and 20 per cent to upper grades.

The locations in which films were used were also recorded in the survey. Of the 635 showings, 521, or 82 per cent, took place in classrooms; fifty-nine, or 9 per cent, in special movie rooms; and 55, or 9 per cent in as-

sembly halls. Two schools used the assembly hall exclusively, and one used a movie room exclusively.

During the survey period, the Division of Visual Education circulated an average of .86 films per teacher per four-week period on an all-city basis. During the three-week period, however, three schools of those involved in the survey received at least one and one-half films per teacher (approximately two films per school month), seven more schools equalled or exceeded the city mean, and six schools fell below. The number of film showings per teacher in the schools surveyed in the three-week period ranged from .38 in one school to 2.8.

importance and was used for the following tabulation:

Subject Area	Number of Showings
Arithmetic	16
Art	34
Guidance	39
Health	44
Home Mechanics	3
Language Arts	163
Music	16
Physical Education	5
Safety	17
Science	226
Social Studies	365
No Area Indicated	34
	-----
	635

— Chicago Public School Photo

## Subject Areas in Which Films Are Used

A check of the areas of learning for which teachers used the various films indicated that 37 per cent of the showings were in connection with social studies. Guidance films, which also included citizenship, were not included in this figure. Language arts films, amounting to 17 per cent of the total showings, were used almost entirely in the middle and kindergarten-primary grades.

Where teachers indicated more than one subject area in a film, the first area listed was considered of primary

## Suggested Grade Placement Sometimes Ignored

A total of 962 classes, as was shown above, viewed the films included in this survey. Each film circulated by the Division of Visual Education is listed in the *Catalog of Motion Pictures for Use in Chicago Public Elementary Schools*. Included in the listing is a recommendation as to the grade-level or levels at which the film should properly be used. These recommendations are made by film producers and film reviewers on the basis of vocabulary levels, difficulty of concepts presented, and relation to areas

**Table I.**  
**Grade Level of Viewers and Suggested Grade Placement of Films**

Grade Level of Viewing Class	Films Suggested for Kindergarten-Primary Use	Films Suggested for Middle Grade Use	Films Suggested for Upper Grade Use
Kindergarten-Primary Grades	424*	56	14
Middle Grades	16	176*	79
Upper Grades	5	34	158*

\*These figures indicate number of showings at the appropriate level as suggested by the *Catalog of Motion Pictures for Use in Chicago Public Elementary Schools*.

of study for the various grades.

Table I shows the grade levels at which films were shown and the levels recommended for these films. It becomes apparent that some classes were shown films not suited to the viewers.

Although no conclusive evidence could be presented to state that all of the films shown at appropriate suggested grade levels were used to good educational advantage, at least they tend to fall within the abilities, interests, and study guide suggestions for students of those grades.

It is doubtful if any of the showings of films listed for more advanced groups could have had much educational value for kindergarten-primary students. Although the subject or topic may have seemed appropriate, the vocabulary level and the concepts were probably too difficult for small children.

### The How and Why Of Good Film Use

The survey seems to demonstrate that in many ways films are being used effectively in the schools. A need for improvement, however, is also indicated.

Educators are generally in agreement that the best utilization of educational films takes place in the classroom with one class present and with only one film used in a given period. Also essential are proper preparation and follow-up discussion and activities. To accomplish this a second showing of the film during the same period or at a later date may sometimes be necessary.

Good utilization of films should begin with careful selection by the teacher of film materials which introduce, supplement, augment, or summarize a unit or part of a unit of instruction. The dubious contention that children "will get something out of the movie" regardless of its relation to any topic being studied by them is not borne out by research.

Schools today are confronted with an ever-expanding curriculum. The length of the school day and the school

year remain the same. Research has proved that more learning takes place in less time with greater retention when films are used as a part of instruction than when textbooks alone are used. Research, however, also points out that the films used must be related to the units or topics being studied by the class.

In order to produce maximum benefits, an educational film must be used at a time when the subject it deals with is being studied, not during a so-called "movie" period to which the class and teacher look forward each week as a kind of relaxation and reward for good behavior or for work completed.

### Recommendations To Film Users

The data developed in this survey indicate that, insofar as the schools studied are representative, there is need for improvement, in the way in which educational films are used in the elementary schools. The following are the principles which should be observed by principals, visual coordinators, and teachers in improving the effectiveness of film use:

1. Wherever the physical conditions of the school permit, films should be shown in the classroom, not in an auditorium or other large room.

2. No more than one class should view a film at one time. Even though two or more classes may be at the same grade level and may be considered to be interested in the same topic, it is doubtful whether two teachers present a given body of material in exactly the same way or aim at developing the same concepts at the same time.

3. No more than one film should be used in a class period. Thorough and effective use of a ten-minute film (allowing time for preparation of the class, film showing, and follow-up discussion) requires almost half an hour, with additional time necessary if a re-showing seems desirable.

4. Flexible scheduling of projector and film use is better than a set schedule. Flexible scheduling permits the

use of a film at a time in the day and week when the class has reached a point where a film may be used most profitably.

5. Wherever good utilization warrants additional equipment, the number of teachers per projector should be reduced. Several of the schools participating in the survey did receive additional projectors in January, 1957.

Since few of our teachers were "raised" with visual education, leadership is needed to encourage them in sound practices so that the full benefits of the use of films may be realized.

Finally, teachers must be encouraged to consider the film as a part of instruction and not as entertainment.

## Dry Mount Technique

**Mr. V. R. Nicholas,**  
Coordinator, Meridian School  
700 S. Apperson Way  
Kokomo, Indiana

The following mounting technique will be of interest to teachers who are presently using the dry mounting method for pictures from magazines. We ran out of dry mounting tissue this summer and I had a few more pictures to mount. I learned that the tissue was a paper impregnated with a type of shellac and allowed to dry. I decided to try the shellac on the back of the picture and then put the picture and mounting board into the dry mounting press. It worked. Following is the procedure I used:

1. Trim desired picture to size.
2. Spray back of picture and allow to dry.
3. Respray to be sure all parts are covered.
4. Place picture back down on mounting board and tack as with dry mount tissue.
5. Place in press (270°) for ten seconds.

This is much quicker than all the trimming needed for DMT and also the tacking that must be done is eliminated. We used Krylon plastic spray at the time, but have been experimenting with shellac and gym seal brushed on. We cannot give any definite information at this time since the pictures have not had time to prove themselves as to adhesiveness. (Length of time of adhesive qualities.) I mention this only to try to get someone else interested in this technique, and also hope that someone will contact me concerning their use of this or some other technique.

I hope that this will be of some value.

# The Importance Of The INDEPENDENT EDUCATIONAL FILM PRODUCER

By Albert R. Bailey,  
President Bailey Films, Inc.

**I**NDEPENDENT educational film producers are turning out a constant stream of teaching films; a stream that can be compared in quantity with the hood of material coming from the few larger firms, but its quality is as good or better.

If you are a regular user of educational films, you can probably recognize the names as well as the product of some of the better known independent producers and distributors. Such firms as Academy Films, Arthur Barr, Bailey Films, Inc., Churchill-Wexler, Sid Davis, Pat Dowling, Film Associates, Frith Films, International Film Bureau, Johnson Hunt, and Paul Hoefler supply between ten and twenty percent of the market. There are also many individuals who are making fine films which they distribute directly or through independent organizations.

The ranks of independent producers include individuals, companies, organizations, and corporations — but their most important features are small size and direct personal participation in production and distribution.

In the large educational film companies—the big three, if you will—there are many employees who have special jobs to do and who work routinely through channels. The person who has an idea for a film, or who writes the script, or who is the educational collaborator is often far removed from the photographer, the editor, and the man who contacts educators to sell the film.

In direct contrast is the independent organization in which a few men and women all play a vital part in the writing, photography, editing, and even the selling of the film.

We independents believe that a much more unified production can be achieved in this manner. And more important, we believe that when the collaborator—usually a teacher in the field who realizes the need for a certain film and initiates the idea—can take an actual part in production, the completed film will be of greater help to many more teachers. You'll find that with the independents such terms as production staff, camera crew, and editorial department become simply

"I" or "we." We like it that way, and we produce good films that way.

Educational film users gain many benefits from independent producers, who are often the source for specialized subject area material or for specific regional films. Also, the independent can afford to experiment with new types of films to give viewers new experiences. Some of these experiments amount to little, but others contribute to the progress of the entire audio-visual field.

The independent distributor serves as an outlet for teachers and individuals who produce occasional films. Because of his broad training in all phases of film production and distribution, he can be of great assistance during the creation of the film. He can also offer a distribution program that can be sustained over a period of years. Because the independent works with relatively few film titles, each title is handled individually over a long period, rather than being buried in a catalog after the initial push is over. Distribution channels can also be tailored to fit specific films.

One of the biggest contributions of the independents is their fresh approach and their variety of treatments in film development. Fifty films from one producer in one year bear more

of an assembly line appearance than do 50 films from 20 independent producers. This difference in approach is stimulating to the teachers who use the films. It is also stimulating to the major producers, who are forced to upgrade their productions and revise many of their older films.

Like the custom craftsmen of yesteryear, the independent producers give their time and attention to the small details that make their films outstanding. Their limited production in specialized fields assures motion pictures that fit curriculum requirements.

In all industries today there is a trend toward consolidation, and this is now true of educational films, where the majority of production and distribution is controlled by only three firms. The independents are offering much-needed competition that helps to keep the audio-visual field open-minded to new ideas and new methods in both production and distribution. Certainly this is very important when it directly affects the growing minds of our school children.

Dedication to the needs of teachers and children is the basic contribution of the independents. With your help and your willingness to tell us your needs, we can contribute even more in our role of independent film producers.

# Tomorrow Is Already Here

by Mrs. Olwyn M. O'Connor

Assistant, Audio-Visual Department  
Schenectady Public Schools  
Schenectady, New York

WITH the recent launching of the satellite, we recognize that man is on the threshold of what may prove to be his greatest achievement — the conquest of space. A trip around the world in 90 minutes or a 10 day trip to the moon is now within the realm of probability.

We, as educators, have a responsibility toward these new and somewhat frightening aspects of the modern world. Our role must be a positive one where emphasis is placed on the peaceful applications of such forces as atomic energy and space travel, rather than on the destructive potentials.

Civilization could, obviously be destroyed by recent scientific advances, but we will steadfastly manifest faith in our fellow men to trust that this new knowledge will find constructive applications. This belief in the fundamental good in mankind must be transmitted, nurtured, and strengthened in our children if they are to face fearlessly the realities of a new world.

It is a recognized fact that we fear most that which we do not understand. A basic step then toward fulfillment of our educational responsibility is to challenge each child to develop his understanding of the world within the limitations of his individual capacity.

With perhaps unpardonable bias, we believe the wise use of Audio-Visual materials can span time and space to prepare the child for intelligent participation as a "One World" citizen.

The junior and senior high student can pursue his interest and increase his working knowledge by learning from our films, filmstrips, and other Audio-Visual materials which make basic scientific principles and recent scientific advances unmistakably clear.

We can also build a foundation with

the very young child. The Audio-Visual materials which show the peoples of the world at work and play do much toward developing the child's respect for cultures which vary in detail from his own. The glass house of prejudice might well be erased by emphasizing basic cultural similarities rather than differences.

If teachers everywhere unite to develop in each child a feeling of brotherhood with all other children of the world, we can look forward to a peaceful tomorrow.

## CONSUMER COOPERATIVE ORGANIZATIONS ACTIVE IN INTERNATIONAL FILM FIELD

by Hayes Beall

Co-operative League of the U. S. A.

Interest in film exchange and collaboration led the International Co-operative Alliance, world organization of co-operatives, to convene a working committee in 1953 in London to explore the mutual film interests of consumer cooperative organizations, particularly in western Europe. Inasmuch as there is extensive use of educational films by consumer co-operatives in Norway, Sweden, Finland, Denmark, Germany and Great Britain in film circuits and otherwise, most of the national cooperative organizations in these countries are active in production and distribution. All agreed that an exchange of information would be in their mutual interest. There was at the same time a desire to see whether films produced in other countries might to a greater extent be useful in their own film work. All are engaged both in the showing of films specifically about cooperative ideas and products as well as films with general and entertainment values.

The committee, with which U. S. and Canadian cooperatives collaborate through correspondence, has been convened periodically by the world organization of cooperatives, the International Cooperative Alliance, usually in London. Out of these meetings there developed in 1954 *Cooperative Films*, a 112 page film directory which

lists the films about cooperatives available from cooperative organizations in sixteen countries. This list now has an extensive 1957 supplement. Mr. Maxwell Dunn, UNESCO's chief film promotion officer, attended the 1955 committee session. The 1957 meeting of the film committee was held in Stockholm in July in conjunction with the 20th triennial congress of the 125-million member International Cooperative Alliance.

Mr. K. Sandiford, coordinator, says that cooperative participants in the film committee are endeavoring to keep in mind the following considerations:

1. Possible international use of films should be considered when script is prepared and production planned.
2. Information about films should be circulated internationally.
3. Exchange of films across national boundaries needs to be made more practical for all. The UNESCO Convention has helped wherever ratified.
4. Maintenance by the ICA of a London headquarters film depository — to which all committee participants would contribute at least one print of each new film — is a desirable objective.

Some of the films that have had an extensive use internationally are, "Men of Rochdale" produced by the Co-operative Wholesale Society in England, "In Their Own Hands" produced by Cooperative Forbundet of Sweden, "Pattern of Cooperation" produced by the State Film Committee in Denmark in consultation with co-operatives and, "Land of Ice and Fire" produced by Scandinavian co-operatives to tell the story of the people of Iceland, their cooperative organizations and the beauty of their country. All of these films have been shown in the United States and, with the exception of "Land of Ice and Fire" are currently available from The Cooperative League. Films produced for The Cooperative League of U.S.A. have also had wide international use, including "What Is a Co-op?", "The Goolibah Tree," and "Help Yourself to Ownership."

The gift of 16mm film equipment to the cooperatives of Ghana, including a truck with the generator, auxiliary equipment, trained operator, etc.; the gift of a projector to the cooperatives in Burma; and the expansion of film programs in India, Indonesia, The Philippines, Korea and other countries — and rapidly increasing demand for films about cooperatives — will expand the film program of ICA and member groups.

(Continued from page 17)

off. Any situation which calls for constructive activity on the part of the pupil is to be preferred to a spoon-feeding type of teaching.

Finally, let us consider the factor of variety in the use of audio-visual material. What is the best possible material or device to use in a teaching situation? Is it the motion picture, or television, or the good old reliable projected still picture? The answer is, of course, that no one device is best in every teaching situation. The illustration, device or material should be chosen with the educational goal specifically in mind. Here is where our old friend Sam Serious can function effectively. He can help the teacher to determine which aid will do the best job. He can suggest a new approach which may prove to be stimulating. A history teacher who has been using pictures very effectively may decide to present an interesting character through a phonograph record because it will be new and fresh to the class. A science teacher may decide to use a film to show an experiment because the school lacks the equipment to carry it out before the class. The whole school may decide to look on a television program because it shows an actual event as it occurs. Variety is the spice of the educative process, but it must be meaningful, well-chosen variety.

Vim, vigor, vitality and variety in teaching will supplement but never replace common sense, sensitivity to pupil needs, and scholarship. The teacher, audio-visual coordinator and school administrator need all of these characteristics. With them Sam Serious can fulfill the dreams of his undergraduate days. With them all of us can make a real dent in the problems facing our nation today.

# How To Drive on Snow and Ice

For the first time in the long history of driver education, the nation's 10,000 or more high school classes in this subject will have access to the "know-how" of driving on snow and ice, by way of a unique new course of instruction produced and sponsored by the Seiberling Rubber Company and approved by the National Safety Council.

The course consists of a teacher's manual, certain visual aids which are described

Fastened on the face of the board is a series of "roads" upon which toy cars may be placed to represent distance traveled in skidding or stopping, when driving on ice. The "stars" are Anita Fursey and Wayne Clark of Burlington High.

Burlington High School students demonstrate how to get yourself out of a snow-bank with a minimum of frustration and wear and tear on the car. First use a shovel, then using sand you will be able to "rock and roll" your way clear.

therein, and a 13-minute movie called: "How To Drive on Snow and Ice." The movie is unusual in that it was made with the cooperation of the driver education class and instructors at Burlington High School, Burlington, Vt.

To develop a "true-to-life" movie and how-to-do-it teacher's manual on winter driving, experts picked a typical class of high school driver trainees in snowbound Burlington, Vt. The film that resulted finds students and teachers cast as leading characters. A 40-page illustrated course of study to be offered as an adjunct to the movie was another product of the effort. It is a digest of "facts and techniques" obtained on the scene from observing

a snow-country class learning-by-doing. Much content was gleaned also from the National Safety Council and the Association of Casualty and Surety Companies.

With students and teachers alternating behind the wheel of dual-control training cars on frozen Lake Champlain and snow-laden roads at the foothills of Mount Mansfield, the movie dramatizes the major points of instruction covered in the teacher's manual. The manual also contains a number of "do's and don'ts" illustrations from the movie and suggestions for classroom demonstrations on winter driving techniques before the student advances to the practice-driving phase of the program.

Both the teacher's manual and the film are offered free of charge to schools requesting same. The film is available on a loan basis or it may be purchased outright by the school for \$35 per print. Requests should be addressed directly to: Public Relations Dept., Seiberling Rubber Company, Akron 9, Ohio.

## Special Church Section in February

The February issue of **EDSCREEN & AVGUIDE** will include an enlarged church section, with articles and reviews of special interest to church users of audio-visuals. The issue will also include the regular features of interest to all audio-visual users in school, church, and community.

# Evaluation of new films

portant industries in Alaska, such as gold mining, water power, and rail transportation are briefly depicted and discussed. Farming scenes in the fertile Matanuska Valley are not too different from activities in the northern part of the United States.

The reporter concludes that this is the story of Alaska, as he sees it, and the viewers are again reading unnoticed over his shoulder as the film ends.

## LETTER FROM ALASKA

(Northern Films, 1947 14th Avenue, North, Seattle 2, Washington) 20 minutes, 16mm, sound, color, 1957. \$175. Teacher's guide available.

### Description

The story unfolds as a reporter on a large newspaper is writing a letter to his young friend, Johnny, about Alaska. His voice continues the narration of the letter as the scene shifts from his office to the Alcan Highway that he is describing.

The route of the Alcan is traced across an animated map. Views of magnificent scenery along the Alcan show that the country is locked in the clutches of winter. People are dressed for its embrace, and the season does not slow normal activities.

The camera cuts to crowds on a street of Anchorage watching dog-sled races at the winter carnival. Eskimos perform interesting ritual dances at the carnival. A rapid camera transition to new school buildings built to accommodate the large increase in population since World War II points out that most newcomers are connected with national defense efforts. Alaska is much like "back home" new people feel; emphasis is pictorially given to Alaska's typical American countenance. People are facing typical pioneer challenges in establishing new homes in a frontier-type atmosphere.

The action switches to Aniak. Eskimo women are deftly cleaning and dry-

ing salmon, a staple food, along the river bank. As the film reveals the depressing shacks that house the Eskimos, narration explains that there are not enough steady jobs to go around. Some sturdy Eskimo men emerge from the tin mine which is the only one in North America, but there are not enough mining jobs for all.

An animated map traces the discovery and settlement of Alaska by Russians in 1741. Russian churches are relics of this area. American prospectors searching for gold were confronted by some of the most rugged mountains in the world when they came to Alaska later. Aerial views picture mountains and glacier land. The camera records rivers of ice created by winter snows, and the narrator explains the formations of moraines and nunataks. The scene continues until the glaciers end at the sea where they shudderingly break into icebergs.

The Alaskan peninsula is volcanic. In 1912, the Katmai Valley was lushly green, then it was smothered by an eruption. It is now called "the valley of 10,000 smokes." The wide sweeps of Alaskan tundra country have great rivers. The film shows that grizzly bear, caribou, moose and other game are much in evidence here and throughout the country.

A series of scenes follow showing how Ketchikan turned to the lumber industry to rebuild its community prosperity after unwise salmon fishing had brought depression to the erstwhile "Salmon Capital of the World." Im-

### Appraisal

LETTER FROM ALASKA gives an introduction to contemporary Alaska, and attempts to answer many general and specific questions concerning Alaska and its people. The teacher using this film will find that the photography and color are good, that the animated maps, aerial views, and action shots give the child an unusual perspective of Alaska. The primary audience would probably be the upper-elementary grades or junior-high school students who are interested in physical, economic, and human geography of Alaska. For maximum value from the film, the student should be familiar with such terms as topography, moraine, nunatak, tundra, and glacier. He should also be aware of the locations of Anchorage, Nome, Aniak, Ketchikan, Matanuska Valley, Mt. McKinley, and the Katmai area. The film will give excellent reinforcement to the meaning of these terms and to the importance of the areas mentioned.

— Wayne K. Howell

## PERSON-TO-PERSON COMMUNICATION

(University of Southern California, 3518 University Avenue, Los Angeles 7, California) 14 minutes, 16mm, sound, black and white or color, 1956. \$100 or \$200. Produced by McMurry-Gold Productions in association with Dr. Nicholas Rose.

### Description

A telephone call to Mr. Lewis, the plant manager, about difficulties in completing the payroll interrupts a

THE FINEST CLASSROOM FILMS ARE MADE BY CHURCHILL-WEXLER FILM PRODUCTIONS

conversation with Bob Wheeler, a shipping department employee with ten years' service. Bob had come in to request an advance in his vacation dates so he might go immediately to a distant city to help settle his late brother's estate. Fifteen minutes later Bob, his request denied, quits his job and Lewis begins his search for a replacement.

This conversation, which had started with a pleasant exchange on the day's events in Bob's department, was not helped by the interruption from the telephone call. The real cause of the rapid deterioration in relations between Mr. Lewis and Bob Wheeler was the natural but unfortunate tendency of each to let his own thoughts and feelings block out what the other was saying. This is demonstrated in an analysis not only of what the men said to each other but also what they really thought as they spoke, the latter represented by off-stage voices. To Bob's face, Lewis explains that the absence of another shipping department employee at the moment makes granting his request very inconvenient. But as pointed out by the narrator, Lewis really has the feeling that no matter how long men like Bob work for a company they can think only of themselves. Meanwhile Bob, trying to put into words the urgency of his getting away now, is really involved in making himself believe that Mr. Lewis doesn't want to understand the seriousness of his situation. As spoken words become sharper, the manager promises himself that before Bob leaves the office he'll understand that the company doesn't play favorites for him or any other employee. By this time Bob begins to suspect that the manager considers a man with ten years' service easy to replace so decides to give the boss just one more chance to grant his request. When the manager finally says "No", his employee has no alternative but to quit.

It at this point in the film that the narrator suggests that one's assumptions, viewpoints and feelings prevent him from hearing more than just words when listening, thereby bringing about rigid and inflexible situations such as the one just described. So he invites the viewer to listen in again as Mr. Lewis and Bob Wheeler talk over the same problem, with their private actions revealed as before by off-stage voices. There is at the outset the same pleasant exchange about the day's developments in shipping as heard before. Now, however, immediately upon learning the purpose of Bob's visit, the boss instructs the operator to hold all calls. In his own

mind he recognizes that an advance of vacation dates, while difficult to arrange, is his problem as manager. He recalls, too, the demands that were made upon him a few years ago when bereavement came to his brother. Giving Mr. Lewis time to mull over the problem, Bob tells himself that it isn't easy to find relief on short notice for an employee of ten years' experience. Thinking to test the genuineness of Bob's interest in the company as well as wanting to help his employee, Lewis suggests that Wheeler try to work out an exchange of dates with another department employee. Bob readily agrees and so the conversation ends on a friendly and reassuring note, and all within seven minutes of its beginning.

Not only a job but time and nerves as well were saved because both men remembered that person-to-person communication can be only as good as is their ability to listen with understanding.

### Appraisal

This film, though done in an industrial setting, is applicable to more than employer-employee relationships. Its simplicity and directness should make it appealing for many concerned with peer and pupil-teacher relationships, even at the junior-high-school level and in a variety of situations. In upper-secondary, college and adult groups, there should be questions about the nature and background of the aggres-

**BAILEY FILMS, INC. • 6509 DE LONGPRE • HOLLYWOOD 28**

the East-West division of the country, and the narrator explains that three-fourths of Germany's people and most of her larger cities are in the Western zone.

In the South where the old ways are least changed, a lake dwellers' village and the sign "Neanderthal" recall to mind that here was found one of man's most ancient habitats. The crumbling remnants of an ancient wall are mute reminders of Roman occupation many centuries ago. Now, however, the region echoes to the sounds of the woodsman's axe, tinkling cowbells on verdant Alpine slopes, the winegrower's casual whistle, the whirr of the farmer's hand-held mower, and a fraulein's carefree song while helping shock the wheat.

It is discovered that here in the rural uplands, the big, heavily ornamented ancestral houses shelter not only father, son, and grandfather, but livestock and storage bins of food against the long seige of winter's cold and snow. The long evenings and the season's quieter times find many farm and village folk engaged in handicrafts — making porcelain figurines, knickknacks, dishes, and even violins. The quality of their artistry is portrayed as comparable to that of the full-time town and city craftsmen. It is pointed out that from the old crafts have grown newer and more modern industries. The city of Nuremberg, a world center of toy making, exhibits some popular examples of her wares. In Oberkochen skilled workers are turning out internationally renowned camera lenses and other optical instruments.

The plains region of the north is now shown on the map, and the broad, flat fields and modern machines of the farmers are seen in contrast to those of the upland south. There are seeming shades of contrast seen within a single farm where tractor and combine harvest wheat; the hands of women refugees take potatoes from the ground, and a girl is shepherd to the pigs.

Following re-orientation on the map, the world famous Ruhr, Rhine-Westphalia district is described. The narration emphasizes the importance of the area, the richness of its mineral deposits, and the range and significance of its products. The scenes disclose the merchandise of her factories, mills, and foundries: locomotives, automobiles, trucks, and raw steel.

A picture of prosperity and general well-being is drawn as the family of mill worker Heinrich Brandt is intimately observed. Although the signs of peace and prosperity are many, other scenes reveal a different picture. The red flags of communism flying

sive tendencies seen in the film. Such tendencies are not always so easily sublimated, even when the advantages of cooperation are quite evident to the parties involved. Nevertheless, the film will be immediately useful to the many people who too frequently fail to consider the other fellow's viewpoint but who want to function more effectively in life's simpler relationships. More specifically, it should prove helpful to teacher education specialists in illustrating the phenomenon of communication, a matter of increasing concern to those interested in the learning process.

— Kenneth B. Thurston

**GERMANY, PEOPLE OF THE INDUSTRIAL WEST**

(Encyclopaedia Britannica Films, 1150 Wilmette Avenue, Wilmette, Illinois) 16 minutes, sound, black and white, color, 1957. \$75 or \$150. Teacher's guide available.

**Description**

Traveling the length and breadth of Western Europe's largest country in only a few minutes is the experience provided by GERMANY, PEOPLE OF THE INDUSTRIAL WEST. Boats and barges on the Rhine; quaint old castles and fortresses looking down; the snow-clad mountains of Bavaria, and the northern plains; land and animals, and machines and factories yielding reluctantly to determined men, are the film. Belching smokestacks, a speeding freight, steaming river craft, and glowing ingots of steel testify to the industrial activity along the River Rhine. The river is seen as an important carrier of imports and exports vital to the economic health of Germany and other European countries.

Orientation is provided by a map of Europe. Using animation, the course of the Rhine is traced, the nations and regions served by it are shown, and the major German cities along its route are pointed out. The map also shows

orchard lake, mich.

over the Eastern zone, the armed guards, and road blocks between East and West are seen as constant and painful reminders that the nation is conquered and divided. Rubble and ruins in many industrial cities remain, suggesting monuments to despotic militarism and shameless bigotry.

The film stresses the concern and uneasiness of all Germans over the problem of a divided country. The posture of the nation is perhaps best described by one of the scenes in which East meets West in Berlin. Pictured is a young couple, standing bewildered, facing the dead end of a former thoroughfare. It is not accidental, however, that over the final scene of "life as usual" a rainbow arcs the sky.

#### Appraisal

By the nature of its treatment, this film is adaptable to a wide range of educational interests and uses. Upper-elementary teachers of geography, and high school teachers of world history and international problems will find in it an abundance of pertinent information—some obvious; some subtle and half concealed. The film should provide a rich background of appreciation and understanding for German language classes at the high school or college level, and adult groups.

—Preston Mitchell

## THE CONSTITUTION AND EMPLOYMENT STANDARDS

(National Educational Television Film Service, Audio-Visual Center, Indiana University, Bloomington, Indiana) 28 minutes, 16mm, sound, black and white, 1957. \$125. Produced by Center for Mass Communication of Columbia University Press, New York, New York, for the Educational Television and Radio Center, Ann Arbor, Michigan.

#### DESCRIPTION

By tracing the history of the case of the United States versus Darby Lumber Company, the film reveals the ways in which the Constitution derives its significance for the American citizen.

The beginning of the case is shown to have occurred in 1939 when two investigators of the U. S. Department of Labor, Wage and Hour Division arrive at the lumber company of Fred Darby in Statesboro, Georgia. They request the books of the company on wages and time in order to determine the possibility of violations of the 1938 Fair Labor Standards Act. With Mr. Darby's full cooperation, the investigators proceed with employee interviews and a two-day study of the

records of the company.

A few months later, when Mr. Darby notices that some of his employees are under continued investigation, he consults his lawyers. They suggest that they can argue that the 1938 act is "unconstitutional" and cite similar cases in 1918 and 1923 where the Supreme Court decisions found wages not to be the business of the federal government.

After further investigation by government representatives, subpoenas are served Mr. Darby and his employees for appearances before a grand jury on charges involving wages, overtime, and records. His attorneys, in turn, file a demurrer claiming infringement of Mr. Darby's constitutional rights. The ensuing decision by the United States District Court judge rules the Fair Labor Standards Act "unconstitutional" if Congress expected that the regulations of the act be a proper application of the "interstate commerce clause" of the Constitution. This decision was appealed to the Supreme Court in December of 1940.

The film then points up the significance of this law and the judicial proceedings of the case. First, Congress is most concerned with the litigation since previous similar laws were de-

clared "unconstitutional." Secondly, the Supreme Court is seen as the final arbiter unaffected by popular or governmental pressures to determine the "intent" of the founding fathers as made manifest in the Constitution. Thirdly, radical changes are occurring in the social and economic structure of American society as mass industry gradually replaces agriculture. These changes, in turn, bring popular demand for congressional laws to bolster the individual's bargaining power in the labor market.

In the course of litigation in this area, three provisions of the Constitution receive repeated attention: the "interstate commerce" clause; the Tenth Amendment, known as "states' rights"; and the Fifth Amendment preventing the deprivation of life, liberty, and property "without due process" of law. Previous decisions by the Supreme Court involving the "constitutionality" of laws usually were founded upon one of these three provisions. With the coming of the depression, however, pressure upon Congress increases and past dissenting opinions by Supreme Court judges gradually become the majority opinion during a series of decisions in the 1930's. The act of 1938 by Congress is founded on the hope that a shift in the opinion of the Court regarding the interpretations of the Constitution is taking place. The case of the United States versus Darby Lumber Company is regarded more as determining the legality of a law rather than the guilt or innocence of the company. The Supreme Court in its "decision" upholds the law as coming under a broader interpretation of the "interstate commerce" clause. Specifically, all producers of goods in interstate commerce as well as suppliers of those producers would now have to observe the provisions of the law. The original indictment against Darby is reinstated not for paying "below minimum wages" but for violating other provisions of the act.

Concluding observations in the film emphasize the operation of checks and balances and suggest that the final act lies not in Congress or in the White House, but in a law suit involving the constitutionality of a law.

### APPRAISAL

The previewing committee saw in this film a sincere effort in portraying the significant and essential relationships between the American Constitution, the legislature, the judiciary, and the citizens. Taking what are usually regarded as highly abstract notions in the areas of law and constitutional rights, the film discusses these with remarkable clarity in terms of the con-

crete affairs and experiences in the daily lives of citizens whose rights the Constitution is designed to establish and preserve. The film bridges the gap between that level of political activity dealing with the passage and enforcement of laws and that involving their constitutionality as determined by the courts.

The presence in the film of Mr. Darby himself, his attorneys, and Attorney General Biddle, along with location shots of the lumber company in operation infuse the treatment with that authenticity which invariably characterizes sincere attempts of men to come to grips with their world. Historic trends, evolving social, political, and economic patterns within the society as well as immediate work-a-day concerns of individual citizens are all interrelated to clarify the basic issue that emerges when laws, seeking to change prevailing practices in given areas of human endeavor, are challenged as to their constitutionality.

High school social studies, classes, university classes in government along with adult groups in special programs of education would find here the conflict of adventure combined with a lucid, analytical, and informative treatment of an important facet of American government.

## WHY FOODS SPOIL (MOLDS - YEASTS - BACTERIA)

(Encyclopaedia Britannica Films, 1150 Wilmette Avenue, Wilmette, Illinois) 14 minutes, 16mm, sound, color or black and white, 1957. \$125 or \$62.50. Teacher's guide available.

### DESCRIPTION

This film shows the causes of food spoilage and demonstrates why and how foods can be preserved.

It opens by picturing a pioneer family and telling that their methods of food preservation, e.g., storage in a cold place, were discovered accidentally. Only recently have the causes of food spoilage been attributed to molds, yeasts, and bacteria.

The film continues by showing the necessary conditions for the growth of bread mold and tells of the food spoilage caused by these tiny plants. However, it goes on to show that molds are also beneficial as, for example, when used in cheese making. It tells that there are many different kinds of molds and pictures several of them.

It is usually easy to see mold on foods but yeasts, which also spoil food, cannot be detected as readily. The film pictures orange juice which is being spoiled and, on closer inspection, bubbles of gas can be seen rising

from the orange pulp in the bottom of the glass. By cinephotomicrography, WHY FOODS SPOIL pictures budding yeast plants and tells that they release carbon dioxide when feeding on sugar and water. Like molds, yeast plants are also useful, for example, their release of gas causes bread dough to rise making the baked loaves fluffy and light.

The third kind of plant that causes food to spoil is the smallest of all. They are called bacteria. By photomicrography, the three groups of bacteria are shown; viz, round, rod-shaped, and chain-like. After demonstrating the minuteness of bacteria, the film tells that although they cause many foods to spoil including the souring of milk, bacteria are also useful. It shows the bacterial colonies that grow after finger tips have been pressed in a "special jelly" and further emphasizes the importance of frequent washing of hands.

Next the film presents methods for food preservation. It demonstrates by experiments that drying, freezing, or heating plants will retard their growth or kill them. The difference in growth between a pea seed planted in dry soil and one planted in moist soil is shown. Also, the film demonstrates the wilting of an overly heated plant and the growth retardation of a plant that is cooled. Thus refrigeration, canning, pasteurization, quick freezing, and dehydration are some of the effective methods of food preservation. In addition, special light rays are used to kill the plants that cause food to spoil. The summary reviews and relates the concepts covered by the film.

#### APPRAISAL

This film is a clear, interesting, and convincing presentation of facts concerning these three fungus plants and the methods used for controlling their growth. Not only does the film show some of the common methods of preservation but, also, demonstrates why these methods are effective. It shows, for example, the effects of heat, cold, and dryness on easily seen, common plants and explains that the effects on the minute plants are similar. Also commendable is the presentation of the beneficial aspects of these plants as well as the detrimental since many students otherwise may see them as being only obnoxious and useless. Because of the level of the terminology, content, and presentation this film would probably be most useful in the intermediate and junior-high grades. (The film, for example, refers to the "roots" of mold plants rather than "rhizoids." It does not use the word "agar" but "special jelly.") Although its primary use is in the areas of bio-

logical science and health it probably will have application in the social studies as well. The photography is good except for the definition loss in the high magnification photomicrography of the three kinds of bacteria. Undoubtedly, many elementary and junior high teachers will find WHY FOODS SPOIL a welcome addition to their list of teaching materials.

—George Vuke

### Film makes friends for foreign pupils

The day before Christmas vacation was an exciting one for the children of McKinley School in Cicero, Illinois, for a special Christmas program was the highlight of the day. Among the children present were Hans Liebmann, a new arrival from Germany, Janie Young, a little girl from Hong Kong, China and her older brother, Liang. Hans and Janie were in Mrs. Semner's kindergarten class. Because neither of the children spoke English, they were having difficulty in understanding the other boys and girls.

The program included a film, "Christmas Customs Near and Far,"\* narrated by Fran Allison. The story shows customs in different parts of

the world: Sweden, Germany, Mexico, China and other countries.

At first, Hans was not very interested. Then a Christmas scene in Germany flashed on the screen. Hans sat up suddenly. "Kris Kind," he shouted; then, "Das Ist Lebkuchen," when the children in the film ate their special Christmas cookies. Others in the class, observing Hans's display of emotion, immediately recognized what was going on.

Janie's reaction was different. When Christmas scenes from China were shown, she leaned toward her older brother, Liang, and began an excited conversation in Chinese to which Liang responded in turn.

After the film was over, Mrs. Plambeck, Liang's second grade teacher, asked if there were any questions on it. One of the questions pertained to Christmas in China. "Perhaps Liang can answer the question," said Mrs. Plambeck. Liang could and proudly did. The children listened with rapt attention as he talked about life in Hong Kong.

And so the point was made that, even though the ways of celebrating Christmas are different, the purpose of Christmas is the same throughout the world.

# SOUND advice

about audio materials  
and equipment

by **MAX U. BILDERSEE**

Ten years has seen considerable change and growth in the record industry. Ten years ago all recordings were published at one speed—78 revolutions per minute. You will recall the older, brittle shellac recordings which played, albeit noisily, for about three minutes and which were like a well known coffee, 'good to the last drop.'

There have been major changes in the industry in regard to the type of record sold. Ten years ago so-called children's records accounted for almost one quarter of the records sold. Popular records—the 'hit tunes' from theatre and motion pictures for the most part—were the industry's backbone. Many people listened to classical music from records, but such recordings were in the prestige class and were hardly self-supporting. There were many who predicted the early end of the recording industry with the advent of television. "Record Retailing Yearbook" for 1948 listed a few more than three hundred record producers.

Entering 1958 we know there are more than four hundred producers, and several of them are specializing in educational records—records intended for classroom instructional purposes. Classical music records have become the backbone of the industry and are collected by many thousands of "hi-fi" fans throughout the country. Popular records are still important to the industry, but children's recordings have fallen off in importance and no longer can they be considered essential to the industry. In fact, they are a poor third in the chase for importance.

Of course, the first major change was the development of the micro-groove recording. Both RCA-Victor and Columbia explored this area, and from their efforts came forward the 45 rpm record, the extended play 45 rpm disc, and the familiar 33.3 rpm long playing record which we all use. These developments lowered the cost of records, increased record purchases, and gave new birth to the industry. Without them it is safe to venture the opinion that the recording industry would have been television's first victim.

The recording industry has passed

through a ten year cycle of rebirth and reorientation to the interests of the consuming public. The advent of tape recording has yet to be fully felt, but in time it will be important in the industry's sales picture. In time schools will use far more tapes than they do today, and they will purchase pre-recorded tapes for many purposes. And to that end there are at least two producers who are looking to the school field for important and increasing percentages of their sales.

Not too many years ago textbook publishers looked askance at phonograph records—indeed at the entire audio-visual field. Today that situation is changing, and major publishers of textbooks are entering into the audio-visual field and in some instances are publishing recordings, films and filmstrips designed to accompany particular texts in a complete instruction package. The trend is definitely in the direction of expansion of this area of instruction.

But with the shrinking market for children's records, the product is also shrinking. Some leading producers have quit the field and others are severely limiting production. But occasionally we can report in this area on records old and new that are at hand. Children on both sides of the ocean have enjoyed the "Babar" stories and they are well told, by Frank Luther on the recording "THE TAVELS OF BABAR" (Decca Records, New York; K-60). These engaging little tales were developed by a young French artist for the pleasure and satisfaction of his own children. Published with illustrations by the author they became tremendously popular and were even portrayed on the French stage. The particular recording we heard has been evolved from the plots and situations of three Babar books, "The Story of Babar," "The Travels of Babar," and "Babar the King." This recording will delight the youngest children in school.

Two other Frank Luther recordings merit your consideration for the youngest children in school. They are "WHATTA YA WANNA BE (When you grow up?)" (Decca Records, New York; K-6) and "SONGS FROM 'NOW WE ARE SIX'" (Decca Rec-

ords, New York, K-49). The former can be used effectively to motivate discussion on two prime interests in the classroom, the first being "what MY DADDY does," and the second being "I'm gonna be . . . a fireman . . . a policeman . . . an engineer . . . a nurse . . . a teacher." The reverse side of this recording, "LADDLE LADDLE LADDLE ON A LOLLYPOP" will have little school appeal.

Children love the A. A. Milne songs, and they will enjoy hearing and repeating the poems sung by Frank Luther on this record. These include "Binker," "The Emperor's Rhyme," "The Engineer" and "The Friend." This recording can be used for pleasure listening in the classrooms and contribute to the learning experience and appreciations of the newest school children.

Frank Luther has been called, and appropriately, the "Bing Crosby of the sand-pile set" because he is readily accepted by the children as "one of them." He does not sing down or in any sense condescend to perform for them, but obviously enjoys doing this work and in so doing exhibits his deep and abiding affection for children — all children. He understands them, talks with them in their language and on their level. Because he believes that a child's natural state is happiness Frank Luther, through his records, attempts to encourage and develop that attitude.

Paul Wing has done much the same thing for children through his storytelling recordings published by RCA-Victor. One, on which we reported many years ago, still ranks as a favorite of ours. It is "THE ELEPHANT'S CHILD" which was originally published under the "Bluebird" label. He has two delightful sides, "TOM THUMB" and "PUSS IN BOOTS" (RCA-Victor, Camden, New Jersey; WBY-44) which first, second and third graders will enjoy hearing. This is listening for pleasure and can be a wholesome activity in the elementary school classroom.

Sterling Holloway has developed a story telling technique which appeals to children, and his "LAMBERT THE SHEEPISH LION" (Decca Records, New York; K-63) can serve similar purposes. Of course this is a rather ridiculous little tale which appeals to the unsophisticated humor of the younger set. The story is from a Walt Disney production and is most competently told. Children can and will conjure up their own imaginative visualization to accompany the story and profit thereby. This listening experience can be used to motivate artistic self-expression in paints, crayons and other media in the lower grades.

Two recordings which do not appeal to us for school use are "HANSEL AND GRETEL" (RCA-Victor, Camden, New Jersey; BY 14) and "THE LITTLE ENGINE THAT COULD"

(Decca Records, New York; K-57). Both of these are intended for children, and each could be better done. The "Hansel and Gretel" (told by Jane Pickens) lacks the sincerity of presentation so essential in a child's listening experience. The story of "The Little Engine That Could" has been abridged to a three minute performance and is presented by Guy Lombardo and his Royal Canadians in the typical Lombardo style. The reverse is also a Lombardo recording title "Let's Have A Party."

"THE ERIE CANAL" (Enrichment Materials, New York; ERL 114) is adapted from the Landmark Book of the same title written by Samuel Hopkins Adams. This is an excellent performance telling not only the trials and tribulations but also the success of the construction of the Erie Canal more than a hundred years ago. The story is told from the request for funds from the New York State Legislature and the turning of the first spade-full of earth at Rome to the completion of this gigantic venture and the blending of fresh water from the Great Lakes with the salt water of New York harbor. The economic importance of this canal is indicated throughout the record which was designed for sixth-seventh and eighth graders. They will enjoy and profit from hearing this as well as the story of "THE FIRST OVERLAND MAIL" which is contained in the same recording.

Here are some ways you can use tape to make your science teaching more exciting and alive.

- Let a student amateur radio operator tape the "beeps" from Sputnik or other satellite. Let him also tape the regular code of short wave radio, to offer as contrast.
- Let different groups in the class create, and record, dramatizations of the discoveries of famous scientists.
- Tape a talk from a scientist; arrange a taping of a radio or TV program which was broadcast during class hours.
- Common sounds can be taped and played back for the class to identify the scientific laws illustrated — approaching and passing train whistle; Doppler effect, etc.
- Tape the sounds of nature — birds, animals and insects.
- Build a library of taped experiments. Have a gifted group in your class do an experiment together. Let them record their procedure and conclusion. This can serve as a model and instructor for another group to perform the same experiment. Other groups can tape other experiments. Tapes can be exchanged among groups.

The sound quality of a tape recording can be no better than the quality of the tape on which it is recorded. Educators' critical requirements for fidelity of reproduction and consistent quality are easily met by *any* of the seven types of Audiotape. This complete line of professional quality recording tape offers the right recording time and the right tape cost for any application. But, regardless of type, there's only *one* Audiotape quality—the finest that can be produced. For more information write Audio Devices, Box EV.

**audiotape** *it speaks for itself*  
TRADE MARK  
 AUDIO DEVICES, INC., 444 Madison Ave., New York 22, N.Y.

The latter recording tells of the struggle to develop the first trans-continental stage route. The listener joins the pioneers who set out to establish stations across the plains and thrills to the ride in the first stage westward from the Mississippi River to San Francisco as he encounters poor roads, Indian raids, stolen horses and runaway mules in the twenty-three day journey.

Mentor Records (New York) is a newcomer to the audio field and their first offering, "DON QUIXOTE" (Mentor Records, New York; Series 12-A-1) is truly excellent and can be freely recommended for colleges, for

secondary schools and for libraries. School will find these recordings useful in motivating the reading of "Don Quixote" while colleges and libraries can use this recording in a variety of ways. Certainly it can be employed for informal "readings." The record is read by Walter Starkie directly from his own translation of Cervantes' classic work. It can be used, too, for assigned listening by college instructors. The flavor and passions of the sixteenth century are effectively portrayed. The recording is worthy of several rehearsals and should be popular with mature listeners.

Walter Starkie is noted for his

geniality, ebullience and wit. He was for more than twenty years a professor at Dublin University and for fifteen years served as Director of the British Institute in Madrid. He is a noted authority on Spanish history and culture, a scholar, a noted writer and an eminent lecturer. On the recording at hand he reads, brilliantly, from such parts of Cervantes' novel as "Don Quixote and Sancho Panza," "The Windmills," "The Goatherds and the Golden Age," "The Inn," "Sancho Panza and His Wife Teresa," "The Knight of the White Moon" and several others including "Don Quixote's Last Days."

## HELPFUL BOOKS

**AUDIO-VISUAL METHODS IN TEACHING: REVISED AND ENLARGED.** By Edgor Dale. 544 pp. Illustrated; and with 49 full-color plates. The Dryden Press, 110 West 57th St., New York 19, N. Y. 1954. \$6.25.

**THE AUDIO-VISUAL EQUIPMENT MANUAL.** By James D. Finn. Published under the general editorship of Edgor Dale. 384 pp. 1400 illustrations. The Dryden Press, 110 West 57th St., New York 19, N. Y. 1957. \$9.50.

**AUDIO-VISUAL MATERIALS: THEIR NATURE AND USE.** Revised Edition. By Walter Arno Wittich and Charles F. Schuller. 570 pp. 249 Illustrations, 14 Color Plates. Harper & Brothers, 49 E. 33rd St., New York 16, N.Y. 1957. \$6.50.

**MANUAL OF AUDIO-VISUAL TECHNIQUES.** By Robert de Kieffer and Lee Cochran. 220 pages. 1955. Prentice-Hall, Inc., Englewood Cliffs, New Jersey, \$3.75.

**MITCHELL'S MANUAL OF PRACTICAL PROJECTION.** 450 pp. Illustrated and cross-indexed. Covers every aspect of motion picture projection. Material presented in easily understood language — not too technical, yet technically accurate. Most complete and practical handbook for projectionists ever published. International Projectionist Pub. Co., 19 West 44 Street, New York 36, N. Y. \$6.00.

**EDUCATORS GUIDE TO FREE SLIDE-FILMS.** Compiled and Edited by Mary Foley Horkheimer and John W. Diffor. Ninth Annual Edition, 1957. Educators Progress Service, Dept. AVG, Randolph, Wis. \$5.00.

**STANDARDS OF PHOTOPLAY APPRECIATION.** A Course of Study in Photoplay Appreciation, Including a Photoplay Approach to Shakespeare. By William Lewin and Alexander Frazier. Illustrated. Educational & Recreational Guides, Inc., 10 Brainerd Road, Summit, New Jersey. \$4.75.

**EDUCATIONAL FILM GUIDE: A listing of 18,000 16mm films (many hundreds on Free Loan) in one bound volume (over 1,000 pages) and 4 annual supplements thru Spring 1957. A 1954-58 bound cumulation revised, ready in Fall 1958. Subscribers to this most complete 16mm film service available will be billed only \$15 (\$1 more for foreign). Order today from Dept. LP-AVG, The H. W. Wilson Company, 960 University Ave., NYC 52. Write for free Folder . . .**

**FILMSTRIP GUIDE: A listing of well over 9,000 35mm Filmstrips (many on Free Loan) in one bound volume and 3 annual supplements through 1957. Only \$8.50 for all 4 books (\$1 more for foreign). Order today from Dept LP-AVG, The H. W. Wilson Co., 960 University Ave., NYC 52. Write for free Folder . . .**

**EDUCATORS GUIDE TO FREE FILMS.** Compiled and Edited by Mary Foley Horkheimer and John W. Diffor. Educational Consultant, John Guy Fowkes. 17th Annual Edition, 1957. Educators Progress Service, Dept. AVG, Randolph, Wis. \$7.00.

**EDUCATORS GUIDE TO FREE TAPES, SCRIPTS, AND TRANSCRIPTIONS.** Compiled and Edited by Walter A. Wittich, Ph.D., and Gertie Hanson Halsted, M.A. Fourth Annual Edition, 1958. Educators Progress Service, Dept. AVG, Randolph, Wis. \$5.75.

**TAPE RECORDERS AND TAPE RECORDING.** By Harold D. Weiler. 192 pp. Radio Magazines, Inc., P. O. Box 629, Key ES, Mineola, N. Y. 1956. \$2.95 or \$3.95 (hard cover). Written for the amateur and semi-professional tape recordist, the book gives special emphasis to the use of tape recording in education.

**A WINDOW TO THE CHILD'S MIND** — Alpark's New Educational Handbook by Dorothy R. Luke, 268 pp. The first authentic analysis of Helen Parkhurst's recorded interviews with children. An indispensable guide for teachers. 1955 Starbridge Publications, P.O. Box 574 Grand Central Station, New York 17, N.Y. \$3.50.

**SHOWSTOPPERS:** includes not only some "original cast" albums, but also some worthwhile reissues. "THE STUDENT PRINCE," featuring Lauritz Melchior and Jane Wilson has been coupled with "THE VAGABOND KING" (Decca Records, DL 8362) featuring Alfred Drake and Mimi Benzell in a single disc which can be used in music classes as well as for pleasure listening. Perhaps these, with some of the many other operetta recordings, can become part of a noon-time rainy-day listening program scheduled for auditorium, lunch-room or other place where students may gather for the specific purpose of listening. . . . Certainly many teachers will remember the play, "Green Grow the Lilacs" and recognize that the perennial hit "OKLAHOMA!" (Decca Records, DL 9017—33.3 rpm; or ED 801—45 rpm) which ran for more than five years on Broadway, including several revivals, has become a part of American theatre in that it broke with many footlight traditions and established a new pattern of performance.

### FREE and Inexpensive Photoplay Material

For free copies of PHOTOPLAY STUDIES, write or telephone to the managers of local first-run theaters. Managers are glad to donate packets of PHOTOPLAY STUDIES to interested schools and colleges.

Recent issues of PHOTOPLAY STUDIES are devoted to THE HUNCHBACK OF NOTRE DAME, RAIN TREE COUNTY, RICHARD III, and THE LIVING IDOL (A Lesson in Mythology).

For a sample copy of this 16-page, 6x9 illustrated pamphlet, send 30 cents in stamps to Educational & Recreational Guides, Inc., 10 Brainerd Road, Summit, New Jersey.

# New Filmstrips

Described and evaluated by **ROBERT CHURCH, WALTER PILDITCH, and HAROLD WARD.** Producers should send review copies of filmstrips to Robert Church, Audio-Visual Coordinator, Herman Felsenthal School, 4101 S. Calumet Ave., Chicago 15, Illinois.

## SHAKESPEARE'S PLAY SERIES

Educational Productions, Limited, London SW1-East Ardsley, Wakefield, Yorkshire. Subject area—Language Arts. Filmstrips are in color. Grade level—11, 12, and up.

**RICHARD II** (25 Frames)

**HENRY IV, Part I** (31 Frames) and **HENRY IV, Part II** (36 Frames).

These three strips, comprising 91 frames, of scenes from Shakespeare's plays dealing with the kings of England will be an asset in developing literary appreciation skills.

The costuming and coloring in the series is based on that of the "Old Vic" Theatre productions in England and is excellent. In Richard II the theme of final futility of the "divine influence" in the power structure of the king is explored. The intrigue of Court and Shakespearean humor can best be appreciated through correlation of speaking parts, as outlined in the accompanying guides, and the frames to which reference is made. The personal and interpersonal relationships evolving in drama can be appreciated best through live performance or in motion picture form.

The reign of Richard II and Henry IV have become more meaningful following the study of the form, style, and expression of Shakespearean drama as it was intended for stage-acting in the seventeenth century.

## FRIENDSHIP FILMSTRIP SERIES

Friendship Press. Joint Commission on Missionary Education, National Council of the Churches of Christ in U. S. A., New York, New York. Subject area includes social studies and human relations. Filmstrips are in color. Grade levels as indicated.

**IT HAPPENS EVERY DAY**, (58 Frames, Grade level—sixth and above). A good study of how to think effectively to solve present day problems in human relationships. Teaches a lesson against quick, angry reprisals against people or communities for unkind attitudes. Gives examples of simple intelligent ways to meet and conquer these same unkind attitudes. Upper grade pupils gave thoughtful attention throughout the film as it was presented for evaluation. The

coloring used in filmstrip was excellent.

**KIMIKO OF JAPAN**, (63 Frames, Grade level—fourth and up). A well produced filmstrip showing the customs, clothing, homes and activities of children and families in a foreign land. As filmstrip was shown to an upper grade class, it provoked discussion and students found many similarities among the ways and habits of children of all lands. Namely—the Japanese children have to help at home, go to school, go on errands, do homework and that boys tease the girls and finally become good friends.

## SINGLE SUBJECT FILMSTRIPS

**TOMMY TAKES TO TRAFFIC**, (33 Frames) by Educational Productions, Inc., Hillside, New Jersey. Subject area is safety education. Filmstrip is in color. Grade level includes the middle grades.

This filmstrip is a story of a third or fourth grade boy who chooses to become a good citizen by observing the following traffic rules:

1. Being alert.
2. Using good judgment.
3. Paying attention to traffic safety lessons in school.
4. Learning good traffic behavior from mother and father.
5. Obeying police officers and patrol boys.

The rules are displayed in Tommy's trip from home to school and home again. The color could have been improved. For the most part, the material is well presented and can be used to motivate or culminate a unit on safety.

**PAINTINGS IN THE METROPOLITAN MUSEUM OF ART** (52 Frames), published by Herbert C. Budek Company, 324 Union Street, Hackensack, New Jersey. Subject area includes art and early European history. Filmstrip is in color. Grade level—eighth and high school.

Filmstrip includes paintings of the thirteenth and fourteenth century Italian painters such as Giotto, Bernardo, Daddi, Taddeo Gaddi, and Spinello Aretino. The color is very good. The commentary is too advanced for the elementary grades. However, the filmstrip could be used to stimulate interest in visiting art museums.

The filmstrip could be very useful in the study of Italian art in an early European history course as it points up the similarity of subject matter

## Color Filmstrip Service for Educational Producers

A scene in the Manhattan Color Lab filmstrip on "Robinson Crusoe," processed for Dr. William Lewin's series of Photoplay Filmstrips.

**Let us do all or part of the work you require in color processing. No order too small or too large for our special educational department.**

## Manhattan Color Laboratory

254 W. 54th St., New York 36

## F & B FILM REPAIR AND SPLICING BLOCK

**REPAIRS DAMAGED FILM STRIPS AND 16MM MOVIE FILM**

Used with NEW MAGIC MYLAR Sprocketed Transparent Splicing Tape **1995**

Magic Mylar Sprocketed Transparent Splicing Tape repairs torn, gouged films as good as new . . . without the loss of a single frame.

Applied directly on both sides of the damaged film, Magic Mylar (only 1/1000 of an inch thick) repairs, reinforces and holds the broken film together . . . WITH THE STRENGTH OF MORE THAN 3 TIMES THE ORIGINAL FILM.

#### ISRAEL-THE LAND AND ITS PEOPLE

The Department of Education and Culture of the Jewish Agency, 16 East 66 Street, New York, New York. Subject area includes current events and social studies. Filmstrips are in color. Grade level includes high school and above.

1. THIS IS ISRAEL (65 Frames)
2. GALILEE (54 Frames)
3. HAIFA AND EMEK (68 Frames)
4. THE JORDAN VALLEY (58 Frames)
5. THE LAND AND ITS PEOPLE (62 Frames)
6. THE DAROM AND THE NEG-ER (66 Frames)
7. TEL AVIV AND THE COASTAL PLAIN (70 Frames)

This series presents a bird's-eye view of Israel and its contemporary problems, giving an account of Israel's development to date. Areas such as immigration, agriculture and irrigation, housing, and new settlements, education, minorities, and religions are all touched upon pictorially.

Adults and teen-age children who have had some background on present day Israel can derive the most benefit from this series. The pictorial material presented would appeal to younger groups, however the length of the filmstrips would inhibit continual interest. A narrative script is provided for the filmstrips which do not contain captions. Introductory notes as well as a selected bibliography are provided in pamphlet form with each filmstrip. Suggestions are given which can aid

teachers and group leaders in providing background information and correlating filmstrips with other activities.

#### CURRENT AFFAIRS SERIES

Current Affairs Films, 527 Madison Avenue, New York 22, New York. Filmstrips are in black and white. Grade Range—Upper Grades, High School, and Adult. Subject area—Current Events. This filmstrip company has arrangements with various newspapers.

ELECTRONICS (37 Frames). This filmstrip, sponsored by *The Buffalo Evening News*, begins by explaining what the field of electronics covers. After illustrating electronic equipment with radio, TV, high fidelity, radar, and calculators, the filmstrip explains that electronic equipment normally has vacuum tubes or transistors for operation. Some historic data are introduced. Lee DeForest is credited with the invention of the vacuum tube in 1906 and later the radio became widely used in the 1920's. World War II spread the use of radar which was used as the eyes and ears by the army and navy. The War gave a big boost to the electronic industry and shortly afterwards television was introduced on a grand scale. Today computers are being produced for industrial and commercial use by an industry which within fifty years has become the fifth largest. Pictures in the filmstrip illustrate assembly line methods used in the very complicated wiring and highly exacting work needed for the equipment. The largest users of the electronic products remain the military services and the pressing problem is the shortage of qualified personnel to work in the field. The filmstrip con-

cludes with possibilities for the electronic future. These include visible telephone conversations, electronic cooking, electronically controlled machines, and possible cures for cancer.

Using up-to-date pictures and diagrams for this filmstrip, it becomes a current events feature that may be used in the classroom to stimulate interest in the subject. It covers a highly technical field with a broad coverage in order to interest the uninformed viewer. The continuity of the strip was very good in that it took on only the aspects of the subject that it could cover adequately. Very well produced.

THE NEW JAPAN (42 Frames). This filmstrip concerns itself with the changes in Japan since World War II. Maps and diagrams illustrate the size of Japan, the exports and imports are related, and the problem of being a debtor nation is presented. The effect of the War is well illustrated using news pictures that are explained in the accompanying discussion guide. The problems of agriculture continue to plague the country since only 20% of the land is satisfactory for crops. Industrial might has expanded since 1945 and modern factories along with the important shipbuilding industry are bright spots in the economic picture. Trade barriers are an obstacle to Japan's progress. The United States, the filmstrip explains, was instrumental in establishing democratic ideals in Japan after centuries of emperor rule. Today Japan has a new constitution, vote by secret ballot, political parties, and recently gained a seat in the United Nations. It has been just a little over one hundred years since Commander Perry sailed into Japan's mainland and introduced trade agreements with the western world. The filmstrip concludes with examples of western world influence including radio broadcasting, clothing, modern building, and democratic methods of living.

The purpose of this filmstrip was to show the characteristics of Japan in the last dozen years. It would be quite impossible to go into detail on any of the aspects of the filmstrip without sacrificing the whole picture that the strip tried to present. Further study on each part would normally be

Suffern, New York

needed for a complete picture of the country of Japan. The filmstrip serves well as an introductory aid for the study of Japan or as a part of current day developments. The pictures, mainly of newsmaking events, were interesting and discussion stimulating. Japan's importance as a new force for democracy in the world is stressed throughout the filmstrip.

**THE GEOPHYSICAL YEAR** (42 Frames). Starting with questions that are stumping the experts, this filmstrip immediately captures the attention of the viewer. Examples of these questions are: Is our climate gradually becoming warmer?, Why do sunspots affect our communication systems?, Where does our weather originate?, and How can we predict earthquakes? The ideas behind the setting of July 1957 to December 1958 as an international geophysical year are explained to the viewer. The uses of atomic research, radar, and calculators are aimed toward understanding the basic areas of our upper atmosphere, land masses, and our vast oceans. Quite a portion of the filmstrip is devoted to the bases we and other nations have established in the Antarctic region for the study of weather conditions, ocean currents and other important data. Starting as early as 1954, twelve nations have established 57 bases on that continent for extensive geophysical year observations. The filmstrip goes on to explain

the other efforts connected with this co-operative project. About two thousand other stations are located all over the earth and this demands the co-operation of many nations. The attempts to explain the questions at the beginning of the filmstrip are illustrated by news pictures and diagrams. The launching of rockets and earth satellites by the United States and the U. S. S. R. should aid the study for the international geophysical year. Pictures of the models of these new devices are shown. The filmstrip concludes with thought provoking questions that would make for a stimulating discussion.

From beginning to end, this filmstrip was designed to make the viewer aware of the importance of this event in the world's scientific progress. An overview of the entire project is presented with interesting pictures, simplified maps and diagrams. Most of the pictures have appeared in newspapers and are captioned in the discussion sheet which accompanies the filmstrip. The filmstrip was very well produced and would appeal to anyone above seventh grade.

### MARVELS OF MEXICO SERIES

Charles Scribner's Sons, 59 East Van-Buren Street, Chicago 5, Illinois. Filmstrips are in color. Grade range—Sixth, Seventh and Eighth. Subject area—

Social Studies. This series was designed to accompany a text book series published by the same publisher, but may be used without the book. Series was reviewed as a whole.

- M-1 "THE HISTORY OF MEXICO," 25 Frames.
- M-2 "THE LAND AND ITS USES" (PART I), 31 Frames.
- M-3 "THE LAND AND ITS USES" (PART II), 28 Frames.
- M-4 "HOW THE PEOPLE OF MEXICO LIVE," 27 Frames.
- M-5 "MEXICAN MARKETS," 30 Frames.
- M-6 "MEXICO CITY," 29 Frames.
- M-7 "ARTS AND CRAFTS," 27 Frames.
- M-8 "MEXICANS AT PLAY," 28 Frames.

This series of filmstrips gives a very vivid and well balanced summary of Mexican life and portions of its history. It could be very helpful with any social studies unit on Mexico. Information is summarized and graphically presented so that students readily select the chief points stressed in each individual strip.

The use of color is excellent throughout the film series. The vocabulary is interesting and varied enough to challenge a wide range of reading levels. The entire series showed careful selection of picture matter and vocabulary and deserves a high recommendation for use in the upper grades.

## To Enrich Your SOCIAL STUDIES Program 22 New Filmstrips

### HOW THE INDIANS LIVED (Far Primary Grades)

5 COLOR filmstrips depict the made of life of 5 different Indian tribes. They show how environment influenced the Indians' food, shelter, clothing and activities.

Complete series: \$25.95  
Individual filmstrips: \$5.75

### GROWTH OF THE UNITED STATES (Far Later Elementary Grades and Junior High School)

6 filmstrips in COLOR art work show how the United States extended its boundaries from ocean to ocean. The struggle to settle the new areas is dramatized vividly.

Complete series: \$31.50  
Individual filmstrips: \$5.75

### ASIATIC LANDS AND PEOPLE (Far Elementary Grades and Junior High School)

5 filmstrips in excellent COLOR photography illustrate the present-day life and work of the people of Japan, Burma, Malaya, Thailand, and Pakistan.

Complete series: \$25.95  
Individual filmstrips: \$5.75

### MEXICO—YESTERDAY & TODAY (Far Elementary Grades)

6 filmstrips acquaint children with Mexican life and traditions. Four filmstrips in brilliant COLOR photography tell about Mexico today. Two filmstrips in COLOR art work picture, in authentic detail, the historic influence of the Aztecs and the conquest by Cortes.

## New Film From Britain

Before you see *The Supreme Secret* you will say that it is just about impossible to make a film on The Love of God; and, after you see the film you will say that it was easy to do—so well does Noel Evans and his colleagues (at Religious Films, Limited, 6 Eaton Gate, London, S.W. 1) bring off the job. In 55 minutes they give us several days in the life of a budding delinquent, bringing him along through a number of very interesting and plausible experiences to the place where he comes to *feel* the love of God. At the same time the film brings its audience along so that we come to feel very sure about what this young man feels. And more, we can see the reason why. But, the rest must be left to the film! Slower in pace than many American films, it is one of the things you'll probably enjoy in this film. There is fine acting all the way, good camera-work, and effective low-key lighting. Made to say something on this theme to young people who have collided with the Law, this film will

appeal to a very wide range of audiences, and be useful in and out of church to help people better understand the Love of God. (Inquire of United World Films, 1445 Park Ave., N. Y. 29.)

## Comment On The News

Family Films, Inc., a foremost producer of religious films, has entered the filmstrip field. It announces production plans in such categories as teenage problems, stories for the church school kindergarten, and Christian family living. All productions will be in color and the commentaries will be recorded. The filmstrip production program will be under the supervision of Paul R. Kidd and Donald R. Lantz, both well known in church A-V circles and highly respected by all their A-V colleagues. We wish this concern great success in its new undertaking.

—o—

Cathedral Films, Inc. has launched a program of one-day sound filmstrip workshops which will be held in many parts of the nation. These workshops

are designed to give church leaders and teachers a new insight into the worth of filmstrips, and help them use them more fruitfully in the total program of the church. Local dealers and distributors will cooperate in setting up these workshops for clergy, directors of religious education, church school teachers, youth workers, and other leaders. We commend Cathedral in this effort to extend and improve A-V utilization.

—o—

Concordia Films has undertaken the production of fourteen Old Testament films which will bring to the screen some of the main events and persons from Abraham down to Elijah. Shot in color, this series is designed for instructional purposes, with each episode complete in itself and having a running time of 15 minutes. We believe this shorter length will greatly increase the utilization potential of these films but we wonder why they are to be in color.

—o—

If you listed the "Heroes of God" down across history, who would make your list? Who would make ours? Lists would vary greatly, of that we can be certain. Cathedral Films, Inc. has announced a series of sound and color filmstrips on their list of the "Heroes of God," starting with Patrick, Christopher, Martin of Tours, Margaret of Scotland, Nicholas, and Francis of Assisi. The utilization time for each will be 15 minutes, and the narration will be supported by instrumental music, singing, and sound effects. According to Dr. James K. Friedrich, Cathedral founder and president, this is the first series on some of the men whose lives are a flaming witness to the Christian faith. We await with interest the first release of this series.

## Filmstrip Series On Jesus

Cathedral Films, Inc. is currently bringing to completion its 24-unit series of filmstrips entitled, *The Story of Jesus*. This is one of the largest Biblical series to date and one of the

A scene from the motion picture, *THE SUPREME SECRET*, by Religious Films, Ltd, London, England, which was given its American premiere at the Green Lake A-V Conference.

most useful and important. The filmstrips of this series are all in color and live photography. They have recorded commentaries, one for teaching, and the other for general use and in worship. There are approximately 30 frames per filmstrip and the utilization time is close to 15 minutes in every instance. The titles are:

Part I

- The Annunciation*
- The Nativity*
- The Presentation*
- The Story of the Wise Men*
- The Boyhood of Jesus*
- The Baptism and Temptation*

Part II

- The Calling of the Four*
- The Marriage At Cana*
- The Healing of A Leper*
- The Healing of A Paralytic*
- The Visit to Mary and Martha*
- The Man Born Blind*

Part III

- The Story of the Twelve*
- The Centurian's Servant*
- Rejection at Nazareth*
- Attempted Arrest*
- The Fate of John The Baptist*
- The Raising of Lazarus*

Part IV

- Triumphal Entry*
- The Passover Supper*
- The Trial*
- The Crucifixion*
- Resurrection*
- The Upper Room*

In his nicely worked-out "Master Study Guide" for the series the producer says the series "is to be utilized as resource material for established curricula, and not as a substitute for a curriculum. They are not intended for entertainment or diversion." He warns against their use outside "a thorough-going teaching plan."

The teaching version of the commentary is written for a single voice and printed as well as LP recorded. The worship and general-use version is recorded only, the dialogue being too difficult for the average user to speak with dramatic effectiveness.

Taken as a whole, this series can be used with Juniors and up, but careful selection must be made of those to be used with Primary children. At this age level the wise teacher will study the utilization guide's commentary carefully and develop a much shorter narration in her own words.

For each filmstrip there is "Teachers' Study Guide and Manual" giving all the usual assists plus an extra, namely, the "Instructional Notes for Teacher," a column which parallels the teaching narration. These notes will be especially helpful when used with youth and adult groups.

This reviewer would like to make two qualitative remarks: The producer has done very well to give each Biblical story a setting or context, this reconstruction meeting, it seems to him, the requirements of reasonable supposition. Aside from minor flaws from time to time, picture composition and photography meet reasonable standards. A large undertaking commendably brought off!

### Hockman On Hersh

His handiwork seen in many films, Sam Hersh of Family Films has seldom appeared in print. His editorial comment in the November 1957 issue of FILM WORLD is all the more notable, and we would like to single out a few of his ideas for comment:

*Actually, any film which a congregation hasn't used is new although it may have been made several years ago.*

How true and how little appreciated! Church leaders ask for what is new when they should seek what fits their purposes. What has production date to do with the usability of a good film? But, we have folks around, victims of built-in psychological obsolescence in everything from soap to automobiles, who insist on the new stuff. If it's new, it's good; if it's old, it's inferior, they erroneously think. Producer, distributor, and church leaders must unite to counteract this false assumption. When we do, two things will happen: a) the churches will find some mighty useful material a few years old, and b) the dealers will find that some of the neglected 'old' films will begin to pay their way and no longer sit-out the week-ends on their shelves.

*The only classification in religious motion pictures should be the church calendar; not whether a picture is old or new.*

Too many church leaders use films on a hit and miss basis. They are just ten days away from some event, and looking for a film. Since they are desperate, just one qualification comes to their minds when they write or phone the rental library — "What's new?" Not that they have used all the old pictures; far from it. They think the new will be better. How foolish! Down deep they want a film that will get the job done, but they have not planned far enough or thought out their objectives carefully.

*They want a film for my young people, for the men, for the women; or, for Christmas, for Lent, or for Easter, or some generalized situation and nonspecific use.*

*A good religious motion picture is applicable to more than one major church emphasis.*

How often all of us have heard, "But we had that film!" Quite so; but what did you use it for that time? What group saw it? After all, a good film can be used in relation to many different groups and in relation to many objectives. Films do have 'multiple teaching strengths.' It is up to us to see these multiple uses. Few films are one-shot productions in the mind of the imaginative user. Certainly a good film can make many trips back to the same church if the user knows what he is doing.

These three wise observations mean at least one thing for the local church: *it must have greater familiarity with available A-V materials.* Until churches can solve this problem they will use

too few films and tend to think the new ones are the only ones. No longer do they need to wait for information on films and filmstrips. Producers are supplying excellent lists and catalogues which can be had for the asking. Files can be built by someone in the church; or by a committee. These lists and files can be consulted by those seeking to locate a film for a specific use with a certain group at a given time.

The National Council of Churches, through its Audio-Visual and Broadcast Education Department, can supply the church with the AUDIO-VISUAL RESOURCE GUIDE. It lists several thousand titles, classified under some seven or eight general categories, giving a summary of content, and estimating its general quality. This volume is an A-V "bible" all churches should have. Yet, how many try to get along without this resource! This one volume can go a long way to help any church and its leaders secure a profitable and extensive familiarity with good and acceptable available materials, old and new. Why not write to 257 Fourth Ave., N.Y. 10, today for fuller information. (WSH)

### Distributor's Lament

A religious film library operator wants to know why he can't have prints of a widely advertised and promoted stewardship film. Recommended by denominational papers, a great many requests have come in to him from churches which normally look to him for service. When they call he must tell them that the film is released by the producer, in this instance an interdenominational agency, to certain outlets and that he is not one of them.

But, the promotion back of such films does not inform the churches concerning the devious financing and restricted releasing of such a film. Churches assume that it has been placed in the normal channels of distribution and they don't want to search all over creation for a special source—only to find that the film is booked solid way past the time they would like to use it.

If this situation means anything at all, and it means much, it is a footnote in bold face caps that our distribution patterns, practices, and policies make mighty poor sense and worse economics. We are convinced, also, that we need realism and not rationalization to get the kinks out of such a silly situation.

This sort of distribution plan is as unfair to the churches as it is to the distributors. Films are produced for use, and the more use the better. Churches want films that are new and relevant, and when they are told that

they are not in the right denomination, that they must wait for another type of release, or given any other excuse, they don't quite understand. We don't either! It's time the silly system were abandoned. It never made much sense and it's making less all the time.

### A-V and M-E Go Together

Like love and marriage, and a lot of other things, audio-visual aids and missionary education go together. Who says so?

No other than Fon H. Scofield, Jr., writing on the subject in the November 1957 AUDIO VISUAL AIDS bulletin of the Southern Baptists. "Visual aids—missionary education: these go together. The entire visual production program of the Foreign Mission Board is a response to the idea that experience is the best teacher, and—where experience is impossible—that the vicarious sharing through visual aids is next in line for effective teaching."

Later on he tells of a boy who came home from church saying that he 'had been to Africa.' Indeed, he had been—vicariously. He not only went, but his whole group went with him via the same visual aid. Powerful and inexpensive way to go, don't you think?

"Visual aids are open windows through which most people can 'see' the mission fields and share in the experiences, the hopes, and the frustrations of missionaries around the world." And, he might add that unless most church people see missionary activity via films and filmstrips they will not see it at all, and not seeing it they will not experience it, and having no experience of it they will be more or less indifferent to it.

Words are inadequate for missionary education. They must be combined with images, and these images must be made meaningful by the use of words. But, first there must be the image, the idea, the thing to be explained by the teacher and understood and appreciated by the pupil. And his warning is right to the point when he says, "Successful teaching by words alone presupposes common areas of experience on the part of the teacher

### AMERICAN BIBLE SOCIETY

Audio-Visual Department  
440 Fourth Avenue, New York 16

sarily very limited in missionary education."

This understanding of the problem gets translated into films as the Southern Baptists have carefully fashioned materials to work with.

"For example," he tells us, "the churches will be making intensive effort to teach the principle of stewardship in terms of wealth and in terms of life dedication. The principle can be stated in a sentence, but the build-up of the motivation is another matter."

The Foreign Mission Board has produced three motion pictures to help with this motivation — *Recruits for Christ, All Are Called*, and, *So I Send You*. "They clothe the principle of stewardship with realism, and portray the principle in simple, dramatic, and comprehensible terms."

In making the at-home and overseas outreach of the church vivid to children, youth and adults by the use of well-structured audio-visual aids, we have just scratched the surface. Of printed pamphlets we have almost enough. Give us some *film pamphlets*. Of printed stories, we have an abundance. Now give us some on-the-spot recordings of what goes on in schools and hospitals and clinics. Of flat pictures, we have had none too many, but give us the lively and life-like images on the screen for more appeal and for more lasting impressions. Of speeches by board secretaries, we have already been bored enough. Now give us some speeches by the missionaries themselves who will be coached into telling us about the wonderful people they work for and with.

Yes, Mr. Scofield, audio-visual aids and missionary education *do* go together, and let not this little piece end without paying tribute to the accomplishments of the JCME of the NCC in these last few years. They have given us many fine productions: may they get the money for many more, and may there be no ceiling to their and the learner. This area is necess-  
imagination as they give us the A-V tools we need to get the story told!

"As a committee of four, we have chosen the following films for viewing."

## Impression Of Green Lake!

I refer to the A-V Conference at Green Lake this past September. How can I limit my many impressions to a few sentences? I will try.

As a newcomer, I did not know exactly what to expect. From the first, however, I saw there was to be no lost motion, and by the end of the week I found myself exhausted from a packed schedule. New ideas and materials came at me so fast that I only had time to make note of them. Now, months later, I am still in the absorption process.

My primary purpose in attending was to participate in the script writing group. Here I got my greatest help. Howard Tower, of the Methodist Radio and Film Commission, ably assisted by Ray Wilson of the Jam Handy Organization, gave us many great sessions. New to this phase of A-V work, I learned many new techniques I can put to good use.

I liked the evening sessions. Presenting materials related to the problems discussed in the morning assembly periods was forceful and effective — much better than dealing with principles alone.

Lastly, the presence of people from other countries, nationals as well as missionaries, gave a delightful international flavor to the conference. Of course, we all enjoyed Major Noel Evans of England. It was good to learn something of the A-V needs and accomplishments in other parts of the world.

May I add that I was so well pleased with Green Lake that I am already making plans to attend next year's Conference at Penn State, August 17 to 24.—Dwight Wilhelm, Radio and

Audio-Visual Director, Mars Hill College, Mars Hill, North Carolina.

## A Sharp Tool, Indeed!

A leader in her denomination's state women's organization, Mrs. Carol Allen visits Cedarmont on a speaking engagement. Returning to her city home, she tells her husband that she liked the town. She says she feels the people would accept them. Through an attorney they purchase a lot, and in due time construction begins. When they go out to see the new house, Cedarmont phones buzz with excitement — because the Allens are Negroes. A group goes to their minister to see what can be done to keep them out of the community and the church. The minister avoids committing himself. A meeting is called, and those who attend hold differing opinions about the Allens — some are sensitive to social pressure, others to economic pressures, and some are sensitive to Christian obligations. That's the content of a new 64-frame, B&W, live photography filmstrip, *Crossroads At Cedarmont*, which was released in November by Friendship Press, 257 Fourth Ave., N.Y. 10. (Price, with script-guide, \$3.00)

As this filmstrip ends the future of the Allens is undecided and resting in the hands of people who do not know them; who are seemingly more influenced by emotional tension than by cool logic and theory; and, who are members of the same church. In a way, and deeply so, they are deciding their status, not just that of the Allens. Here is a sharp tool for skilled hands; a powerful discussion starter for any adult group, inside or outside the church. Highly recommended.

## NEW Two New Series of Sound Color Filmstrips for Protestant Churches and Sunday Schools

### "SERMONS FOR YOUNG PEOPLE"

16 original stories, photographed "live." Fine, wholesome, true-to-life, dramatic stories, with a moral—directly tied in with Biblical teachings and Christian living.

Complete with long-playing record and discussion guides.

### "HEROES OF THE OLD TESTAMENT"

16 beautifully colored filmstrips illustrating the Old Testament. Produced in two versions—silent with captions and sound without captions, but with a long-playing record. Both versions have a printed narrative script.

### RELIGIOUS EDUCATION

**Blessings of the Christ Child** fs CONCORDIA \$8. with 12" LP record (one side for adults; other for children) or \$5 separately. Color. A new approach to the Christmas story highlighting in four parts the blessings of Jesus' birth to all mankind. First, to the Old Testament believers waiting for His coming; second, to believers living at the time of His birth; third, to believers today. Part four emphasizes the acts of goodwill, love, and mercy being performed today as a result of these blessings.

## SOUND SLIDE PROJECTORS

**DuKane Corporation** (M)  
St. Charles, Illinois

# Check these 10 points in selecting 16 mm sound projectors

QUESTION	WHY THIS IS IMPORTANT
1 Does it have color-coded threading?	<input type="checkbox"/> Makes threading and operating fast and simple, even for beginners.
2 Does it have safety film trips?	<input type="checkbox"/> Stops film movement instantly in case of film emergency. Guards against costly film damage.
3 Does it have Hi-Lite optical system?	<input type="checkbox"/> In connection with Mark II shutter, throws 38% more light on the screen. Assures bright pictures even in hard-to-darken rooms.
4 Does it have stationary sound drum?	<input type="checkbox"/> Assures clear, smooth sound. Has no moving parts to get out of adjustment. Scans full sound track.
5 Does it have visible one-spot oil system?	<input type="checkbox"/> Transparent filling tube shows oil level. Reservoir automatically feeds oil to all points as needed.
6 Are both reels mounted on top of projector?	<input type="checkbox"/> No overhanging reels to present a "traffic hazard." Projector can be set up on any level surface, even the floor.
7 Does it have single drive sprocket?	<input type="checkbox"/> Eases film stress, because same sprocket controls film entering and leaving projector.
8 Does it have compensating film shoes?	<input type="checkbox"/> Automatically adjust themselves to varying film thicknesses. Guard against splices catching.
9 Does it have 180° swing-out lens?	<input type="checkbox"/> Facilitates threading and cleaning of both aperture and film channel.
10 Is it adaptable for magnetic recording?	<input type="checkbox"/> Complete magnetic recording on film and playback can be added at any time by simply connecting Victor Magnesound.

**ONLY VICTOR OFFERS SO MANY IMPORTANT FEATURES**

The above 10 points give a quick picture of the advanced features you should expect in a modern 16 mm sound projector. Only a Victor brings you *all* of them. And with every Victor you also get the "standard" features of all quality sound projectors, including 2 speeds for sound and silent film, still picture, and reverse projection.

Particularly important is Victor's new red, white and blue color-coded threading. Color lines on projector clearly show where to thread and the sequence of threading. Other time-proven features—exclusive with Victor—are safety film trips, top-mounted reels, and power rewinding with no change of belts or reels.

Victor was first to develop 16 mm projectors and through the years Victor has been first to perfect improvements that assure finest pictures—finest sound—easiest operation. Victor long has been the choice of A-V experts in 73 countries.

**Victor Assembly 10** — Lightweight projector for small audiences. Amplifier operates at 10 watts continuous output, 18 watts peak. Available with 9" speaker, top-mounted and fully baffled—or separately cased 12" speaker as shown.

## NEW VICTOR VIEWER

The first professional 16 mm viewer with "frame counter" priced under \$100. Large 3 1/4" x 4 1/4" screen is brilliantly lit by 75-watt lamp. Equipped with f2.8 triplet lens. All optics coated.

**ONLY \$92.00**

FLASHFILM — MINNESOTA'S CONTRIBUTION  
TO BETTER DRIVING EDUCATION

LET'S SEE THE SCHOOL'S PROGRAM

WHO HAS SAMBO'S PANTS

STICK 'EM UP

From "Song of the Shining Mountains" — Broadcasting and Film Commission

**YOU decide  
how dark  
you want your  
audio-visual  
room with ...  
LEVOLOR  
A.V. blinds!**

(AUDIO-VISUAL)

The lighting conditions of an audio-visual room should always be at the complete discretion of the instructor. Various conditions, subjects and equipment require elasticity in the control of light. And this control should be simple and immediate.

Levolor A.V. (audio-visual) Blinds enable you to change the room from optimum darkness to a soft diffused light simply by pulling the tilt cords.

For full details and specifications, write to LEVOLOR LORENTZEN, INC., Audio-Visual Dept, 720 Monroe Street, Hoboken, N. J.

Be sure to specify

## "GREAT AIDS TO A SUCCESSFUL AUDIO-VISUAL PROGRAM"

### **AMPRO** Hi-Fi **TWO SPEED TAPE RECORDER**

You'll find limitless uses for the Ampro Hi-Fi in your audio-visual program. It combines amazing versatility with a ruggedness that stands up under daily use. Use  $3\frac{3}{4}$  i.p.s. speed for making individual recordings of speech, music, language study and to preserve the speeches of outstanding lecturers at assembly. The  $7\frac{1}{2}$  i.p.s. speed faithfully reproduces music with highest fidelity. Perfect for instructional or music appreciation courses. Precision-built accessory equipment adapts the Ampro for remote control operation or for the recording and transcribing of dictation. **\$249.95.**

### *School Master*

#### **500 WATT PROJECTOR**

**for single-frame filmstrips and  
2x2 slides**

Projects 35mm film strips by remote control or manually. Changes from filmstrip to slides in seconds. A 15-foot remote control cord and standard 35-foot accessory extension cords are available to permit operation from anywhere in the classroom. Accessory Airequipt slide changer permits remote control slide performance. Prices from **\$119.50.**

### **SVE "E-Z VIEWER"**

**gives big 3-time enlargement**

For convenient previewing of single-frame filmstrips. Can be used on desk or held in hand. Keeps cool, easily loaded. Folds to fit into desk drawer. Complete **\$14.95.**

### *Constellation\**

#### **500 Watt 35mm SLIDE PROJECTOR with Remote Control**

Can be operated by push-button on the projector, by manual movement of the slide changer lever, or by 15-foot remote control cord. All without touching the slides by hand. Can also be equipped with accessory Slide-Timer for completely automatic operation. Features  $f/3.3$  coated lens, 3-way switch, powerful air-cool blower operation. **\$89.75.**

\*Trade Mark. All prices include federal tax where applicable and are subject to change without notice.

# **GRAFLEX®**

Rochester 3, N. Y.

A SUBSIDIARY OF GENERAL PRECISION EQUIPMENT CORPORATION

# Breaks through LEARNING barriers

## ...speeds understanding

You'll be amazed at how much faster... how much more thoroughly... your students can absorb new information when you enlarge your teaching scope with this Bausch & Lomb Balopticon® Projector. So versatile that your imagination sets its only limits! With this one instrument you can project big, brilliant, sharply detailed images of:

- **SLIDES**—student-made or commercial.
- **OPAQUE OBJECTS**—drawings, photographs, pages of books or magazines, science specimens, maps, students' schoolwork, etc.
- **FILM**—commercial film strips or individual frames (Film projection attachment optional).

Help your students learn better by helping them see and understand better with a Bausch & Lomb Balopticon Projector.

## Cover: "Song of the Shining Mountains"

Produced by Alan Shilin Productions for the Broadcasting and Film Commission on behalf of the joint Commission on Missionary Education of the National Council of the Churches of Christ in the U.S.A.

This is a motion picture of spectacular contrast. Filmed in color in the Western United States against a background of majestic, natural beauty, the film presents the sordid, shocking truth about life on American Indian Reservations.

It is the compelling story of Andy Red Cloud, a sensitive young Indian who returns from school to the reservation farm home on his ancestral acres—and looking into the life that lies ahead, he sees only misery, poverty, and frustration without promise of future hope, until . . .

Seeking escape from reality, Andy returns to the ancient tradition of his ancestry—he will climb the pinnacle to Arrow Rock, a sacred place in the Shining Mountains. Andy is saved from himself and the stifling influence of the past by the mission workers who discover his wild purpose in time to bring him the peace and power he needs in his hour of crisis.

## January Cover Clicks

Much favorable notice seems to have been accorded our January cover picture, the "Bannister Baby" proposing a motion in a P.T.A. meeting "Oh, let's okay the whole budget." This is just one Bannister Baby frame among the 32 that comprise a most hilarious film-strip entitled "So . . . THIS is P.T.A.?"

It was difficult to make a choice of just one picture that would make the best possible cover. Other runners-up included such captions as "I Second

the Motion," "Now—in the school where I came from," and a most distressed plaint "After I explicitly TOLD the custodian."

The filmstrip was produced and is available exclusively from Pix Film Service, Inc., 34 East Putnam Ave., Greenwich, Conn.

Other educational magazines obviously share our regard for this whimsical true-to-life teaser. Thus the editor of *National Parent-Teacher* calls it "delightful," and from numerous inquiries received from readers it is predicted that "it will be enthusiastically received wherever it is shown."

## Our Own Backyard

It wasn't necessary for Editor Paul Reed to forge far and wide into the field of Audio-Visual interests to find a fitting subject for his Editorial this month; he wisely searched the region closest to him and found it—in the person of one of our department editors. To see how thoroughly and well he has covered his subject, turn to page 68.

## Something Special

As we told you we would do, we have made this February issue of *Ed Screen* "something special" in giving special emphasis to the religious phase of audio-visual education. The Church Department, edited by William S. Hockman, is introduced with an interesting and illuminating article by Mr. Hockman on page 69, facing Paul Reed's Editorial, and it is continued to page 80 where it becomes a lengthy and important department in its own right. A great deal of additional time and interest has been devoted to preparing this material for our readers and we of the staff are fortunate and grateful in that when we call for such extra cooperation, we can depend on getting it. G.M.

# TWO NEW CORONET FILMS

are added to **HUMAN BODY SERIES**  
and **U. S. EXPANSION SERIES**

From the Coronet film, *The Human Body: Digestive System*

Two new films, *The Human Body: Digestive System* and *United States Expansion: The Northwest Territory*, increase the scope of two fine series of Coronet films. Ingenious film techniques characterize *The Human Body Series* to show students in grades 7-12 details of the structure and inner functions of the body. Animation, cinefluorography, x-ray photography, micro- and macro-photography and live action shots are used.

The new film on the digestive system gives an account of its function—the chemical breakdown of complex nutrients into useful food materials. The roles played by the salivary glands, esophagus, stomach, pancreas, liver, gall bladder, and small and large intestines are defined and related to each other. The film is 1¼ reels.

#### Other films released to date in the series are:

*The Human Body: Circulatory System* (1¼ reels, Jr. High, Sr. High)

*The Human Body: Skeleton* (1 reel, Jr. High, Sr. High)

*Each is available in full color or black-and-white.*

The U. S. Expansion Series is planned for use in grades 10-12. Five films cover a number of significant expansion movements from the time the United States was established, with a treatment of the historical backgrounds of each area under consideration. The new film, *U. S. Expansion: The Northwest Territory*, highlights the events leading to the opening of this vast territory for large-scale settlement. We see the work of the Ohio Company Associates and the importance of the pattern of statehood established at this time. Other films re-released in the series are:

*United States Expansion: The Louisiana Purchase* (1¼ reels)

*United States Expansion: Florida* (1¼ reels)

*United States Expansion: The Oregon Country* (1¼ reels)

*United States Expansion: Texas and The Far Southwest* (1¼ reels)

*Each is available in full color or black-and-white.*

#### CORONET FILMS

Dept. ES-258 • Coronet Building • Chicago 1, Illinois

Please send me preview prints of the Coronet films I have listed on the attached sheet. I understand I shall pay only the return postage.

Please send me a catalogue of Coronet Films, including a list of libraries from which these films may be rented.

Name \_\_\_\_\_

School or Organization \_\_\_\_\_

Address \_\_\_\_\_

City \_\_\_\_\_ Zone \_\_\_\_\_ State \_\_\_\_\_

#### Other new Coronet Films include:

##### **How Green Plants Make and Use Food** (1 reel).

The film visually presents elements which green plants need to make food, with an accurate description of the process of photosynthesis.

*Senior High.*

##### **Yugoslavia** (1 reel). This survey of the geography

of Yugoslavia shows city life in Belgrade and Sarajevo, farming conditions, and new economic developments. *Junior High.*

##### **Yugoslav Village** (¾ reel). Here is life in a small

village in Central Bosnia—at home, working in the fields, children going to school, and an exciting market day. *Junior High.*

#### WRITE FOR PREVIEW . . .

Prints of these films are available without charge to those considering purchase. Use the coupon. Those interested in renting these films should send for a list of Coronet rental libraries.

## Applause for Defender

Editor: I have read your inspiring editorial in the November issue of "Educational Screen."

Your article adds great impact to the reprint of Ruth Walsh's letter to a School Superintendent.

It would be wonderful if *everyone* associated with the purchase of audio-visual equipment could receive a copy of both articles.

*W. E. Cheesman*

Radio Corporation of America  
36 West 49th St.  
New York 20, N. Y.

## A Good Question

Editor: I have recently read your October '57 editorial in SCREEN, and I have a suspicion that you deliberately intended to provoke some correspondence on the justification for auditoriums in modern schools. A good thing, too, if it promotes some serious thinking on the part of school planners about the use of which their pet architectural triumph are going to be put. And we all know only too well the point of view which says that if a school has a nice big auditorium with a projection booth, it has an A-V program.

## Scratches on Film Irritate Audiences

Scratches are havens for dirt, and refract light improperly. On the screen, they mar the picture and may distract attention. If on the sound track, they produce offensive crackling.

Fortunately, scratches can almost always be removed — without loss of light, density, color quality, sound quality, or sharpness.

**DEERLESS**  
FILM PROCESSING CORPORATION  
165 WEST 46th STREET, NEW YORK 36, N. Y.  
959 SEWARD STREET, HOLLYWOOD 38, CALIF

However, I think you overstate the case in favor of closed circuit television as a substitute for the proper uses of an auditorium. In many communities the high school auditorium is literally the only place where any sizeable group of people can meet, and is heavily used by all sorts of activities . . . plays, concerts, P.T.A.'s, community functions and ceremonies.

If you eliminate the school auditorium, where are the citizens, in such cases, going to meet to argue about the school budget and thereby provide you with the funds to put in closed circuit T-V?

*Emily S. Jones*

Educational Film Library Association, Inc.  
250 West 57th St.  
New York 19, N. Y.

## Automatic Projector

Editor: Recently I heard of a teacher who ordered films from her A-V center but did not show them to her class. Why? Because she wanted to impress her principal but did not know how to operate a projector.

I believe that films would be used more, much more, if film projectors were simpler to operate. It must be recognized that there are people, quite intelligent people, who harbor almost traumatic fears of anything mechanical.

Therefore I suggest that someone invent and market an automatic film projector which is as easy to operate as a magazine load film camera. Let's do away with threading and loops.

I could imagine that the new machine just has one slot into which the film is started. From there on, rollers, sprockets and "guides" thread the film automatically until it reappears and is attached to the takeup reel.

*Hans Van Sluizer*

Larry Dawson Productions  
617 Mission Street  
San Francisco 5, Calif.

## Safe At Last

Editor: I am delighted that my copy of VISUAL INSTRUCTION IN THE PUBLIC SCHOOLS, by Anna V. Dorris, has been found, and that it is in the collection of the Archives of DAVI, as DAVI VP Lee Cochran, in Educational SCREEN, October 1957 reports — "where it belongs."

Destiny, deKieffer, and an able Archives Committee are to be congratulated for cataloguing an item "lost" since its use in A-V classes at Northwestern University in 1940. Thank you, too, Mr. Editor.

*Stanley McIntosh*

Motion Picture Association  
Washington, D. C.

Ed. Note. You're welcome, Mr. McIntosh.

# "Every 3rd, 4th and 5th grade teacher should order these filmstrips on PHONICS today

...and use them to make children want to read; speed up learning in the entire class."

**Says Devona M. Price**

Director of Instruction, Oak Park, Illinois Elementary Schools and co-author of the filmstrip set, "Phonics: A Key to Better Reading."

**A complete set of 6 filmstrips for only \$28<sup>50</sup> with valuable 88-page teaching guide FREE...**

A valuable collection of ideas and practice materials for teaching reading, writing and spelling. In 2 parts: "Phonics: Useful Reading Clues" (for grade 3) and "Your Dictionary: Learn to Use, Learn to Read" (for grades 4-5). Details lesson plans and a variety of activities to develop learning. Order the filmstrip set and get this guide FREE.

■ "Phonics: A Key to Better Reading," set of 6 full-color filmstrips offers simple and satisfying ways to recognize new words which children encounter daily.

● Presents the principles of pronouncing and discovering the meaning of these new words, and illustrates the applications of these principles.

■ With these filmstrips, you can help your class to read, write and spell better for you—and their next teacher, too.

● Prepared by Devona M. Price and Hilda B. Pogue, these filmstrips are organized to give every child,

regardless of ability, a chance to participate.

● Ready for immediate use. It takes no work, no training, no extra time to put on a filmstrip program.

● Includes these filmstrips: "Let's Start with Key Words" (44 frames); "Make Words Work for You" (40 frames); "Your Eyes and Ears Are Good Helpers" (42 frames); "Vowel Sounds Help You" (34 frames); "Test Yourself on Sounds" (29 frames); and "Help Yourself Read" (35 frames).

● The complete set costs just \$28.50 and includes six filmstrips plus free 88-page teaching guide. Postpaid.

## 15-DAY MONEY BACK GUARANTEE

You may order filmstrips individually, if desired, \$5.00 each postpaid. Begin your set with "Let's Start with Key Words," No. A115-1. Deals with the meaning of phonics and key words in phonics instruction.

## Avid of Pennsylvania

The Audio-Visual Instruction Directors of Pennsylvania and the Pennsylvania Audio-Visual Association for Teacher Education met together in joint conference at the Hotel Yorktowne, York, Pennsylvania, October 24, 25 and 26. Featured speakers at the three-day meeting which was preceded by a tour of the Gettysburg Battlefield were Dr. O. Meredith Parry, Principal of the William Penn Senior High School who discussed "Audio-Visual Education in the Modern School" and Helen Miller Gotswalt who dealt with "Planning, Preparing and Presenting a TV Program." A look at "ourselves as others see us" was offered by Mr. Jean A. A. Laurain of Arles, France, an exchange teacher in the York (Pa.) Schools who discussed his experiences as an exchange teacher. Superintendent of Schools John C. Albohm of York, Pa., spoke at the closing dinner on the subject, "Education in York—Its Principles and Objectives."

At the annual business meeting officers for the forthcoming year were elected. These include Dr. William S. Chiverton, Abington Township Schools, President; Miss Dorothy William, Clearfield Schools, Vice President; and, Miss Mary Renner, Upper Darby Schools, Secretary-Treasurer.

## New York State Audio-Visual Council

The New York State Audio-Visual Council held a special tenth anniversary meeting in Syracuse, December 5, 6, and 7. Featured speakers at the general sessions were Charles Schuller, Director of the Audio-Visual Center at Michigan State University and President-elect of the Department of Audio-Visual Instruction of the National Education Association, and Clyde K. Miller, Director of Audio-Visual Instruction for the State Department of Education, Columbus, Ohio. More than one hundred fifty audio-visual specialists from all sections of the state attended the meeting and joined in the anniversary banquet at which the speaker was State Senator Walter J. Mahoney, Majority Leader and President Pro-Tem of that body.

Officers for the new year are: Clare Armstrong, Niagara Falls, New York, President; John B. McCagg, East Meadow, Long Island, Vice-President; Toby Yeuner, Syracuse University, Secretary; and, Richard Hubbard, Syracuse University, Treasurer.

## People in the News

**New York, N.Y.:** Herbert Rosen, President of Audio-Master Corp., New York City, whose hobby is Postal History, received a gold medal for his collection "History and Evolution of The Letter" at the recent international stamp exhibition BEPHILA held in Berlin, Germany, the same collection, which, besides winning many awards, was selected by the U.S. Post Office Department last year to be exhibited at the General Post Office Building in New York City during "Letter Writing Week."

**Johnson City, N.Y.:** James E. LeMay was recently appointed Mid-Western Regional Director, Visual Aids, Osalid Division, General Aniline and Film Corporation. Until this, he was Assistant Chief, Audio-Visual Center, Air University Library at Maxwell Air Force Base, Alabama. He was also consultant to the staff and faculty of the Air University in the areas of visual communication and photo-mechanical reproduction processes. Before coming to Maxwell Air Force Base, LeMay was Audio-Visual Director and Instructor in Education at the College of St. Thomas, St. Paul, Minn. He graduated from the College of St. Thomas and received an MS from Indiana University.

James E. LeMay

**Fairfax, Va.:** P. H. Jaffarian, President of Audio-Visual Center, Inc., Seattle, Washington, and First Vice-President of the National Audio-Visual Association, has been named General Chairman of the 1958 National Audio-Visual Convention, it was announced by Wm. W. Birchfield, President of the National Audio-Visual Association. The Convention will be held on July

26 through 29 at the Morrison Hotel in Chicago.

**Manila, Philippines:** A few months ago Mr. Everett L. Priest, Training Officer, Education and Training Branch, Division of International Health, Public Health Service, Washington, D.C., requested the assistance of the Medical Film Department of Chas. Pfizer & Co., Inc., in training Miss Milagros M. Paredes of Manila, who will develop and supervise the National Medical Film Library of the Department of Health after her return to the Philippines. Miss Paredes is eager to contact American sources for medical films as well as medical and health film libraries.

Miss Milagros Paredes is shown methods of film inspection and repair by Mrs. Margaret Meehan, Pfizer Film Librarian, left.

## SMPTE Lists "Big Three"

The Society of Motion Picture and Television Engineers ranks Bob Jones University as one of the top three schools in the United States in the field of motion picture instruction.

Bob Jones University is the only school in South Carolina offering work in motion pictures and one of eight institutions in the country offering degrees in this field. UCLA, the University of Southern California, and Boston University are listed with Bob Jones as offering the master's degree in cinema.

The four schools whose undergraduate degrees in the motion picture field as recognized by the SMPTE survey are New York University, Columbia University, City College of New York, and the University of Miami at Coral Gables, Fla.

# KODAK SOLVES ANOTHER PROJECTOR WEAR PROBLEM

## New Kodak Pageant Sound Projector, Type II, adds new wearproof pulldown tooth to other long-life features

Five years ago Kodak made the first in a long series of important 16mm projector innovations—*permanent pre-lubrication*. Since that time you've *never had to oil a Pageant Projector*, never had to worry about someone else oiling one improperly, or letting one run dry. You've been free of the commonest source of projector trouble, improper lubrication.

Now Kodak introduces a new type of pulldown mechanism with a tooth virtually *wearproof*, because it is made from *hard tungsten carbide*. This important advance will mean less maintenance, because a projector pulldown tooth is subject to continuing and relentless wear. It engages the sprocket holes in the film 24 times a second—

16,000 times during a 20-minute movie—billions of times in the projector's service life.

**Proved in use at Disneyland**, the new Pageant pulldown claw laughs at wear! In more than *2000 hours* (equivalent to about 5 years of normal use!) the tooth showed only a slight polishing, no grooving or flattening! (See magnified photo at right.)

**Other new Pageant Type II features** are 1200-watt lamp capacity and a 3-wire power cord. (See pictures below.)

To get all the facts, write for illustrated brochure that explains why a Pageant Projector gives you brighter pictures, better sound fidelity, and sharper images.

HERE'S a magnified photo of the tungsten carbide tooth on the Pageant Projector pulldown mechanism, tested more than 2,000 hours at Disneyland. Notice it shows only slight polishing of the surface—no grooving or flattening.

**EASTMAN KODAK COMPANY, Dept. 8-V, Rochester 4, N. Y.**

For AUDITORIUM use, longer throws, larger, wider screens, new 1200-watt lamp capacity give 16% more screen brilliance than projectors limited to 1000-watt output.

MUNICIPAL codes calling for ground wire are satisfied by new 3-wire power cord. Cord has adapter for 2-wire outlets, also.

NEW Kodak Pageant Sound Projector, Type II, has 8-inch speaker in baffled enclosure—15-watt amplifier—exclusive Kodak Super-40 Shutter—sets up easily with folding reel arms and belts attached.

**Kodak**  
TRADE-MARK

## Safety Film Contest

The National Committee On Films For Safety announces the opening of its 1958 safety film contest to select the outstanding films on accident prevention produced or released during 1957. This is the 15th annual contest conducted exclusively for films on safety.

Awards will be made in three film classifications; theatrical, non-theatrical and slidefilms. In addition, and at the discretion of the judges, awards may be given separately for "Instruction-teaching" and for "Inspirational" purpose films. No charge is made for contest entries or for awards to sponsors. Deadline for the receipt of entries is February 10, 1958.

Entry forms may be had by writing the Committee at its headquarters: 425 North Michigan Avenue, Chicago 11, Illinois.

## Silver Anniversary

The world's largest educational motion picture distributing facility — the Audio-Visual Aids Service at the University of Illinois — is celebrating its Silver Anniversary Year.

In 1932 a cloakroom in University High School, Urbana, was converted into the first office for the venture. (Present headquarters are in the University of Illinois Arcade Building, 713 S. Wright St., Champaign.) The original film library consisted of half-a-dozen or so films, a few movies of "Red" Grange's runs, some 35mm

silent films and some glass slides. The first 16mm films were added in 1933.

The collection now totals more than 7,500 titles, 17,000 prints, and un-numbered film strips.

Last year, almost 5,000 school systems, civic organizations, clubs, churches, etc., 3,000 or more in Illinois and the balance in other states and in many of the nations of the free world, used the service regularly. An estimated 10 million persons saw Audio-Visual Aids Service films in the past year.

The Audio-Visual Aids Service is a part of the U. of I. Division of University Extension under Dean Robert B. Browne.

## Olympic Changes Name

Because of requests by many A-V Directors and confusion over similar company names, Olympic Films has changed its name to Petite Film Company. Under the new name, they are offering expanded services. Besides offering exclusive nation-wide sales for all the films formerly sold by Olympic Films, they are, for the first time, offering RENTALS on all titles.

The Petite Film Company is located at 6101 Fremont Avenue, Seattle 3, Washington.

## 83rd SMPTE Convention Planned

Plans are now being completed for the forthcoming SMPTE Convention which will take place April 21-25, 1958, at the Ambassador Hotel, Los Angeles. Herbert E. Farmer of the Cinema Department, University of Southern California, chairman of the convention program and Bernard D. Plakun, General Precision Laboratory, heading the papers committee, are assured that the 83rd semi-annual convention will be the biggest and best to date.

The Society is taking advantage of the Ambassador's facilities by staging a comprehensive exhibit of the latest industry equipment developments. Committee chairman for the exhibit is John B. Olsson, Houston-Fearless Corp.

## AVCPI Projects

The Audio-Visual Commission on Public Information has distributed more than 50,000 public relations booklets to audio-visual leaders throughout the United States, according to Harold E. Hill, Commission chairman. The AVCPI is a joint committee of nine national organizations concerned with the improvement of instruction through wider and better use of audio-visual materials and methods, and the booklets distributed so far are "merely the beginning."

The newest **PROFESSIONAL JR.** Tripod with removable head, has these modern improvements: Simplified camera attaching method • Telescoping pan handle with adjustable angle, & sockets for left, right or reverse tilt • Pan tension adjusting knob, independent of pan lock • Cast in tie-down eyelets • Self-aligning double leg locking knobs. **PRO JR.** still maintains its precision workmanship at **NO INCREASE IN PRICE.**

# PHOTOPLAY FILMSTRIPS

Prepared by William Lewin, Ph.D.

In spite of pleadings, Columbus refused to turn back.

28

**Columbus**—Black-and-white, based on the J. Arthur Rank production starring Fredric March. 55 Frames. \$3.50.

**The Vikings**—In full color, 47 frames, based on the Kirk Douglas production. \$7.50.

**Hansel and Gretel**—In full color, 42 frames, the highlights of the beloved fairy tale as performed by the charming Kinemins of Michael Myerberg's screen version, released by RKO Radio Pictures. \$7.50.

**Greatest Show on Earth**—In full color, a lively pictorial guide to the circus, based on Cecil B. DeMille's Technicolor photoplay, which won the Academy Award in 1953 as the best picture of the year. 40 frames. \$7.50

**Ulysses**—In full color, 64 frames, a pictorial guide to the new Paramount screen version of Homer's *Odyssey*, produced in Italy. An invaluable aid to the study of the classic. \$7.50.

**Knights of the Round Table**—A set of two filmstrips. Part One, 25 frames, explains the background of the story, its theme, its significance as an early attempt to organize a league of nations and how the United Nations Security Council is the Round Table of today. Part Two, 28 frames, tells the colorful story of the great legend, based on the M-G-M photoplay. \$7.50.

**A Lesson in Mythology**—Explains *Andromeda*, the *Minotaur*, *Iphigenia*, etc., based on M-G-M's *The Living Idol*. 25 frames, color. \$7.50.

**The Glass Slipper**—The charming fairy tale of *Cinderella*, told in a new way, based on the M-G-M photoplay. 36 frames in full color. \$7.50

**Alexander the Great**—Biography of the first man to conquer the civilized world, based on the photoplay. Shows Alexander's effort to unite Europe and Asia, a task with which the U.N. is still faced. 55 frames. \$7.50.

**Adventures of Robinson Crusoe**—In full color, 50 frames, a clear pictorial guide to the Defoe classic, based on the United Artists screen version. \$7.50

**Richard III**—Based on Laurence Olivier's colorful screen version of Shakespeare's famous play. 48 frames. \$7.50

**Romeo and Juliet**—Shakespeare's great love story illustrated in color from the J. Arthur Rank production filmed on location in Verona and other Italian cities. 44 frames. \$7.50

**EDUCATIONAL & RECREATIONAL GUIDES, Inc.**

10 Brainerd Road, Summit, New Jersey

said Mr. Hill. The two titles distributed thus far are — "Gateway to Learning" and "A Crisis in Education," but they are soon to be followed by several new publications.

"The Case of the Curious Citizens" will be available from the commission early this year. It is a full-color audio-visual presentation explaining the value of modern teaching materials and will consist of a double-frame color filmstrip, 36 frames in length, designed to be cut up and made into 2" x 2" slides, with accompanying record and manual. The presentation was prepared for the commission by Adrian Ter Louw, Eastman Kodak Company, Rochester, New York.

Other projects of the commission nearing completion include a radio-TV publicity manual for audio-visual directors, a basic A-V manual for school administrators, two booklets on proper design of classrooms and school buildings to insure good instruction, one of which will be prepared in cooperation with the School Facilities Council, a studio of audio-visual budgeting, and a revised edition of "Gateway to Learning" aimed at religious users of A-V materials and methods.

**New Educational Series**

Educators ranging from United States Commissioner of Education

L. G. Derthick to local school board heads have joined leading critics in acclaiming "Adventures in Number and Space," television series developed by the Westinghouse Broadcasting Company, Inc. in cooperation with the Department of Mathematics, Teachers College, Columbia University, to make mathematics more exciting and entertaining to children, through clever use of Bil Baird and his marionettes. The series is presented on the WBC television stations in Baltimore, Boston, Cleveland, Pittsburgh and San Francisco, and will be broadcast in New York by WABD, DuMont's Channel 5 station, in a nine-week series starting Monday, Nov. 18 at 7:00-7:30 p.m.

The nine programs in the series are, in order: "How Man Learned to Count" (arithmetic); "Quicker Than You Think" (the electronic computer); "The Mysterious X" (algebra); "What's the Angle?" (geometry); "It's All Arranged" (arrangements and combinations); "How's Chances?" (probability and statistics); "Sine Language" (trigonometry); "Stretching the Imagination" (topology); and "Careers in Mathematics."

**Competition Aids A-V Club**

Competition, which is a natural spur to greater efficiency in athletics and other scholastic activities, was used to assist the training program of the student Audio-Visual Club at Crozier Junior High School, Los Angeles, California.

The A-V Coordinator, Mrs. Younker, noting that most of the club members had free hours in their school program, introduced the competition as a means of productively making use of that time. The contest involved setting up, loading and operating a completely "buttoned-up" projector. This meant beginning with a completely closed unit, setting up, opening the case, extending reel arms, loading and threading the film and starting the projector in operation with picture and sound. One eighth grader, James Jones, accomplished this in one minute and 20 seconds.

**Calendar of Events**

- Feb. 16-23—The annual observance of Brotherhood Week sponsored by the National Conference of Christians and Jews. Information concerning the observance can be had by writing NCCJ, 43 West 57th St., New York 19, N.Y.
- Feb. '58 — Northwest College Audio-Visual Conference, University of Washington, Seattle.
- March 10-12 — Meeting of the Audio-Visual Commission on Public Information, Syracuse, New York.

The TSI Duolite, provides large screen projection and also TV-type pictures on built-in, folding screen. Holds up to 2000 ft. of film.

**THE TOTAL IMPACT**

OF MOTION, SIGHT AND SOUND

NOW IN UNDARKENED ROOMS *too*

The power of motion pictures is now yours to employ virtually anywhere. There's a TSI projector for every use—desk top, office, shop, or auditorium, with standard projection, repetitive projection, and built-in TV-type screen. All are light weight, and of unique design for economical upkeep. TSI users comprise a blue ribbon list of businesses and educational institutions in the Americas and overseas. Let us arrange a demonstration through our dealer. No obligation to you. Write or call direct to:

Wally Moen  
**TECHNICAL SERVICE, INC.**  
 30865 Five Mile Road • Livonia, Michigan  
 NEW YORK OFFICE  
 141 E. 44th St., New York 17  
 WEST COAST OFFICE  
 4357 Melrose Ave., Hollywood 29, California

The TSI Model D, for both large screen projection and TV-type picture on built-in screen. Includes magazine for repetitive projection without rewinding.

The TSI DeVrylite, small and light weight, provides unsurpassed picture and sound for auditoriums and classrooms. Accommodates up to 2000 feet of film.

The TSI Moviematic, with built-in, folding screen, weighs less than 25 lbs. Use in lighted and darkened rooms. Repeats film without rewinding.

# Looking at the Literature

**THE FOCAL ENCYCLOPEDIA OF PHOTOGRAPHY**, MacMillan, N. Y., 1956, 1298pp, \$20.00. Ten years in preparation, this single-volume encyclopedia from Britain is admittedly "primarily designed for readers with an active interest in photography." It is no substitute for the back files of the *Journal of the Society of Motion Picture and Television Engineers*, but it does give very useful factual data on nearly any photographic and cinematographic topic likely to concern teacher, photographer, or reader. Audio-visual specialists and science teachers will find the illustrations especially worthwhile. The book draws predominantly on highly qualified British resources, but there is notable international representation as well, (though only eleven of the approximately two hundred contributors are from the United States). Excellent cross-references integrate many concise definitions with related full-treatment articles. Except for the specialist who seeks definitive data in his own field of work, this should prove a most useful addition to any technical, educational or public library.—WFK

**FILMS FOR PUBLIC LIBRARIES** is a publication of the American Library Association, intended to supplement the list published in 1955. The introduction, written by Mary Shortt, then of the Brooklyn Public Library, is a lively analysis of the problems of selecting films. The list itself provides information and synopses of 76 films covering a wide variety of topics and interest levels. The selections should be a great help to anyone choosing films for a general audience. Copies of the booklet may be ordered from the ALA, 50 East Huron Street, Chicago, Illinois.

**RESPONSIBILITIES OF THE FILM PRODUCER AND SPONSOR**, published by Association of National Advertisers, Inc., 155 E. 44th St., New York 17, N.Y., 36 pages, price to non-members \$5.00.

Comprehensive analysis, by ANA Audio-Visual Committee. This study originally published in 1948, revised 1950, is here expanded and brought up to date. An invaluable check-list for both sponsor and professional and semi-professional producer of educational and religious films and filmstrips, as well as for the commercial

sponsor for whom the survey was made. Every step clearly traced from initial "idea" to final contract and delivery forms.

**RESOURCE LITERATURE FOR SCIENCE TEACHERS**, John S. Richardson, ed., bibliography, Books and periodicals grouped under 19 headings. One page is devoted to audio-visual resources and techniques and occasional av emphasis is noted in other sections. 65pp. lithoprinted, \$1.00 from College of Education, Ohio State University, Columbus.

**THE PERCEIVED APPEALS OF TELEVISION PROGRAM CONTENT**, Richard F. Carter, University of Wisconsin Television Laboratory, Research Bulletin No. 8, Sept. 1957, Madison, 179 pp., (offset).

Scholarly summary of previous research carries forward the findings of Wisconsin's own Bulletin No. 4 (Content Preferences in Television) into a study of what types of program content seem to have similar kinds of appeal to the audience. Content and interest categories in newspaper and radio are compared with those of television.

## Stewart **ONEPIECE** Seamless REAR PROJECTION SCREENS

One of These Three Fits Most Needs

### LUXCHROME

FOR VIEWING slides or motion pictures under roomlight conditions; for business, education, research, advertising, display.

### PROCESS

FOR PHOTOGRAPHIC BACKGROUNDS; special effects in motion picture and commercial still photography.

### TV BLUE

FOR TELECASTING live action in studio against projected "location" backgrounds.

#### OTHER TYPES AVAILABLE FOR SPECIALIZED USES

STEWART . . . the screen preferred by 9 of the top 10 Hollywood motion picture studios . . . gives you brilliant, sharply defined rear projected images for either viewing or photographing.

You, too, can now have the quality of Stewart award-winning screens, born of the demands of critical motion picture and TV studio technicians. Here is the one truly *onepiece* screen for perfect rear projection, made in all sizes from table-top to large set proportions.

*Specialists in professional screens: rear and front projection.*

# CHALLENGE IN THE CHURCH FIELD

There's good reason why this February, 1958 issue gives special emphasis to the church use of audiovisual materials. Our editorial conscience has been bothering us. We've been taking our Church Department and its very competent editor too much for granted. We think it is high time we focus a spotlight on this Department and boast modestly of the part we've played in extending the use of audiovisual materials in churches.

During the past ten or twelve years, the increased quantity and quality of audiovisual materials for church use has been one of the most significant developments of the whole audiovisual field. In this time, motion picture projectors, tape recorders, and other equipment have become standardized tools in church and Sunday school. This situation didn't just happen over night. It had developed slowly but surely over a period of many years. The belief that pictures could and should be used in church work was not something that EDUCATIONAL SCREEN has but recently discovered. This magazine didn't sight the bandwagon and thumb a ride. We helped gather the lumber to build the bandwagon thirty-five and more years ago.

It was in the June 1923 issue that Dr. Chester C. Marshall launched an article and an idea with the following words: "Motion pictures in the church are still, in the mind of the average individual, very much of an innovation, and like all innovations, are regarded by many with suspicion and by others with positive hostility." Dr. Marshall argued that motion pictures "are simply the evolution of printing" and that "if a printed page can be used for furthering the work of God, then why cannot the motion picture, in an even more effective way, be used for the same purpose?"

Some picture materials were already available, but the "channels through which information as to these films may be spread to ministers scattered all over the

land have been utterly inadequate." So here was the idea launched by Dr. Marshall and SCREEN's Editor, Nelson L. Greene, that there would be a Church Department of the magazine devoted to spreading information about pictures and providing a forum for discussion of their value and use in churches.

We're proud of the tradition of our contribution and service both to the church field and to the audiovisual industry. We're proud too of the way this tradition has been carried forward by the present Editor of the Church Department, Mr. William S. Hockman. He is an editor with ideas and opinions, and with fully earned rights to hold those opinions. His belief in the values of audiovisual materials has the soundest philosophical base; and his years of practical experience in applying all kinds of audiovisual materials to the work of the church provide him with the knowledge of which he writes.

There's one thing that Bill knows for sure, too, about the use of audiovisual materials in the church field. That is, that the job is not yet done. He knows how far we have come; yet he knows also that we've further to go. We need to improve still further the quality of the materials available. More churches must acquire the audiovisual equipment they need to make greater use of the materials available to them. Church leaders and teachers alike must learn more about the best ways of using materials.

There has been great accomplishment in the church use of audiovisual materials, but there is still the challenge of more that can be accomplished. Mr. Hockman knows it, and we know it. That is why you, our readers, can be sure that we will not rest upon our traditions and record. We will continue our efforts to meet that challenge.

*Paul C. Reed*

# Church department

by WILLIAM S. HOCKMAN

## A UNIQUE ACHIEVEMENT

Across the whole A-V landscape there is nothing to compare with the preview and evaluation service of the Department of Audio-Visual and Broadcast Education (DAVBE) of the National Council of Churches (NCC). It is a unique achievement.

What is this service? Out across the country there are Preview and Evaluation Committees which receive A-V materials for preview and evaluation. They work under the guidance of DAVBE and use forms which have been developed by it, sending their findings to DAVBE for summation and publication.

The establishment of these committees was not easy. It has taken years to increase their number. However, they now number more than 30 and other committees are in process of formation and getting under way.

The idea for these interdenominational evaluation committees really grew out of a suggestion made at the Second International Workshop in Visual Education, held at Lake Geneva, in 1945. At that time a national board of review was proposed for the church field. It simmered for quite a while on the back burner, but got moved up a few years later, taking the form of the present committees which work under DAVBE.

There is no better way to show how well these committees can do their job than by exhibiting one of their evaluations as we find it in the Evaluation Bulletin of the Visual Education Fellowship (VEF) for Jan.-Feb. 1957:

### Palestine in Jesus' Day: part 2

Sixty frames, color, script, guide. Produced by the Bureau of A-V Aids of the Evangelical and Reformed Church, 1955. Available from the producer and the Missions Council of the Congregational Christian Churches. Sale: \$5.00. (Part I, 63 frames, also sells for \$5.00; available individually or with Part II).

Live photography and artwork blend in a brief history of Palestine's geographical divisions; a description of the people; their homes, food, clothing; an explanation of the educational program for the children, and the religious practices of all ages; and an account of the Roman Empire's influence upon the country.

For instructional purposes including discussion stimulation, the material is **HIGHLY RECOMMENDED** for juniors through adults and **RECOMMENDED** for primaries with minor script adaptation at these age levels. Excellence in accuracy, comprehensiveness, and potential for utilization offer new relevance for Jesus' words, new backgrounds of Him and His time, and new understandings of His teachings. Follow-up should be simple since the script leaves correlation and discussion openings along its way. (Part I, evaluated in the 1956 Supplement to the AVRG Third Edition—p. 543—also is **HIGHLY RECOMMENDED** for juniors through adults.)

It is quite possible that the work of several committees went into this statement as it appears above. It is the policy of DAVBE to have the same materials previewed and evaluated by more than one committee if at all possible. Thus, the statement prepared by DAVBE for publication rests on a broader base of judgment.

These Preview and Evaluation Committees, scattered from Seattle to New York and from Dubuque to San Antonio, have just about caught up with the evaluation of extant material. They have accomplished a mountain of work. They have not been paid. They have been praised but little. Yet, who has served the A-V movement and the churches any more loyally or effectively?

In the fall of 1957 the VEF Bulletin was discontinued and the publication of the evaluations transferred to the pages of the **INTERNATIONAL JOURNAL OF RELIGIOUS EDUCATION**, a monthly publication of the Division of Christian Education of the NCC. In this form these evaluations will now reach thousands where they reached hundreds before. Furthermore, they will now reach church school officers and teachers, and church laymen, who have a general interest in religious education rather than just those leaders who happen to have also a special interest in audio-visual aids.

So well are the committees doing their work that evaluations are coming out closer and closer to the release date of materials. Below is an evaluation of an important film as it appeared in the **INTERNATIONAL JOURNAL** (257

Fourth Ave., New York 10) for November 1957, only several months after its release.

### Split-Level Family

*29-minute motion picture, color or black-and-white. Produced by Family Films and Broadcasting and Film Commission NCCUSA, for the Joint Department of Stewardship and Benevolence, NCCUSA, 1957. Available from Religious Film Libraries, denominational publishing houses, and other local BFC rental libraries. Rental: \$12 color, \$8 b/w.*

This is the true-to-life story of a rather typical, middle-class, American family. Nominally interested in the church, they are confronted with the contemporary dilemma of financing their dream home on a real budget. The parents come to sense the conflict of values involved in the outlay of time and money through the example of their teen-aged daughter who realizes one day how little she is really giving to her church. Thus, the film dramatizes the attitude changes, decisions, and spirit of rededication experienced by an "average" church family.

Presenting a believable portrait of a family in one socio-economic class, the film is *highly recommended for junior highs through adults as inspirational instruction as well as a discussion springboard and motivation stimulator.* The dramatization offers excellent moments of sensitivity as the daughter and parents wrestle with the implications of total stewardship. Ideal for a local church financial canvass kick-off, the piece would return the rental investment most completely if shown to your canvassers *again* after its congregational showing.

During the VEF-days the work of the Evaluation Committees was given permanent printed form in the **AUDIO VISUAL RESOURCE GUIDE**. To date three supplements of the AVRG have been issued. They have served the churches well, and have often been referred to as the "A-V Bible" by those who appreciate their tremendous worth.

We are pleased to close this little piece by noting that the Fourth Edition of the AVRG will be published this coming August. It will contain some 2500 classified and indexed evaluations of the most useful and important church related audio-visual material. From here on it will be issued every two years. These biennial volumes will give permanent book form to the evaluations which come from

(Continued on page 80)

Arnold Luce, Minnesota Audio-Visual Consultant, demonstrates the new FLASHfilm method to J. B. Shields, St. Paul Supervisor of Driver Instruction and class. FLASHfilm demonstrations of this kind were valuable in gaining cooperation between A.V. people and instructors.

An inquisitive and eager group of Joe Shield's driver training students listen to Arnold Luce explain the principle of the tachistoscopic FLASHfilm method. The equipment required is a 35mm filmstrip projector plus the tachistoscopic attachment and film situation.

# FLASHfilm—

## Minnesota's Contribution To Better Driver Education

by **Arnold E. Luce**  
Audio-Visual Consultant  
Minnesota Department of Education

**T**HROUGHOUT the year 1958, the State of Minnesota will be celebrating its 100th anniversary of statehood. As a result of this anniversary celebration there will be many important events taking place within the state. It seems appropriate at this time to describe for the readers of Educational Screen and Audio-Visual Guide, a new method of teaching driver training which has been developed and perfected in Minneapolis and St. Paul.

We all know that just about everything has been tried in automobile safety without really altering the death toll on our roads. Despite warnings, increased law enforcement and every type of national safety campaign, death on wheels has pursued its statistically certain course. The hard facts remain that for roughly every two-hundred thousand miles traveled, one person is killed on this nation's highways and roads. So many safety devices and campaigns have been tried without success that men who make safety their pro-

feSSION have become a weary, jaded lot with glum brows and set jawlines.

It gives this writer considerable satisfaction therefore to describe a new visual aid idea for safety, an application of a device that promises for the first time to assist in developing good driving judgment in the classroom. This new method called "tachistoscopic FLASHfilm" combines two old standby teaching devices into a new, emotion compelling method which can actually influence new attitudes and condition the reflexes for driving.

Lee Kuluvar, Firearm's Safety Director for Minnesota, one of the FLASHfilm developers who has spent his entire adult life working on safety, says, "It's the first device for safety education which contains all the elements that can actually transform an inexperienced-or-reckless driver into a safe-and-careful one without leaving the classroom."

The National Safety Council saw the device in its developmental form, and asked its creators, Jim Klapmeier and Lee Kuluvar, to bring it to the 1956 National Safety Council Congress for a full-scale demonstration. The method was overwhelmingly endorsed by the

entire Congress, and was personally commended by Dr. Herbert J. Stack, Director of New York University's Center for Driver Education.

In Minnesota, birthplace of the FLASHfilm method for Driver Education, safety experts including former Commissioner of Highway Safety, Earl Larimer; Minnesota Safety Council Chief, A. L. Rohweder; Joe Neal, Minnesota Supervisor of Health, Physical Education, Safety and Recreation; and Truman Smith, Minneapolis Driver Training Supervisor, enthusiastically cooperated with and encouraged the men working on the project to continue with the difficult task of transforming a unique idea into a motivating and usable product.

Demonstrations to groups of teachers have shown that this new visual method, FLASHfilm, is a way of thinking as well as a new application of two standby teaching devices namely, the filmstrip and the tachistoscope.

This new type filmstrip, unlike most on the market, does not show pictures of accidents. This old shock treatment approach to auto safety education has been eliminated completely. Says Jim Klapmeier, enthusiastic promoter of

highway safety, "Everybody knows there are accidents; we feel it is more important to teach preventive driving than fear."

The approach of the tachistoscopic FLASHfilm method is simple. It shows a set of two pictures. The first is a behind-the-windshield view of a usual and easily recognizable driving situation. It is an introduction to a new kind of learning situation. As the student leisurely views the first picture, the teacher asks him to study it to see if he finds signs that could mean possible danger. Is there an obstacle ahead, a car out of its lane, or a vehicle entering the intersection? By learning to recognize the accident signs the immature driver learns years of practical "driving sense" without the tragic effect of trial-and-error road learning. Next, the student is distracted from the driving scene for only a short time; a distraction which happens so frequently to all drivers. The teacher then tells him to look at the screen again. By use of the tachistoscope timing device, a second picture is flashed for  $\frac{3}{4}$  of a second which is the normal reaction time as determined by the National Safety Council. This "flash" time realistically simulates actual driving experience and decision making. The second or critical picture elucidates how the driving situation has changed in but one short second. To the second picture the student must respond with the reflex-action he believes would avert an accident. (See Enclosed Pictures)

The student can actually make realistic life-saving responses to both pictures. Each picture teaches its own lesson, and the result is a vivid living-learning situation. From the first picture, the student learns that preventive driving is far better than reflex-actions. From the second he learns correct emergency action. In addition, the trainee learns the consequences of non-attention — which is present in 85% of all highway accidents.

The tachistoscopic FLASHfilm method has been tried out in a pilot test in the Minneapolis public schools, and schools in Michigan, New Jersey, New York, Texas, and Iowa. It was found that the device is immensely popular with both students and teachers. On the teaching side, it almost compels group participation. On the student side, it is a competitive aid that fosters interest and motivation.

Millard Sundin, Phillips Junior High School Instructor of Minneapolis, has found that the FLASHfilm method eliminated the largest problem in training teenage drivers, namely that of the inability to impart good driving judgment. Can judgment be taught by the

traditional lecture technique? The driving public acquired their judgment by trial-and-error experience on the highways of the United States. Trial-and-error learning that kills! Actually today our driver education methods foster *poor* judgment. It is a fact that in all methods of driver training over 90% of the instructional time is spent on teaching mechanical skills and less than 10% is spent on the judgment training. In our high schools it is the behind-the-wheel skills, reaction time, and quick response that are emphasized and improved. By stressing the mechanical skills, our present methods have lulled the student into feeling that if he can mechanically manipulate a car he is a "good driver." Skillful operation is synonymous with being "safe." Because of this continued stress

on manipulative skills many of our students feel superior to the instructor because they can surpass his skill in the mechanical operation of the automobile. Since this teenager has excellent reflexes and quick reaction time he should make the best and safest driver. Why is it, then, that in a recent study, 16-year-olds had nine times their share of accidents when compared to the 45-year-old group? Why? Because this youthful driver with his superior mechanical skills has not yet developed the judgment necessary to cope with driving situations. Our present license examinations also foster *poor* judgment because again, the stress is on mechanical skills. Until we change our basic learning processes we

(Continued on page 75)

**PROBLEM:** You are traveling a two-lane highway at 50 mph in the picture above and the approaching car is doing about the same. Your attention wanders for a moment and the next thing you know the situation has changed (in picture below). Study photo below for  $\frac{3}{4}$  second; what would you do? Why?

# Let's "see" the school's

All sorts of inexpensive school-produced visual media can be used to show building needs, classroom learning experiences, and to cement school-community relations

FOR years school administrators have made good use of newspaper articles and pictures, radio programs, and the perennial school annual to publicize and interpret the activities of their schools. Effective use of these media contributes to public enlightenment concerning educational practices and achievements on the local level.

Since we are in an era of extreme visualization, additional and more effective means of visual communication are continually being developed. Some of the suggestions given in this article may indicate additional ways in which the *projected* picture can help school administrators augment and strengthen their school-community relations.

## Try Colored Slides

It is not unusual to hear of Indiana teachers putting their 35mm cameras to good use. Using indoor color film and flash bulbs, they record plays their pupils have written and acted out, murals that have been drawn, and many other activities that picture the youngsters at work and play. These 2x2-inch slides provide visiting parents with interesting and realistic pictures of many aspects of the present school program.

When Mrs. Jones sees a projected picture of her child happily engaged in some worth-while endeavor, she usually becomes less critical of today's curriculum; indeed, she often becomes one of the school's most avid boosters. The teacher who has a collection of these colored slides will seldom be at a loss when the PTA asks her to speak at the next meeting or when visiting night for parents is arranged.

Superintendent Glen Barks of the New Albany-Floyd County Consolidated School Corporation is credited with a novel idea for utilizing slides in school-community relations. For some years his teachers have been encouraged to photograph activities undertaken by their pupils while on field trips. The slides are then shown by means of an automatic rear-view pro-

jector. When projected in a downtown bank or store window, they attract the attention of shoppers and businessmen and provide a quick overview of an interesting aspect of modern education in action.

A recent innovation has made the production of 3 $\frac{1}{4}$ x4-inch photographic slides an activity every teacher can learn in a matter of minutes. The Polaroid Company recently released a new film for use in their Land Camera. This film makes it possible to snap a picture, let it develop inside the camera, lift out the positive transparency, place it in a small container which hardens the film emulsion, mount the transparency in the slide mount provided, and project it within three or four minutes after taking the picture.

The teacher who has learned to produce and use slides to document class activities can be unusually effective in interpreting his part of the school program.

Another type of visual becoming increasingly accepted for presentation of pictures, diagrams, and statistics related to school affairs is the transparency for use on the overhead projector. This can be either a large piece of positive or negative photographic film or a piece of transparent acetate upon which teachers can write or trace with transparent inks. Its size can vary from 5x5 inches to 10x10 inches depending upon the size of the projector, and either black and white or colored transparencies can be prepared.

## Transparencies' Advantages

Certain special advantages of these transparencies, coupled with the use of the overhead projector include: (1) the user can face his audience; (2) the projector can be operated easily by the user from the front of the room; (3) the projected image is of such intensity that it can be seen clearly by large audiences even when some auditorium house lights are on; and (4) the user can draw upon the transparency with a ceramic pencil as he develops

his point. These marks can be erased easily and the transparency used again at a later time.

Several Indiana administrators have used transparencies advantageously in presenting school needs to board members and the public. Superintendent Cyrus Gunn had special transparencies made for talks to the people of Martinsville. In one instance, existing school buildings were located on a transparent photographic map of the district. Then dots were entered on this transparency to show the number and location of each family with children who either were or would soon be of school age.

Mr. Gunn's method proved to be highly effective in visualizing to board members and lay groups just which families the existing schools were serving presently, and what future school buildings should be anticipated and planned for by the community. By projecting this map on a screen via the overhead projector, Mr. Gunn was assured that all members of his audience could see clearly the illustrations he had prepared and thus understand better his presentation.

# program

**By DR. JOHN MOLDSTAD**  
Assistant Professor of Education  
and Assistant in Research,  
Audio-Visual Center, Indiana University

In other instances, school officials have used overhead transparencies in talks to large groups to show school buildings with cracked walls, broken light and plumbing fixtures, and impossible physical education locker and shower room facilities. These projected pictures vividly documented the actual situation and were evaluated by the users as invaluable media for motivating needed school changes.

Statistics such as population trends, teachers' salaries, and budget breakdowns lend themselves to visualization in this way.

## Television—Education's Friend

Two years ago at the Indiana Governor's Conference, Donald H. Clark, then state budget director, utilized transparencies and the overhead projector to present the activities and statistics related to the operation of his department. This method of presentation seemed so well accepted that at the 1956 Conference six out of 10 department representatives utilized it.

Within a surprisingly short number

*William Pucell, Lake County superintendent, uses the overhead projector while explaining four ways a school building program may be financed.*

*Superintendent Alex Jardine appeared on television to explain the methods of teaching reading currently being used by South Bend teachers.*

*Mrs. Vanhook of Bloomington's McCalla School (left) prepares to record a class activity with 35 mm. color film. Later (right) she shows the slides she took in the classroom to a group of visiting parents.*

## Short movies and filmstrips are excellent for civic club presentations

of years, television has come to the forefront as perhaps our most effective and efficient method of getting the public's attention. Various audience studies reveal that the average adult is spending more time watching television than with all other mass media combined. Too few school administrators have attempted to utilize this media to interpret their school program. Many ask, "But how can we get time on a commercial television station? We haven't school funds to spend like that!"

The manager of a commercial television station has an obligation to the community. According to Federal Communication Commission regulations, he is licensed to broadcast on a frequency or channel belonging to the people of the United States. A condition of his license is that he must operate in the "public convenience, interest and necessity." Most television managers have a high sense of public responsibility. If contacted well in advance of the desired program date, they usually are happy to provide free time and assistance to the schools in their locality.

For example, several years ago the general public became quite alarmed as a result of books and articles challenging present methods of teaching reading. Dr. Rudolph Flesch and other authors claimed that present-day school children could not read adequately. In anticipation of the effect these articles which were appearing in the local papers might have on South Bend citizens, Superintendent Alex Jardine secured time on a local television station to discuss methods of teaching reading currently being employed by their teachers. He also presented evidence that South Bend youngsters are better readers today than they have ever been.

In some communities commercial television personnel have cooperated with schools to the extent that they have provided portable equipment and special wiring hookups to telecast in individual schools. In this way, on-the-spot documentation of actual classroom activities has been provided.

These are but a few ways television can be utilized to get the school's message to the public.

Within recent years almost every school administrator has had the challenging task of planning a drive for increased tax levies to meet mounting

operating costs, increased salaries, and new building needs. The importance of success in drives of this nature is obvious as is also the desirability of using every mass media available to inform and motivate the voters. Slides, overhead transparencies, and television can each make a contribution.

### Filmstrips and Movies

Frequently, however, an integrated sequence of pictures which can tell the school's story is needed. In 1955 the Cincinnati Citizens' Committee for the School Levy had just such a need. They were searching for a medium of communication which could alert the people to the accomplishments and impending need of their schools. A second criteria was that the medium should be capable of presenting the message without primary dependence upon an accompanying lecturer. A color filmstrip with a reading script seemed best suited for the campaign.

Working with school officials and educational leaders in the community, the Committee developed a content outline and shooting script which covered the ideas they felt should be presented to the public. Since the filmstrip was to be shown to thousands of Cincinnati residents, they decided to hire a commercial company specializing in filmstrip production to do the photography. Careful planning by the committee made it possible to keep the total cost down. The final product consisted of an 18-frame color filmstrip and accompanying script.

According to plan, each community and civic organization was asked for 10 minutes of their meeting time. A member of the committee projected the filmstrip and read the accompanying script. If desired, a short discussion followed; but in many cases the film-

strip alone conveyed the entire message.

The school tax levy passed with surprising ease, and much of the success of the campaign was attributed to the filmstrip, which seemed very effective in informing the citizens of the issues and motivating them to support this needed tax increase.

The unique ability to document for posterity important school events and to record dramatically and forcefully the actions, activities and personalities of pupils and faculty makes the motion picture, on occasion, an indispensable medium for school-community relations.

In most cases films depicting local school events have been produced by teachers with training in motion picture production or by local film enthusiasts who have demonstrated "know-how" as well as enthusiasm.

A wide variety of school topics seem to justify the cost and effort associated with film making. Films prepared to orient new teachers or new pupils to school personnel, facilities, and special services and requirements have proven their worth.

Several Indiana schools have made films presenting objectives, activities, facilities, and benefits of special departments such as industrial arts, home economics, agriculture, athletics, etc. Through these films, many who normally would not take the time and effort to visit the programs receive a condensed but realistic picture of what they are all about.

Administrators who must tour the country each spring in search of new teachers would undoubtedly find a motion picture portraying their school system and the community of considerable value in recruiting.

Each of the visual materials referred to in this article has unique characteristics as well as certain limitations as campaign media. Carefully prepared and properly used, they can individually or collectively aid in fostering understanding and insight concerning one of the community's most important institutions — its schools.

exist with each of the above "tigers" quite satisfactorily. This includes the arrangement of such important items as budget, staff, facilities, and administrative support.

## FLASHfilm

(Continued from page 71)

will not have a safe driver. The Philip's Junior High student body enthusiastically felt that the tachistoscopic FLASHfilm method had added an important 3rd dimension to their driver education.

The tachistoscopic FLASHfilm method was started by Klapmeier and Kuluvar in 1952 and at that time just one picture was being flashed and the entire emphasis was on improving reaction time and not judgment. Then in 1953, Klapmeier conceived the idea of two picture series . . . with the first picture not to be flashed but to be shown for a full and long study. This was the break-through that made a new kind of method for safety education.

A two-picture series of twenty-five situations was developed in 1954 and shown to a University of Minnesota class of driver training instructors. The men were enthusiastic, but they suggested that the pictures, which were in black and white, would be more effective in color. In the fall of 1955 a preliminary color strip was ready for demonstration. It was shown to the National Safety Council President, Ned Dearborn, and his staff. Dearborn was impressed and asked for a full-scale demonstration of it to be given at the 1956 meeting of the National Safety Congress. As a result, a full course of 160 actual driving situations was prepared that show virtually all the important driving conditions.

This series was organized into "kit" form by Safety Education Films which is now distributing this complete course to the driver education instructors of the country. This new and revolutionary method promises to be a dramatic advancement to aid in eliminating the number one killer on the highways—**POOR JUDGMENT.**

Could there possibly be an analogy between the story of "Little Black Sambo" and the present struggle for power among specialists in: instructional materials, librarianship, audio-visual instruction, and radio-television?

Each group can be, and sometimes is, a veritable tiger. Each item of Little Black Sambo's clothing could symbolize any one of the marvelous tools of communication available to us as teachers. In some sections of the country right now each group has claimed or is claiming each and every tool as its very own domain and responsibility.

Now the writer is not so naive as to think that power struggles are never necessary and in some cases even very beneficial—*BUT*—let us hope that this present struggle doesn't become so widespread and bitter that we become more engrossed in chasing each other around the tree than in the main job of teaching. That job, in his opinion at least, is a constant search for ways to improve the communication of ideas from teacher to student and vice versa.

Our main target is the student. Is he to stand around in the cold while we fight over his "clothes"? Isn't it even within the realm of possibility that some new and entirely different power group could come and pick up the whole "outfit" while we are chasing each other around with much growling?

Let us ask ourselves some questions:

1. Is it absolutely necessary to have *one* "boss" per se?
2. Is this business of what title you give the "boss" so terribly important?
3. Won't it vary from locality to locality?
4. Doesn't it often depend upon the source of the real leadership?
5. Is it possible that all could work together—one tiger with another?
6. Isn't a lot of the trouble caused by rather petty jealousies?

Maybe the writer has been living a sheltered life (or has been extremely fortunate in the jobs he has had), but, so far at least, he hasn't found it impossible to co-

# STICK 'EM UP!

by George P. Salen  
Associate Professor of Education  
Purdue University  
Lafayette, Indiana

**S**TICK 'em up and down they come!! How discouraging to come to your classroom early in the morning only to discover your newly designed bulletin board partially decorating the floor. What a disappointment for the busy teacher, and it's quite understandable why we all become discouraged and soon discontinue the efforts toward making our walls and bulletin boards attractive.

But you might be the more determined person, and so you use a large quantity of adhesive to make sure the pictures won't fall down. Fine, but what happens when the day comes when you want to replace the display? In most cases more than a few prized possessions are torn or otherwise made unusable for future classes. Then, too, have you noticed the unsightly smudge left on the wall? Irritating indeed can be the seemingly simple task of securing objects with the above mentioned headaches.

A simple solution used by a majority of teachers is to purchase large thumb tacks and use them indiscriminately. Yes, they'll hold the objects tightly and are comparatively easy to remove when not needed. This seems to be a solution, for only a few pin holes show the signs of use. That's right, but have you ever stood back and looked objectively at your display? What kind of a geometric design have you made with all the colors and sizes of thumb tacks? Does your eye actually go toward the interesting pictures displayed or toward the many colored tacks? Too often the latter is true, and so your display, although in place and easily removed, is lost in the complicated maze of the geometric pattern holding it.

Commercial artists are adept at displaying materials in a simple and neat fashion. As a result today's students are accustomed to seeing these and we teachers must aim for that subtle effective touch in our displays if we are going to command the attention of our youngsters. Let's be practical now and talk for awhile about easy available methods we can use to make our pictures stay up without the unattractive disadvantages of regular paste, transparent tape and thumb tacks.

One manufactured product is a box of individually wrapped sticks of a waxlike substance. A teacher need only pull off a small piece of one of the sticks and apply it to the back of the picture to be put on the bulletin board. Then by applying a slight pressure to the spots where the wax is located the picture will stay where placed. One big advantage of this product is that it will adhere to any material such as brick, wood, plaster, and many other materials with the exception of glass. When removing the picture it can easily be pulled off the wall and the wax rubbed off of the back of the paper. If a bit of the adhesive remains on the wall, it can be removed readily by scraping. The product is reusable so save it for the next time. Heavy as well as light objects can be mounted in this manner and the fun in trying third dimensional effects is unlimited. Put this product on your supply list, and you'll use it for many things. The product is "Bulletin Board Styx" and it is manufactured by the Lea A-V Service Company in Albert Lea, Minnesota.

Have you ever used a stapler that can be swung clear of its base? The advantages of being able to use this

stapler against walls, on ceilings, as well as on cardboard boxes, etc., are too numerous to mention. True, the material must be semi-soft in order that the staples will hold, but on suitable bulletin boards it has the desirable effect of mounting materials neatly and securely with little effort. You'll find the investment in a heavy duty stapler with the ability to swing off its base a handy useful tool. Removing of materials put up with this method is simplified with a regular stapler remover or by the use of the pointed end of a letter opener.

Another inexpensive method of mounting light weight papers is a product known as Stick-Tacks. These Stick-Tacks are small discs made of a translucent material that adheres both to the back of the mounting and to the wall. They are available in two sizes largest of which is about the size of a dime. This material is not as permanent as some other adhesives, but is very satisfactory for the usual classroom papers needed to be hung. A package of eighty-two of these can be purchased at your drug store for twenty-five cents. The lack of any mess when mounting plus the small envelope to be stored are additional reasons for using this method.

One mounting technique that has become popular in the last few years is the use of different types of tapes. There are several different kinds of tapes on the market. The most inexpensive is known as "masking tape" and can be purchased at some drug stores and most paint stores. It comes in a roll varying from  $\frac{3}{4}$  inch to several inches in width. It is a light weight inexpensive tape and is available only in a light tan color. Placed

evenly around a picture and particularly on the wall, it will serve as an attractive border as well as an adherent to the mounting board. Where many papers are to be mounted for one time only and where cost is a factor and color is not, this technique proves to be invaluable. Unfortunately, as with most tapes, the removal of the tape from the picture or paper often leads to some destruction of the picture. It removes, however, very easily from the bulletin board and is ideal for use on window glass and black boards.

In addition to the above mentioned tape, there is a commercial tape known as "Mystic Tape." It is a heavier product than masking tape and it comes in a variety of colors and widths. The cost is greater, but the effects that can be created with it are unlimited. Careful consideration of the colors used and the amount of tape put on one bulletin board should be studied. Too much of any of this type of decorative tape can detract rather than add to the subject content presented. Used in moderation and with good design and eye appeal in mind, this can prove to be an attention-getting device.

For variety in displays try using a tack board in strategic places around the classroom. These are soft wood strips about  $\frac{5}{8}$  inches thick and approximately  $1\frac{1}{2}$  or 2 inches wide. They can be inexpensively painted the same color as the wall or contrast them with a pleasing shade. Have these tack boards permanently mounted on the wall. There can be just one small one in a special area or an entire room can be encircled. They are tacked parallel to the floor and at an easy eye height for the seated students. Placing one narrow strip of this moulding-like board about a third or half way up the walls is a very inexpensive but useful way of supplying the teacher who enjoys having many areas of interest created in her room. Any of the fore-mentioned tacking materials can readily be used and in addition all kinds of pins, gums, pastes, etc. are easily attached to these tack boards. Try one, and I think you'll find it helpful.

A comparatively new product on the market called Peg Board can also be helpful to teachers in displaying materials in an unusual manner. The board is made of masonite and through it holes have been bored approximately an inch apart over the entire surface of the board. This creates a geometric pattern of rows and rows of tiny holes. Securing materials to the board can be accomplished in different ways as there are available specially designed holders, clips, and pins that are easily slipped into any of the holes. The ability to place heavy objects on it is

also possible by first securing a shelf or shelves on the peg board. If yours is a problem of displaying objects rather than papers, procure more data on this peg board method of exhibiting. It will enable you to eliminate some valuable table display space by having the objects on the wall. Contact your local lumber yard for more details or write to the Demco Library Supplies at Madison 3, Wisconsin. An additional advantage is that these peg boards come in a variety of sizes and colors to meet your needs.

All of the methods so far discussed have been ways of securing materials directly to a bulletin board or wall. Let us consider for awhile techniques one can use to first mount the picture on poster board or construction paper. As a substitute for glue or paste, I recommend three types of products for this purpose. Let us take a close look at these types and examine the advantages of each. Keep in mind the previously mentioned products that can be used for the securing of the mounted picture to the wall.

The use of a glue-like material known as rubber cement is gaining favor because when mounting a picture on construction paper it will not warp as is often true when using paste or glue. Another unique feature of rubber cement is that one can mount permanently or temporarily. In the latter method the picture can be taken off the construction paper at any time in the future. This temporary process is accomplished by putting rubber cement on the back of a picture and immediately placing it on the cardboard or construction paper. To gain a permanent mounting with rubber cement one applies the cement both to the back of the picture and to the area where it will be placed. The rubber cement on both areas is then allowed to dry independently. When dry the picture is placed on the other area and pressure is applied to the middle part first and then to the outer edges. Care must be taken in a permanent mounting to be certain the picture is in the correct position the first time as it will be impossible to remove the picture after the two are once together. If before applying the cement one will make small markings where the corners of the picture are to be held, it will facilitate exact picture placement. Any excess cement having come in contact with the front of the picture or mounting will readily rub off when dry.

Another method used to mount pictures is to use an adhesive known as Tri-Tex. It has many of the qualities of rubber cement except that the adhesive cannot dry out before securing

the picture to the mount. If the picture is secured immediately upon application of this paste-like material, the mount will remain secure for an indefinite period. Tri-Tex can be used to secure pictures without a mounting to a blackboard and will leave no tell-tale mark when removed. This paste then can readily make black boards into bulletin boards without damaging in the slightest manner the usefulness of the board for writing.

Before closing this subject of techniques for better mounting one should not overlook the possibilities of the use of a dry mounting tissue. This is a thin sheet of paper upon which has been applied a coat of cement to each side of the sheet. In mounting, a sheet of tissue is placed between the picture and the mounting board and heat is applied to the top surface by means of an iron. The heat melts the adhesive causing the picture to adhere to the mount. Any photography store stocks the various sizes of tissue. While the tissue is slightly more expensive than the usual adhesive, the expense may be cut down by strip or spot mounting. It does offer, when done properly, a very professional appearing piece of work.

It is hoped that some of the materials suggested will add to your ability to produce neater and more professional looking bulletin boards and walls. Enhancing your displays will create more student interest and give you a keen sense of an effort well done. You will be pleased, too, when the day, week, or month after you put your display on the wall, you will still find it in the original spot in neat order. Then and only then will you realize you have learned the art to "stick 'em up" where and for the length of time you desire.

"I got one of the girls from sewing class to help me thread this film."

# The Best in Closed-Circuit TV

**See for yourself! Don't settle for any closed-circuit television until you've seen how completely the GPL/NTS Team answers all your school needs!**

**You'll see** GPL equipment — finest in the field! Closed-circuit television that has *had* to be the best to achieve its pre-eminent position in military, broadcast, and industrial TV!

**You'll get** the quality that made GPL equipment the inevitable choice for front-page "firsts" in closed-circuit programs — the Salute to Eisenhower Dinners, which linked 52 cities — the Heart Video-Clinic, viewed by 35,000 medical specialists — the General Motors Motorama, celebrating its 50 millionth car — the nationwide theatre broadcasts of heavyweight championship fights.

**GPL leadership** in designing TV for direct instruction, teacher training, magnification, and other special needs has made it the first choice for pioneering educational TV installations at over 30 schools and universities.\* 90% of the nation's educational TV stations using video recorders are also GPL-equipped.

**GPL equipment** is simple to operate, versatile, surprisingly inexpensive. There's a full line of closed-circuit equipment to fit the needs of a single school or an entire school system.

**National Theatre Supply Company**, a prominent supplier of projection and auditorium equipment for schools, has teamed up with GPL to assume complete responsibility for all your School TV needs.

\*Details on request.

Branches in principal cities

Both are member companies of the highly respected GPE Group.

**Call** on the Educational Television Division of NTS for free demonstration in your school of how this GPL/NTS set-up answers all your needs. A national network of company offices — the largest nationwide sales and service organization offering TV equipment for schools — brings an NTS representative as close as your telephone!

**Technically trained** and with over 30 years of experience in field service, your NTS representative is qualified to help you at every step in choosing, installing, and maintaining your closed-circuit TV.

**He will** sit down with you, your school committee, or your architect, to discuss the preliminary requirements of a TV installation. He will give you practical advice on the selection of the right equipment. He will take full responsibility for delivery and installation, financing if required. He will follow through by instructing teachers and students in its everyday use.

**Maintenance** is no problem with NTS! Parts and service are promptly available anywhere in the United States. Your NTS representative is steeped in the tradition of "the show must go on," so he stands ready to help in any emergency — anywhere — at any hour of the day or night.

*The GPL/NTS Team...*

**1. FIRST MEETING** with NTS representative is discussion of school's problems. He shows GPL equipment, describes operation.

**2. GPL CLASSROOM CAMERA** gives all students front-row seats at science, laboratory and other demonstrations.

**3. GPL VIEW-FINDER** camera, for studio or classroom use. Makes it easy to follow every move made by the instructor. Light and compact, it draws little current. Plugs into ordinary electrical outlet.

**4. BRIGHT, WALL-SIZE TV PROJECTOR** lets 1,000 people watch broadcasts picked up "off the air," or closed-circuit programs, in school auditoriums or in large multi-purpose rooms.

**5. SINGLE-UNIT CAMERA** (GPL "500") has built-in controls. You can add accessories to expand system as your school's needs increase.

**6. INSTRUCTING** students to operate GPL equipment, NTS man explains how to use view-finder camera. Depend on him for service any time, anywhere.

For free demonstration or more information, write or phone collect to Mr. H. Barnett, Director, Educational Television Products Division, National Theatre Supply Company, 92 Gold Street, New York 38, N. Y.; BEekman 3-4170.

*...a single source for all your TV needs.*

# Church department - continued

## A Unique Achievement

(Continued from page 69)

the nationwide network of preview and evaluation committees which now appear in the pages of the INTERNATIONAL JOURNAL. This Fourth Edition will cost \$10.00 and be available *only* from the Department of Audio-Visual and Broadcast Education of the National Council of Churches (257 Fourth Ave., N. Y. 10).

Ideally, the workers in every church need a copy of the AVRG. They need it to tell them what is available on certain subjects and in certain areas. They need it because they can't preview every film they would use, and every filmstrip they would purchase. Here they can find evaluations to guide them. Not ivory tower estimates of content and utility, but down-to-earth evaluations by people who, like themselves, work at the job of education in the local church.

And, while these ought to be enough reasons to motivate the wise church leader, space alone keeps me from giving many more!

—W.S.H.

## READERS RESPONSE TO FILMSTRIP ART

A good many letters came in on my November 1957 article "Filmstrip Art," encouraging me greatly, and, suggesting that filmstrip makers and filmstrip artists be invited to send in their comments on the subject, either pro or con on the article. Below are paragraphs from letters, together with several short articles that got in ahead of the deadline. They deserve serious consideration. We are grateful indeed to those who took the time to write.

—W.S.H.

### From a Filmstrip Artist

I couldn't agree with you more in what you said about filmstrip art in your department in the November issue. It is a good thing for someone to bring out those points. More than a series of fine drawings is required to do the special job required of filmstrips. A background of some experience in visual aids would be of great value.

Not all the fault lies with the artist, however. Sometimes a script arrives with far too many frames, and showing no possibility of any action what-

ever. It is difficult to get much variety when, in frame after frame, the subjects are doing similar things. It takes a lot of ingenuity to overcome this static quality. We do try, though. This fault, moreover, is not confined to one producer.

—*Esther R. Bell*  
*Free-Lance Artist*  
*230 N. Monroe St., Media, Pa.*

### A Filmstrip Editor Speaks Up

Mr. Hockman's article (Nov. 1957) pointed out several areas in which filmstrip art could be improved. It is true that many filmstrips contain art which falls short in such matters as psychological correspondence to text, and graphic emphasis in important elements of what should be communicated. And, there is no denying that the pictorial is more important than the verbal part of a filmstrip, as important as the latter is.

Hockman is right in saying, "... the filmstrip of the future will more and more be made by those who know how to exploit its full possibilities as a medium of communication." It would seem that superior filmstrips will be made (as they have always been made) on the basis of careful, imaginative planning.

This is not to say that the part of the artist in carrying out the plan is unimportant. But, if he is given layouts that have been planned well, he will be able to do a better job. It is an economic fact that the amount of time a filmstrip artist can spend on one picture is quite limited.

It is possible that a great many deficiencies of filmstrip art are the result of hasty and inadequate planning. The filmstrip producer (through positive direction) must play a more creative role in pictorial planning. At present, a great deal of this function is left with the author and the artist. The author invariably is much more concerned with the verbal part of the script, and the artist is lucky if he has enough time to simply execute the pictorial ideas, let alone plan it.

The filmstrip producer should plan each picture, just as the art department of an advertising agency plans an ad. This would require additional expense for skilled direction, but this would be offset by greater efficiency (less time and money wasted on revisions) and by the rewards from having produced something superior.

I do not intend to give the impression that the artist is to be ex-

cluded from planning. The more he can collaborate on this, the better. But, he simply cannot afford to give much time in this phase of the picture-making.

There is no doubt that the filmstrip industry can always use good artists. And, perhaps, filmstrip art can be taught in the art schools. However, I believe that the greatest chance of improving lies in there being more positive art direction on the staff of the producer.

—*George E. Gillespie, Jr.*  
*Editorial Department, SVE*

### Comments from an Educator

I enjoyed reading the article on Filmstrip Art and wish this kind of thinking could be in bold face on the front cover!

You are so right! What you find to be true of the religious filmstrip is also true of the school variety. And, many of the comments made with regard to the filmstrip can be carried over to the narrated educational motion picture as well.

Since most educators seem to use a single set of criteria in evaluating books, movies, filmstrips, records, and almost every teaching aid (authentic? accurate? up-to-date? suitable vocabulary level? related to curricular objectives?), it is probably not surprising to find so many producers making filmstrips, films, and other materials without paying much attention to the unique teaching properties of particular mediums.

When we educators stop trying to "fit everything in," and spend a little more time deciding *why* we should try to fit them in, we'll be able to get the attention of the producers. Your article is a splendid step in that direction.

—*Robert E. Schreiber*  
*Northern Illinois University*  
*DeKalb, Ill.*

### From an A-V Library Proprietor

I have read, with much interest, your article on filmstrip art. I agree heartily. I have been thoroughly disappointed with much of the art in filmstrips, and in many cases, with the scripts.

I have a further feeling, which goes beyond what you say: That there will never be satisfactory picturization of our religious themes in our filmstrips unless we have Christian illustrators who basically understand the Christian message. . . . It is not enough merely

to train illustrators. It is necessary to have people who are living the Christian life first and foremost, and then they will be able to illustrate our filmstrips adequately. (If they also have the skill of mind and hand required, wouldn't you add?—WSH)

What you say about art is borne out in the experience of our customers. Very few people want filmstrips with drawn illustrations. They want filmstrips with live actors. I think they sense the difference, without definitely saying it in so many words.

However, I feel that drawn pictures could be even better than the pictures of live actors if the attitudes which they wish to teach were adequately expressed in the pictures. An illustrator can accentuate these attitudes in a way that avoids many of the limitations of (live) human faces and figures.

—Wilbur E. Laganke  
Church School Pictures, Inc.  
Cleveland 14, Ohio

### Art Editor Disagrees

In general I feel that Mr. Hockman's article is very sound and challenges all of us who produce educational filmstrips to try even harder in our endeavor to educate through vision, supported by sound, rather than the reverse of this.

The visualization of a filmstrip passes through several hands, or minds, before it actually is put on paper by the illustrator. In working as a group, rather than as individuals, we try to clarify the plan for each frame before it reaches the illustrator.

It is true that most illustrators come to us untrained in the area of filmstrip art, and if it were not for their patience in endeavoring to change their thinking and to make use of their abilities toward our needs, we would produce fewer good filmstrips than we do now.

Effort is constantly being made to make filmstrip art communicate more and more clearly . . . , and I feel that when we succeed in this that it is NOT, as Mr. Hockman stated, ". . . more by accident than design."

—Lillian B. Wuerfel  
Art Editor

### Editor Illuminates Subject

I cannot speak with any authority. This is a new field for me. . . . I have just spent over three and a half years in educational TV. This, also, is a form of visual art. For the most part, we think in terms of words first. There are exceptions. In the ad lib TV shows, such as wrestling or panel shows, the visual is first.

The TV or motion picture camera can direct the attention of the viewer

to an over-all scene (long shot) or closeup of any number of items. This subjective camera sees only what the director wants the viewer to see.

Subjective camera, in this sense, can also be used in filmstrip art. The editor can determine just what the viewer is supposed to see—be it wide shot or closeup.

However, another idea enters here—*motivation*. In movement, such as in TV, every shot should have motivation. Somewhere in the sweep of action there is a "peak of action," the point at which the story (or action) reaches the place where it is purposeful (reason for motion).

In our still pictures, when we are telling a story, we strive to get that one picture which "tells the story"; that captures the key play; that explains the reason for the whole thing.

It seems that good filmstrip art would adhere to these principles as well. Each picture should advance the story; should be motivated; contain just what the editor wants the viewer to see; and cause the eye to be directed to the object or action in point.

I do not know the answer to many questions. I would like to find them, however:

1. Just how much weight should the visual be given against the aural? Should the sound simply reinforce the picture; add more information; explain the picture, or what? Should the picture do likewise? Just what is the balance between them?

2. Should filmstrip art be planned for the slowest or the quickest mind in the group? (Can the picture contain subtle things that will not bother the slow mind, but will be of interest to the smartest one?)

3. Why am I bored by much filmstrip art I see? For instance, the filmstrip. *The Living Word*, put out by the Presbyterian USA, uses the same frame several times in a row. Is this good? If so, why? What about repeating frames?

4. Should we be satisfied with second rate art? (Who is to say what is first or second rate art?) Or, should we strive to bring a sense of the "masters" of art in our work?

—Weldon Johnson  
Protestant Religious Editor

### Wants Hockman's Ideas Visualized

I have had a chance to digest "Filmstrip Art" and I certainly agree with the general point of view that you present. After I read the article, this thought occurred to me: How many pictures does he actually use in his columns to illustrate the points which he so ably tries to verbalize! (Will the publisher please note this?—WSH)

## "IN REMEMBRANCE OF ME"

Make this a memorable Easter. The great message of redemption and love can be as real for congregations today as when Jesus walked the dusty roads of Palestine. Make it come alive with dramatic motion pictures which portray the climactic final days of Christ's ministry on earth. Ask for the "Living Bible" Series.

Completely planned worship programs available in booklet form.

AND see the powerful message of Easter applied to modern-day living in:

### MIRACLE OF LOVE

"Eternal life begins here and now."

I think your article would have been a hundred percent more meaningful to me, and your readers in general, if you could have utilized a picture or two to illustrate the points that you were trying to make.

Perhaps your verbalisms like "color dominance" and "optical dynamics" would be much more understandable if these characteristics could be illustrated. How helpful it would be to us and to your readers to specifically get some ideas, in picture form, that would illustrate the "bit of the future" which you now sometimes find in a good filmstrip. (And here he offers us glossies from SVE filmstrips.—WSH)

In conclusion, I want to express my appreciation again for your fine article, Filmstrip Art. Any one who attempts to thoughtfully consider problems relative to the medium that is dear to our heart deserves our heartfelt praise.

—Walter E. Johnson  
Vice President and Educational  
Director, SVE

## Comments on the News

There are holes in the Iron Curtain! This time it is filmstrips that are getting through—into East Germany, into Czechoslovakia, and into Yugoslavia. According to Cathedral Films, Inc., of Burbank, Calif., there is a decided upswing in orders from beyond the Curtain as well as from overseas generally. This is good. Can some church, or churchman, see a way to widen the hole, or, set up the flow of helpful A-V materials? Perhaps the World Council of Churches will come up with an idea on this.

—o—

The churches can now buy filmstrips direct from the Society for Visual Education (1345 Diversey Parkway, Chicago 14) under a new policy inaugurated several months ago. Of course a church can still place its order with the A-V dealer of its choice. Many churches will welcome this change. Their first move ought to be to get SVE's catalogue of religious filmstrips and slides. Their next move ought to be to study it carefully. After that the A-V leader in the church, whoever he happens to be, ought to go over this catalogue with the leaders of the various departments of the church school, the youth, and the adult groups. Of course, this should include the pastor, who is called upon to furnish program ideas and advice, and who needs to know, in a general way, the extent and the quality of visual resources now available to his leaders.

—o—

"Reflections From Green Lake" is a 107-page mimeographed and bound

volume "preserving" the main presentations and major findings of the 14th International Audio-Visual Conference held last September at the American Baptist Assembly on Green Lake in Wisconsin. In the words of the editor, "This is a document which will require careful reading and study. Within it are many provocative statements and ideas" . . . which will benefit the individual or group giving this document serious study and consideration. It contains Noel Evans' opening address; prepared statements on the five basic issues considered, plus a transcription of the taped recordings of the panel discussion of these questions; together with succinct reports of the findings and recommendations of the eight seminars, work and interest groups. This is the best summation of critical and exploratory A-V thought in the church field now available, and for only \$1.00 (while they last!) from the Department of Audio-Visual and Broadcast Education, NCC, 257 Fourth Ave., N. Y. 10.

—o—

One sentence in the release by Cathedral Films, Inc. announcing its filmstrip series on the Old Testament prophets catches the eye and quickens the imagination: "The purpose of the series will be to place the prophets in their correct historical settings, and show their importance to an understanding of God." This is a laudable objective. It places the accent where it belongs. We have had filmstrips which gave the prophets no context at all, and some that got the context out of kilter. Cathedral is setting a high objective for itself. We hope it can be reached. It is high time some real scholarship shows up in our O.T. A-V materials. Let us hope the church will appreciate more scholarly material. These filmstrips are to be in both B&W and color; have a utilization time of 15 minutes; contain 40 odd frames each; have recorded commentaries with dialogue, sound effects and orchestral background music.

—o—

The mission study themes for the year beginning the fall of 1958 will be: The Middle East (overseas) and North American Neighbors (home). Motion pictures on each theme are in production by the Broadcasting and Film Commission of the NCC, with *Land of Allah* as the working title of one. Now is the time for the church to make careful note of films and filmstrips bearing on these two subjects, as well as for film libraries serving the churches to plan to meet the needs of the churches next fall and winter.

## A Technique for Little People

If you know how, using filmstrips with the little people of the church can be a lot of fun (and learning) for them and a joy for you.

The trick is to give up the notion that you must wring all the educational juice out of a filmstrip the first time, and to accept the idea that you can use it several times for a definite purpose each time.

May I illustrate: *Sunday Around the World* (Methodist production; try your A-V dealer or your denominational book store) is a good and useful color filmstrip with a rich pictorial content. With adults, you might explore in full the meanings in each of its beautiful frames. With children—little people of the Kindergarten and Primary—you certainly would not.

What you could do, and ought to do, is concentrate on just one aspect of its content: The various ways people travel to get to church, would be one. Another aspect could easily be the kinds of church buildings people have. It may have other areas of meaning which could be explored.

Now, of course, you will need to prepare your children for these filmstrip experiences. You will need to

make them ready to see what you want them to see, and to think what you want them to think. And, you will do this by concentrating their little minds on a certain aspect of the filmstrip and by your informal narration as the pictures are shown.

To be clear on this, let me suggest the little "readiness speeches" a teacher could use; first for the travel aspect:

*"Children, when I came to church this morning, I rode in a car. How did you come? (She will get some answers.) Did any one walk? (Answers, again.) Did any one come by boat? (This will get smiles; laughs.) Did any one ride a donkey? (Laughter again.) I know it seems funny, but this very morning some people did go to church by boat, and some did ride a donkey. As we look at our pictures this morning we will see people traveling to church in all kinds of ways. How many ways will you see? How many ways will you remember? After we see our pictures we will talk about what we saw."*

Now the filmstrip would be shown, with the leader giving an informal narration which would center primarily in the purpose she has for this experience: seeing ways of travel.

To enhance interest and to motivate learning, the wise teacher will be

interested and learn something. For her it will be a learning experience just as she wants it to be for the child. How can she do this? Simple enough! She will, from time to time, admit her interest—by the tension of her voice, and by what she says. She can say what's new to her; what she never thought of before; what she hopes to remember. It's easy once you get on to it.

And the teacher will skip right along with the showing. No lingering now, with a central, specific objective. Since you are not wringing all the juice out at once, you won't need to twist half so hard or long! For Primary children, my top is 10 minutes. For Kindergarten children, seven or eight is enough.

What kind of "readiness" for the kinds-of-churches objective? It could go something like this:

*"Children, . . . as I came into the church this morning I noticed that it was made of bricks. I guess I had almost forgotten what our church looked like. Are all churches the same? (Now ask about a neighboring church.) People everywhere have churches. Are they all alike? Would you like to see some pictures this morning which show many kinds of churches? As we look at our pictures,*

## Wherever It Must Go

# WHEELIT

## requires less effort to get it there!!

Non-folding Wheelit No. 4102

Useful for transportation and stationary use of projection equipment, books, typewriters and all kinds of school supplies. Balances load perfectly on rear wheels.

Wheelit, the new combination transportation and projection table, takes anything heavy such as typewriters, adding machines, books and projection equipment anywhere . . . quicker, easier and safer . . . upstairs or down, around sharp corners, down long corridors, over curbs and other changing levels.

### THE 49 TO 1 CHOICE OF CALIFORNIA CO-ORDINATORS

In a recent demonstration of competitive makes, audio-visual co-ordinators from 50 California schools voted overwhelmingly for Wheelit (49 to 1) and filled out evaluation sheets, stating their reasons.

They particularly liked its easy steering, the large pneumatic-tired rear wheels and rubber-tied casters in front, the large Formica-top platforms of thick, sound-absorbing wood, the lack of vibration, and the convenient foot brake for stationary positioning during film projections.

### WHEELIT — DON'T CARRY IT!

WHEELITS have a load capacity up to 300 pounds, heavy web straps to secure loads, spacious platforms conveniently located 14 and 41 inches above floor level. Your WHEELIT makes heavy lifting and fatiguing carries unnecessary.

See Your Audio-Visual or School Supply Dealer or write us for descriptive literature and prices.

## GRUBER PRODUCTS CO.

Folding Wheelit No. C-402

Folds compactly for storage in limited areas or fits easily into auto trunk

compartment. Keeps load in perfect balance on stairways or curbs, as illustrated above.

### Precision-built . . . to last!

The all-steel construction (except platforms) and precision workmanship insure smooth, efficient operation and many years of satisfactory service. There's nothing to go wrong . . . no maintenance or repair service, when you own a WHEELIT.

PHOTO ARTS, 962E Salisbury Ct., Lancaster, Pa.

let us see how many kinds of churches there are. After we have seen our pictures, we will talk about what we saw. I hope I can remember all the kinds of churches I'm going to see. How about you? Are you ready?"

Again, not having to plow the whole field in one trip, she can concentrate on the one furrow of learning she hopes to turn over smoothly. Again, from beginning to end, this must be for the teacher a learning as well as a teaching experience.

And, if I had three guesses as to why the teachers of little people so often fail to teach, I would lay all three on the fact that they forget to learn along with the child. The teacher's own learning, her own delight in new ideas, etc., is a powerful catalytic in the teaching-learning situation. How sad when we get too old, too tired, too familiar with our subject matter, to be excited about it any more! No wonder our children don't learn more, are not more excited about school; more powerfully motivated!

We would do well to look to our attitudes and to our techniques. Unless both are right, we shall be fanning the air; keeping school, but not teaching.

Of course, we need filmstrips tailored to the needs of small people. Making the most of present filmstrips, however, makes a lot of sense to me while we wait for the better ones.

Again, let us get over the idea that any recorded commentary is always better than the one we can cook up for ourselves. Indeed, tailoring a narration to our children's needs and at the same time pruning it closely to our specific objective, is not beyond the skill of many teachers of little children if they will but try.—WSH.

**Inter-faith Marriages**

"Is there a motion picture which I can show to the young people of the church which will present fairly the hazards of mixed marriages?" This is the type of question I have been getting over the years from youth leaders. "Is there a film that presents the difficulties that can and do arise when Protestants marry Roman Catholics? I am searching for a film I can use with young people and their parents." This represents the inquiries I've been getting from clergymen.

Now the answer can be Yes—*Mixed Marriage*, a 30-minute dramatic, color film produced by and available from the Pro-Ca Information Center, 629 E. Allens Lane, Philadelphia 19, Pa. It presents the story of Mabel and Bob. She is Roman Catholic; he is Protestant. Both are devout. To be married at all, Bob takes instruction by the

priest, and reluctantly signs the prenuptial contract concerning the baptism and education of the children. Deeply in love with each other, both young people underestimate the possibility of crucial differences, which do arise. In seeking guidance, Bob goes to a Protestant pastor. As the film closes, it looks as if their marriage can be saved—if the pastor's sound advice is followed. (Rental \$14.00.)

A sequel to the above is the 28-minute film, *The Two Shall Be One*, showing the experiences of Bob and Mabel as they rescue their marriage from conflict and tension and establish a one-faith home by Mabel gradually coming to accept the faith of her husband. (Rental \$13.00.) Highly recommended for the two uses mentioned above if the user will make careful and adequate preparation. In every instance ample time should be scheduled for follow-up discussion which should be under competent leadership.

**New Easter Film**

The producer, Concordia Films, describes its 1958 Easter film *He Lives*, in these words: "A story from modern life which has been designed to dramatically illustrate the great significance of Christ's resurrection and the joy and comfort it brings to all believers." This is a film for believers. It will comfort the faithful. If it has a weakness it would be in that it will not seem very convincing to the skeptic and the once-a-year church-goer. This reviewer found the acting not quite matching the emotional tensions which the tragic death of a teenage son would bring to his family. A little directorial nodding here, perhaps! A useful film, despite blemishes. (Color \$22.50; B&W \$13.50; 30 minutes; from Concordia Films, 3558 S. Jefferson Ave., St. Louis 18, Mo.)

**A Church Wakes Up**

Did you ever see a down-town church wake up and get to work at being a church? In the 28-minute color film, *Train of Action*, you can see this very thing happen, sparked by the bringing of a displaced family into the midst of the congregation. Plausible, interesting, and informative all the way, this film shows what can happen when a church becomes truly concerned about persons (all colors) as a result of a quickening of its faith. Recommended for congregations, down-town, urban, and suburban; for official boards awake or dozing; for pastors' institutes and seminars; and for family nights, and the meetings of adult church groups. (From Evangelical and

Reformed Church, 1505 Race Street, Philadelphia 2, Pa.; rental \$12.00)

## Outer Space

Moody Bible Institute is sponsoring a "Science Adventure" series of short (12 to 15 minutes) color films for use with boys and girls of Junior age. *Wonders Above* is one of the six thus far released. It shows Uncle Bob answering the questions of two youngsters about the moon and the sun and the stars. He shows as well as tells, and in the second half of the film we look into outer space via the amazing photography of the big telescope of the Mt. Wilson observatory. This film relates science and religion by making God the ultimate reference for both. (From Film Department, Moody Bible Institute, 820 N. LaSalle St., Chicago 10, Ill.; 13 minutes; rental \$6.00)

## Eskimo Film

Walt Disney's "True-Life Adventure" sound and color motion pictures have been appreciated and used by church leaders. From what we see in *The Alaskan Eskimo*, the first in his "People and Places" series of shorter films, they too will be appreciated and widely used. They will be used in many different ways in the church—youth groups; young adult clubs; men's dinners; family nights; children's parties; Scout groups, and other clubs. Structured to show as well as tell, this film gives us an intimate view of family and community living and work—through spring, short summer, and long winter. The photography is good and the narration interesting and instructive. (Color; from Ideal Pictures, Coronet Building, Chicago 1, Ill.; 27 minutes; Rental \$10.00)

## Filmstrip Notes

*A. D. 29* is a 50-frame art filmstrip in full color by Christian Education Press (1505 Race Street, Philadelphia 2, Pa.). It deals with the thoughts and feelings of the disciples on Saturday and Sunday after the crucifixion of their Master. We go from one to the other and find them questioning, bewildered, grieving—feeling that their Master's mission had come to naught. Then came Sunday, restoring hope, quickening their memories, and energizing their wills. Now they have a mission; a message to tell.

In this filmstrip the continuity is not straight-line. It often flashes back, following the memory of a disciple. The script is lean on words, and the user would do well to practice reading the commentary to get the right pace and

# Syracuse University PROGRAMS IN RELIGION

rhythm for full effect. It has two versions—Carolyn Goddard's for children; Oscar J. Rumpf's for adults.

The art work, by Harold Minton, is of a superior variety in the reviewer's opinion. Satisfactory all the way, some of his frames have outstanding merit for dynamic and balanced composition (as in Frame 25: Woman Wiping Jesus' Feet); for naturalness of body postures and gestures (as in Frame 10, James Leaning Against Wall); for facial delineation (as in Frames 30 and 31, Thomas and Philip); for his choice and balance of colors (as in Frames 25, 23, 17 and others); and for his skill in rendering the texture, drape, and color of clothing (as can be seen in frame after frame, especially in Frames 21, 27, 45). Frame 45 (two disciples at Emmaus) is a summary of Minton's competencies mentioned above, including a skillful handling of light and a sure brush on hands and facial details.

While this filmstrip can be effectively used in the upper departments of the church school, its best use will probably be with young people and adults in the context of worship and inspiration.

## Use Christmas Filmstrips Any Time

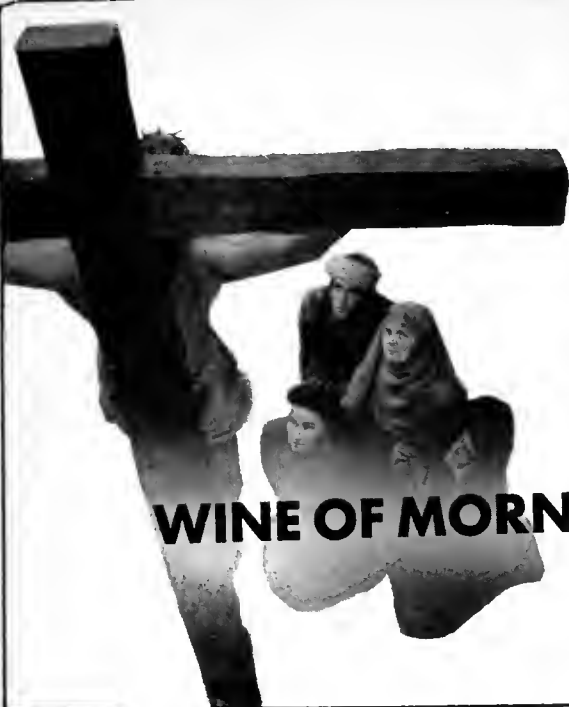

How sad it is that so much of our fine A-V material sits there on the shelves until the right date comes around. This is the plight of Christmas filmstrips in 99 churches out of a hundred. It need not be that way, however.

Take that new series, "Christmas With World Neighbors," by SVE. Here are four good and useful titles—*Christ-*

*mas in Norway, Christmas in Germany, Christmas in England, Christmas in Mexico*—which most people will use in the usual ways during the Christmas season and then set aside for the next eleven months.

I don't think we need to do that. While made to show and tell about Christmas in other lands—the customs and traditions in home, school, church, and community—they can be made to tell about God and His great human family. This is especially true for Grade Two and down. I know that some timid souls, experts with children, don't think we should use projected pictures with little people. I don't agree. I do agree that all who don't know should leave them alone. But, know-how is compounded of three things, that any one can get: common sense, some experience, and a little educational imagination. How can you tell little people how big and wonderful God's human family really is? How can you awaken in the child a growing understanding of the differences and likeness there are among the peoples of the world? I can take any of these four filmstrips and move toward these two objectives a reasonable distance with Kindergarten children and those a little older.

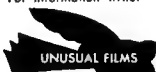

Just look, I have a ready-made context—Christmas. Every child knows about his Christmas, in home and church. That's my starting point, my apperceptive bump (if not a mass yet!). Now it is no trouble at all to go on from there: We have Christmas, they have Christmas, we are alike; we are different; but we all have the same Heavenly Father.

*Spectacular  
Brilliant Color  
Screen play*

The story of a man  
whose destiny was entwined  
with the life  
and the death  
of the Son of God

## WINE OF MORNING

For information write:  
  
UNUSUAL FILMS  
BOB JONES UNIVERSITY  
GREENVILLE, SOUTH CAROLINA

And I can do this in ten minutes, respecting thus the attention span of these little folks. I can get them to talk, and wonder, and think, and that's the stuff of learning. How do I know this? I've seen it done, and I have done it myself. If I can do it, you can, too.

Of course I would use these four filmstrips as the producer primarily intended. Obviously, they are lesson enrichment material for Third Graders and up. Just as obviously they are useful then and at other times to promote world friendship and understanding—if we can get ourselves out of a self-created rut and see them as such.

The photography was done in these four countries at Christmas 1956. The commentary is nicely narrated on LP records by Frank Babcock. Via the organ we hear native carols and folk songs. In the recordings we have a new frame-advance signal—four chime notes played on a celesta that harmonize with the music, are easy to follow in keeping pictures and narration synchronized. (Color; complete set boxed with two records, \$27.50; each with record, \$9.00; each with reading script, \$6.00)

### Series Completed

With the release of Part IV, Cathedral brings to completion its 24-unit filmstrip series, *The Story of Jesus*. The titles of Part IV are:

- Triumphal Entry and Cleansing of the Temple
- The Passover Supper and Betrayal
- The Trial
- The Crucifixion
- Resurrection

### The Upper Room

Here we have new and valuable resources for teaching and worship in all seasons of the year and in relation to the curricula of all our churches. Part IV will be especially appreciated by pastors and others looking for material around which they can build Lenten and Easter meetings.

The commentary for these filmstrips has been LP recorded in two versions—one for teaching and the other for worship and general use. The instructional version has a printed "Teachers' Study Guide" which gives the commentary plus excellent notes in another column which the teacher will find of great value in his total preparation.

In the words of the Master Study Guide for this series, "is to be utilized as resource material for established curricula, and not as a substitute for a curriculum. It would be improper, moreover, to exhibit these soundstrips without the context necessary for the best educational use of any audio-visual materials." (Inquire of your A-V dealer or write to Cathedral Films, Burbank 6, Calif.)

### Christmas Filmstrip

Now is the time to think of next Christmas, and the time to make note of new resources (which you might not have seen or been able to use this past Christmas).

*The Blessings of the Christ Child*, a color filmstrip produced by Concordia Films, is a new approach to the Christmas story, highlighting in four parts the blessings of Jesus' birth to all man-

kind. The commentary is LP recorded: one side for general use, the other for children. Both are nicely narrated by Frank Eschen. Several stanzas of three carols come on the screen, with Barbara Benson, soprano, singing them beautifully. The utilization time is about 15 minutes. There is a leader's guide and commentary; and, for those who desire it, there is a complete worship service utilizing this filmstrip. (Without the recording, \$5.00; with it, \$8.00; order from C. F., 3558 S. Jefferson Ave., St. Louis, Mo.)

### Bird Film for Children

If you are looking for an 11-minute bird film in lovely color to show to your Primary children, I recommend *The Red-Winged Blackbird*. It shows the seasonal migrations, habits, and habitat of this lovely bird, giving plenty of close-ups of nest-making, of birds hatching, and of little birds being fed. The wise user will run the film as a silent, giving her own commentary and thus setting the whole experience in just the religious context she desires. (From Coronet Films, Coronet Building, Chicago 1, Ill.)

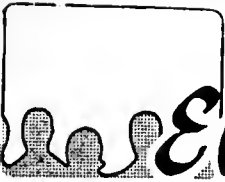

### WHAT ABOUT COLOR?

We'd like to tack another\* thesis to the A-V barndoor this month: Color isn't worth its cost in a lot of films and filmstrips now produced for the church field.

Present production seems to be governed by the assumption that a *film* must be in color if it is to be good; and, that a *filmstrip* must be in color to be any good at all. What lies back of this questionable assumption? Have we proved that black and white films are no good? Hardly! One needs only to recall the British St. Paul film series, which to this very day have not been surpassed, if equalled for authentic power. Have we looked at the content of our films and decided in the light of cold psychological analysis that color is of essence in every film?

Many films should be shot in color. We think it is of essence in some instances, and of no significant relevance in others. We believe that producers should distinguish between the two. But, how can they? The producer, skimpy on fundamentals and radar-sensitive to what he thinks his potential customers demand, insists on color and eschews all advice. Thus, we have the A-V landscape cluttered with films where the use of color increases price and rental rates without increasing utility and effectiveness.

When you ask the producer why he shoots everything in color he seldom can make a better case for it than to say the client wants it.

## EARTHWORMS

(Pat Dowling, 1056 South Robertson Boulevard, Los Angeles 35, California) 11 minutes, 16mm, sound, color, 1957. \$100.

### Description

The film presents facts and general information about earthworms with explanations by the narrator.

The beginning shots of a boy and a girl with an earthworm and a montage of scenes showing grass, flowers, farm crops, and trees visualize the information being given by the narrator that earthworms are busy, helpful creatures found in nearly every yard and garden, benefiting everyone as they help to improve the soil in which they live and thereby help in the growth of plants.

Close-up photography of a cross-section sample of the earth gives an enlarged view of an earthworm moving along one of the many tunnels. A scene using white arcs to represent the vibrations caused underground by a boy walking on the surface is followed by a close-up of an earthworm moving deeper into the tunnels in reaction to the vibrations it feels but can not hear (it has no ears). Reaction to strong light, which it does not have eyes to see, is demonstrated as the earthworm begins to bury itself in the rather loose surface soil. The narration explains that strong sunlight tends to dry out the moist skin of earthworms and thus eventually kill them. They usually come out only at night or, as the film shows, during a heavy rain when their tunnels are flooded. Then they can be seen on sidewalks or on the surface of the ground.

To demonstrate that most soils contain food for earthworms, a scene shows bits of leaves and partially rotted plant roots and stems being picked out from the soil. The film had

explained previously that earthworms actually eat their way through the earth leaving tunnels. A diagram using pop-on labels and simulated movement next illustrates the passage of unchewed food from the narrow mouth of the earthworm, where it enters, through the long throat to the crop for a short-time storage, then to the gizzard where it is churned and ground into a pulp before going into the intestine to be further digested by bodily juices. The narrator later explains that castings, the material passed from the earthworm's body, help to enrich the soil in which the earthworm lives.

A close-up of an earthworm moving through a cut-away tunnel against a strong light demonstrates the film's explanation that the earthworm's body is especially adapted to its life in the narrow underground tunnels. It shows that the skin or outer tube of the earthworm is composed of expansible rings and that its internal organs are strong yet very flexible.

Another important result of earthworm activities is demonstrated in the scene showing that soil, honeycombed with tunnels, can easily be crumbled and the sequence demonstrating that water, representing rain, runs off hard ground more quickly than off ground where earthworms have been at work making the soil more porous and forming tunnels through which the water enters to flow deeper into the soil.

The film shows some earthworm cocoons being uncovered in the soil, explains that the eggs in the cocoons usually hatch in about a month, and illustrates that cocoons unhatched when the first winter snow falls lie dormant and then hatch in the spring. In one scene a new earthworm is emerging from its cocoon.

The conclusion mentions other animals and phenomena which benefit the soil.

### Appraisal

Although most students are aware that earthworms exist, their general knowledge of them is usually limited to the fact that they live underground and when dug up or found can be used as fishing bait. After seeing this film the reaction of students should be more intelligent and appreciative. The earthworm will have become an interesting or more interesting creature when it is considered as a kind of ani-

mal and beneficial to man. The film presents its facts clearly and in an interesting manner. The visuals and terms used in the narration are easily understood. Use of several close-up scenes, cut-away sections of earth, earthworms carrying on their normal activities, the diagram, and the experiment with water, contributes to the realism of the film. The principal audience for his film will be elementary science classes studying about earthworms in particular, the development of soil, conservation, or animals beneficial to man. Such classes could be encouraged through use of the film to try their own experiments and investigations, to find out about raising earthworms for commercial purposes, or to develop an interest leading into study of one of the other areas mentioned above. A second- or third-grade teacher could use the film to satisfy the curiosity of her students concerning the structure and activities of earthworms. From the visuals and narration they could gather general understandings suitable for their level. Junior-high-school science classes could also use the film as one aspect of information in an area of study similar to the suggestions for the elementary classes but on a broader scope and a higher level of understanding.

—Margie Gonca

## NOT BY CHANCE

(National Education Association, Division of Press and Radio Relations, 1201 16th Street, N.W., Washington 6, D. C.) 28 minutes, 16mm, sound, color or black and white, 1957. \$275 or \$175. Produced by Agrafilms, Inc.

### Description

NOT BY CHANCE is developed around the theme that good teachers are the result of carefully planned teacher-education programs rather than "by chance" occurrences.

Betsy Mayburn, a good teacher, is first shown as she works with pupils in a number of school situations. The film notes the qualities that make Betsy a good teacher including her knowledge of how to help children learn and her ability to work with them day after day. In answer to the question, "How did Betsy Mayburn become a good teacher?" the film turns to one of the twelve hundred authorized colleges and universities that each year are training professional

teachers. Here, Donna Morgan is seen as she enters the Admissions Office of the college she has chosen to attend.

A command of subject matter, physical fitness, mental alertness, a pleasing voice, and a warm, out-going personality are important to producing good teachers. As for all applicants, Donna's high school academic, activity, and personality records are carefully evaluated. Also, like other young men and women who are planning to attend college, Donna takes the entrance exams which are helpful in selecting and classifying potential teachers. She is given a physical examination, and her speaking voice is checked for intelligibility, warmth, versatility and depth.

Because Donna has selected science as her major subject, her studies in college are concentrated in the biological and physical science areas. However, she also studies history, English, languages, economics, psychology, and mathematics. Through all these courses, Donna gains subject-matter knowledge so necessary to good teaching. Scenes of Donna in a government and science class show her observing the different teaching methods used by her college instructors. This awareness of teaching methods is the first step toward becoming a teacher. Donna also observes good teaching and pur-

posefully planned lessons in the laboratory school. Here, too, she sees the way a teacher handles junior-high-school boys and girls, who, in the process of growing up, exhibit such adolescence traits as restlessness and emotional instability.

Then, a series of scenes shows Donna in situations that provide her with other essentials for good teaching. She presents, for discussion and evaluation, a lesson plan she has prepared. She takes part in a closed-circuit television program dealing with the many audiovisual instructional materials. In a small group discussion, she and other teachers-in-training discuss with an instructor the ways teachers can continue to grow professionally through traveling, taking courses in the summer, reading professional magazines, and being active in professional organizations. She observes and works with children in the use of diagnostic techniques that are necessary to an understanding of children and their needs. She goes on a field trip with a colleague and a group of children. Here, she experiences, for the first time, the need to restrain her fears, thus putting into practice one of the principles she has learned about working with children, that of not passing on to them her own fears and prejudices. Donna also recognizes the value of library re-

sources and the need to be able to use them easily. As she is shown attending a football game, the film points out that taking part in the social activities on the campus is a part of each young person's college life.

Finally, as a senior, Donna is shown in a real teaching situation under the guidance of a skilled, competent, supervising teacher. The junior high school in which Donna will teach is new—evidence, the film points out, that the people in this school community care about children's education. The supervising teacher, Mr. Adams, has a wealth of instructional materials which he uses effectively in his teaching, thus justifying the planning, hopes, and money the community has provided for a good school. In this student-teaching situation, Donna experiences "real" teaching.

The first day, Mr. Adams gives her a seating chart and invites her to observe classroom activities for a few days so that she will get the "feel" of the pupils and the class situation. That evening, he introduces her to the PTA. The next morning, he discovers Donna in the classroom sitting at his desk. Noting the concern and anxiety written on her face, he talks about his own feelings as a student teacher and gives her his lesson plans for the day. For Donna, these lesson plans serve as a bridge linking the instruction she has had in her various methods courses to this "real" teaching situation. Her confidence is partially restored. This confidence grows as she notes in Mr. Adams' teaching other applications of the things she has learned about children and teaching methods.

Later in the semester, the all important day arrives—the day when Donna conducts the class herself. With a carefully thought-out lesson plan, she introduces the day's discussion and proceeds with the class instruction. Mr. Adams, noting how well she is handling the situation, quietly leaves the room. As the film leaves Donna with the class, the narrator notes that she is on the way to becoming a good teacher, growing in her profession—the result of an educational program which has given her a command of her subject matter and a sound understanding of how children learn.

Concluding scenes show pictures of men, such as Lincoln and Washington, and scenes of libraries, classrooms, children, and teachers, including Betsy Mayburn, as the film emphasizes that men of great vision for years have worked to bring to reality free public schools because they have realized how fundamental education is to a democratic way of life.

## THE FILM YOU'VE ASKED FOR

# BULLETIN BOARDS... an effective teaching device

This film gives suggestions for the planning and organization of creatively designed bulletin boards. Twelve different bulletin boards are used to provide a variety of examples. The collection of different materials illustrated could be used to create interesting backgrounds for any type of display. The film also takes you into a classroom where children and teacher are discussing and planning a bulletin board. Then it shows the children arranging one. Anyone interested in bulletin boards who needs inspiration and motivation will want to use *Bulletin Boards: an Effective Teaching Device*. It can be used with students at any level from elementary through high school and college, and for pre-service and in-service teacher training.

### BAILEY FILMS, INC.

6509 DE LONGPRE AVE. HOLLYWOOD 28, CALIF.

## Appraisal

Carefully chosen scenes, giving authenticity and reality to classrooms, teachers, students, and children, and a well-written commentary present the story of a teacher-training program in an interesting and informative manner. Whether the audience is a lay or professional one, the viewer should come away convinced that good teachers are the result of rich experiences provided by a teacher-training program. The emphasis given to Donna's acquiring a subject-matter competency may help to answer current criticisms that teacher education programs are more concerned with methods of teaching than with subject-matter knowledge. The presentation of courses dealing with learning about children and about teaching methods is interpreted in terms of sound teaching principles. For professional groups, composed of either teachers-in-training or of teachers-in-service, the film points out a teacher's responsibility for being a *good teacher* through such statements as children deserve good teachers and teachers make use of resources provided by the school community. No lay audience should miss the responsibility the film places on the public for providing schools equipped with materials and facilities which contribute to children's learning.

—Beryl B. Blain

## SIX-, SEVEN-, AND EIGHT-YEAR-OLDS — SOCIETY OF CHILDREN

(New York University Film Library, Press Annex Building, 26 Washington Place, New York 3, New York) 30 minutes, 16mm. sound, black and white, 1957. S135. Produced by Vassar College.

### Description

This film presents unrehearsed visuals and sound of the behavior of six-, seven-, and eight-year-old children.

It opens by telling that children's rules and traditions have changed little over the generations and emphasizes this by comparing the play activities of present-day children with those depicted in a sixteenth century painting by Peter Brueghel.

The film continues by explaining that the regulations and rituals of the six-, seven-, and eight-year-olds are precise; they must be "just so"; they will not be tampered with. Examples of this are shown in scenes of children "choosing sides," "counting out," playing "hopscotch," "hide and seek," and "giant step." These rules are also shown to be allied to children's superstition — "step on a crack and break

your back" and "hold your breath when you cross a bridge."

Next, the film points out that in these early school years, group cohesion and a feeling of belonging are very strong desires which lead to the later "gang age." This strong identification with a group is partly a compensation for the tensions created by the breaking away from grownups — a characteristic of this age. Further, there is a cleavage of sexes which not only results in ostracism of the opposite sex but, at times, open rebellion.

These are also ages of secrets. The film shows the secret clubs, the hide-outs, and explains that the doing of things as part of a group gives children a feeling of elation. It goes on to say, however, that this freedom from grownup control also results in anxiety; the children do not feel quite safe. Also, they look up to the older children and will work and suffer to reach goals of verbal and physical achievement.

The unrehearsed scenes of the children continue as the narrator explains that at this age there is a powerful drive to acquire skills and a knowledge of the world about them. Scenes of children in school indicate that not only can the study of their physical and biological environment be made a gratifying and interesting experience

but also the study of the three "R's" as well.

Concluding scenes explain that by the time the child is eight years old, he is committed to a group, has detached himself from his parents, and has become a citizen in his own children's world, working hard to master skills and himself.

## Appraisal

The evaluation committee feels that this is an excellent presentation of the results obtained by eavesdropping with a camera and a sound recorder on groups of six-, seven-, and eight-year-olds. The spontaneous and unrehearsed atmosphere of the film is gratifying, interesting, and revealing. It is the third part of *Long Time To Grow* in the Vassar Studies of Normal Personality Development film series and should be useful to psychologists, teachers, prospective teachers, parents, social workers, and others interested in child development. It will be helpful in presenting certain facts and generalizations concerning this age group of children and also as a discussion stimulant. Each point made is effectively illustrated by visuals of children's activities accompanied by narration, "live" sound, or music which is based mostly on children's songs.

—George Vuke

# SOUND advice

about audio materials  
and equipment

by **MAX U. BILDERSEE**

There is a continuing trickle of recordings based on religious material and much of it is worthy of the attention of the casual listener, the library and the school. Many prominent names in literature and in the theatre are associated proudly with such presentations, not the least of whom are Sholem Asch and Charles Laughton and these men add their dignity to the field of biblical interpretation.

This in no wise infers that these artists are interested in forcing attention on the Bible in schools. It is more than likely that each would rise vociferously to defend the public schools as well as the private and parochial schools in their right to make independent decisions in this area. Indeed, as a liberal philosopher, Mr. Asch has frequently risen to the point of importance of the separation of church and state in governmental matters and surely would carry this philosophy through to public education. But each individual has the right and the responsibility to study these matters as an individual and to take a stand in the matter of the relation of the school to bible stories.

Sholem Asch labored diligently and was widely acclaimed for his interpretation of Old Testament bible stories which was published by G. P. Putnam's Sons under the title "In the Beginning." His imaginative approach to the stories and his sympathetic understanding of children and their needs were exemplified in this publication meant for childhood reading. This offered no bombast, no "fire and brimstone" but rather the feeling of comfort and the feeling that these were stories to be heard and read in wonder and in pleasure.

Sholem Asch's son, Moe Asch, who has offered much to the field of audio education, has brought life and solidity to several of the bible stories as they are published in spoken form under the FOLKWAYS title. The

younger Mr. Asch through this label which is his, has taken full advantage of his knowledge of his father's intent and has maintained this purpose in these recordings.

### In the Beginning

Two "IN THE BEGINNING" recordings are reported here. The first uses the book title ("IN THE BEGINNING," Folkways Records, one 10 inch 33.3 rpm microgroove recording, No. FP 105) and logically commences with the story of "Adam." Herein briefly is told the story of the creation of man beginning "God had already made heaven and earth, . . ." This continues through the creation of the first man, and the naming of the animals. The story "Eve" begins, as it should, "But Adam was very sad and lonesome because he was obliged to live utterly alone."

And thereafter is related the simple story of the creation of Eve from the rib of Adam who, as the story gently concludes, "was greatly astonished at this, but he nevertheless was heartily pleased with his own wife; he took her by the hand and went with her through the wide world."

Arna Bontemps narrates this recording and carries forward the concept of gentility and simplicity. Here are no undue histrionics but rather magnificent emphasis is attained through quiet tones and gentle pauses which pinpoint essential turns of the stories. The delivery is superb in that it contributes eloquently to the atmosphere of serenity and beauty created by the words. The producer should be mentioned here, too, for resisting the easy temptation of interpolating dramatic incident supported by Mr. Bontemps' superb narration. By retaining the simplicity of straight narrative beauty is added to the recordings.

"In the Beginning" continues through the well known stories of "Noah and His Ark," "The Tower of

Babel," "Abraham," and "How Abraham Came to Know God." Each of these is done with the same grace, and this recording can be rated as "excellent" from every standpoint. Elementary school children will enjoy hearing these stories told as stories without effort to identify them with particular religious sect, form of worship, or belief. Yet these can be adapted by religious bodies for study in parochial institutions or in denominational Sunday Schools such as are supported by many congregations.

### Joseph and His Brothers

The recording above will be especially pleasurable listening to children in the first three grades. And as is so often true of such unusual audio materials, adults will be enchanted by this as well as by "JOSEPH AND HIS BROTHERS" (Folkways Records, one 10 inch 33.3 rpm microgroove recording, No. FP 106).

"Joseph and His Brothers" is a story familiar to all of us. This recording carries the Old Testament story through from the introduction of Joseph, his brothers and his father to Joseph's self re-introduction to his brothers. Here are told the stories of "Joseph and His Brothers," "Joseph in Egypt," "Joseph in Prison," "Joseph is Made Ruler Over Egypt," "The Brothers in Egypt," "The Return of the Brothers to Canaan," "Benjamin in Egypt," and "Joseph Makes Himself Known to His Brothers." The entire record is devoted to the one story, and the same virtues of creative writing and delicate interpretive reading recorded for "In the Beginning" apply to this disc.

Utilization of these two recordings in schools can be spread gently over several listening periods almost on the same thesis as a continued story. Such serial presentation cannot injure the listening pleasure and can add to the enchantment of the children with the stories presented.

Here, a word of gentle caution. Regardless of the purity of motive of the teacher, regardless of the excellence of the recorded material, regardless of the genuine interest of the children in the story for the story's sake there is the possibility that such presentation will be misunderstood by some parents. It is wise therefore for the teacher planning to use such material to carefully audit the records in company with fellow teachers, supervisors, administrators and where possible, a lay committee including parents and representatives of religious bodies. Such planned pre-audit in a calm situation will contribute to acceptance and will slay the dragon of prejudice be-

**THERE'S A WILL TO LEARN**

WITH **Ekotape<sup>®</sup>**

Young minds grasp and absorb more readily, take to all subjects with greater interest when Ekotape is used in the classroom. Teachers find it makes their efforts more rewarding and efficient — in music, speech, mathematics, foreign languages and many other subjects.

Ekotape is a precision instrument designed for portable use, casual handling. Easy to record and play back — even for younger students. Crisp, clear high fidelity tone, wide volume range.

Important too, Ekotape is priced to fit in the most modest school budget. Write for Bulletin R10F5, or —

fore it can emerge. It is far easier to avert wrath than to overcome it.

### Charles Laughton Reading

So, too, the recording "CHARLES LAUGHTON READING FROM THE BIBLE" (Decca Records, one 12 inch, 33.3 rpm microgroove recording, No. DL 8031) should be community accepted before it is used in a school accepting children of many faiths. This, too, is an excellent recording, with the script taken directly from the Bible. Charles Laughton extends his excellence as a narrative and poetic reader in this performance. He reads with simple brilliance four well known portions of the Old Testament, "Garden of Eden," "The Fiery Furnace," "Noah's Ark," and "David and Goliath." Louis Untermeyer, writing

of this recording reported that Laughton brings to it scholarship and enthusiastic vigor in interpretation. Untermeyer says, "He combines dramatic power with true scholarship. Instead of declaiming the words as though they were overfamiliar texts, Laughton re-animates them with fervor and profound passion—the result of years of intensive study—and reads them as they were a new experience, almost as though they had never been read before. He brings a fresh interest and understanding to the narratives which have always been inspiring but which now take on renewed life and power."

These readings are more mature than those earlier reported and can best be used in junior and senior high school classes and with college groups,

particularly where the study of Ethics is undertaken.

### The Living Talmud

Students of Ethics, and other mature adults will profit from hearing "THE LIVING TALMUD" (Mentor Records, one 12 inch 33.3 rpm microgroove recording, No. 12-A-2). The material of this recording is adapted from the book of the same name by Judah Goldin who delivers the commentary. Judah Goldin's background includes association with the University of Iowa as Associate Professor of Religion, visiting Professor of Jewish Literature and History at Duke University and his present association at the Seminary College of the Jewish Theological Seminary of America where he is Dean and Associate Professor of Agada.

The recording deals in scholarly fashion with the question, "What is the Talmud?" and explains that the Talmud embraces not only law and legal argument, but legends, folklore, ethical and philosophical speculation, homilies, parables and historical reminiscence—a rich expression of the human imagination responding to the universe in anguish and in awe.

Included in the recording are selections from the translation of *Pirke Abot* and the Classical Commentaries. There is discussion of the language of *Pirke Abot* and selections read from it in the original Hebrew. "Pirke Abot, The Wisdom of the Fathers," is a unique treatise of the Talmud. In every generation, Talmud students examined the text of "Pirke Abot," commented on it sentence by sentence and clause by clause and sometimes even word by word. They drew on the interpretations of their predecessors and added something of their own. Thus it is a constantly fresh treatment of and for each generation.

In this reading from his brilliant new translation of "Pirke Abot" and the selections from the classical commentaries, Judah Goldin has deftly illuminated for a modern audience the depth and character of Jewish spiritual and intellectual concern.

This superior recording will be worthy addition to public library collections, private collections and should be found in every college library boasting a broad collection of materials for study and studious documentation.

*Records for review should be sent to Max U. Bildessee, 36 Holmes Dale, Albany 3, N. Y.*

## SINGLE SUBJECT FILMSTRIPS

"THE BEE SOCIETY," Visual Education Consultants, Madison 4, Wisconsin. Filmstrip is in black and white. Grade range—Intermediate and Upper. Subject area—Natural Science. 26 Frames.

This filmstrip shows how bees live together in a mass of about 30,000 to 75,000 bees in a colony. The three inhabitants, the queen, drone and the worker, are shown as they develop other bees according to the type of food fed to the eggs. The workers gather food, nurse babies, and fan the hive to keep it cool. The workers live rather short lives while the drone bee mates the queen bee who lays one or two thousand eggs a day. There is only one queen bee in a colony which produces honey and beeswax.

This filmstrip would be interesting to show as a science lesson and gives fine opportunities for questions. The activities of the bees may be compared to the every day actions and chores of people who live together in our modern cities. The subject was well presented to make the material interesting to the viewer.

## PRIMARY SCIENCE SERIES

Encyclopedia Britannica Films, Inc., 1141 Wilmette Avenue, Wilmette, Illinois. Filmstrips are in color. Grade level includes third and fourth grades. Subject area includes natural and physical science. Set includes six filmstrips each consisting of approximately 48 frames as follows:

NIGHT AND DAY  
THE SEASONS  
OUR WEATHER  
THE AIR  
THE EARTH  
THE NIGHT SKY

This series is an excellent science series to use with second, third, or fourth grade science units. Helpful discussion and review questions at the end of each strip and suggestions for further pupil activity make this series very useful for the classroom teacher. Captions for the frames are well within the linguistic attainments of a third

grader and effectively contribute to the understanding of the pictorial story. The colorful drawings superbly illustrate science concepts in a very meaningful manner.

## FARM FATHER SERIES - I

Long Film Slide Service, 7505 Fairmount Avenue, El Cerrito 8, California. Filmstrips are in color. Grade level includes primary grades. Reading level of captions is on first and second grade level. Subject area includes social studies and natural science. Set includes five filmstrips.

MY DAD IS A DAIRY FARMER (32 Frames). The filmstrip includes two very valuable frames at the beginning of the strip. One tells the teacher how the strip can be used with the class, namely, for study of different farms, the work farmers do, food and clothing studies, and plant and animal material. The other frame shows the vocabulary words that will be needed for viewing the strip. These words are printed in large letters for the students to study before viewing the strip. The list includes nine vocabulary words.

The children are introduced to Jim, an eight year old boy, and his dog. Jim takes the viewer around his father's dairy farm and explains the tasks that are required to run the farm. Color photographs show how cows eat and drink, and the treatment and training for baby calves. Activities at milking time are reviewed including modern methods of milking and the stressing of cleanliness around the machines and in the treatment of milk for the market. The filmstrip ends with review of vocabulary words and review questions for the classroom.

MY DAD IS A TRUCK FARMER (37 Frames). Filmstrip begins with a list of eleven words for vocabulary study for this strip. The viewers are introduced to Penny, a farm girl and her cat, Tiger. She tells how the soil on her father's farm is prepared for planting twelve different vegetables which are pictured in excellent color photographs. The manifold duties of the truck farmer are explained by showing the growing of the vegetables and hoeing of weeds and telling when the vegetables are ready for market. Types of vegetables are illustrated (root, stem, fruit, leaf, etc., type of vegetables) and methods of harvesting these vegetables are shown along with transport to the city market. Vocabulary review is included with test questions.

Other filmstrips in the series are: MY DAD IS A COTTON FARMER (34 Frames); MY DAD IS A FRUIT FARMER (34 Frames), and MY DAD IS A WHEAT FARMER (33 Frames).

All above filmstrips make excellent use of good teaching practices and would lend themselves well as supplementary materials for a variety of teaching units.

## SYLVANIA CERAMIC BLUE TOP

PROJECTION LAMPS... for all makes . . . all types . . . in all sizes

Use a Sylvania Ceramic Blue Top in your projector . . . your slides and movies deserve the best!

New Sylvania Ceramic Blue Tops are available in all standard sizes for any projector . . . to fill your exact requirements for clear, brilliant projection.

**Blue Tops offer these superior qualities:**

**Brighter** . . . Ceramic Blue Tops won't scratch, chip or peel like ordinary painted tops . . . machine-made filaments assure pictures bright as life.

**Cooler** . . . Ceramic Blue Top is bonded to the glass for improved heat dissipation . . . cooler operation assures longer lamp life.

Spring 1958 Issue now available — 25c. Meston's Travels, Inc. Dept. F, 3801 N. Piedras Street, El Paso, Texas.

# Check these 10 points in selecting 16 mm sound projectors

QUESTION	WHY THIS IS IMPORTANT
1 Does it have color-coded threading?	<input type="checkbox"/> Makes threading and operating fast and simple, even for beginners.
2 Does it have safety film trips?	<input type="checkbox"/> Stops film movement instantly in case of film emergency. Guards against costly film damage.
3 Does it have Hi-Lite optical system?	<input type="checkbox"/> In connection with Mark II shutter, throws 38% more light on the screen. Assures bright pictures even in hard-to-darken rooms.
4 Does it have stationary sound drum?	<input type="checkbox"/> Assures clear, smooth sound. Has no moving parts to get out of adjustment. Scans full
5 Does it have visible one-spot oil system?	<input type="checkbox"/> Transparent filling tube shows oil level. Reservoir automatically feeds oil to all points as needed.
6 Are both reels mounted on top of projector?	<input type="checkbox"/> No overhanging reels to present a "traffic hazard." Projector can be set up on any level surface, even the floor.
7 Does it have single drive sprocket?	<input type="checkbox"/> Eases film stress, because same sprocket controls film entering and leaving projector.
8 Does it have compensating film shoes?	<input type="checkbox"/> Automatically adjust themselves to varying film thicknesses. Guard against splices catching.
9 Does it have 180° swing-out lens?	<input type="checkbox"/> Facilitates threading and cleaning of both aperture and film channel.
10 Is it adaptable for magnetic recording?	<input type="checkbox"/> Complete magnetic recording on film and playback can be added at any time by simply connecting Victor Magnesound.

**ONLY VICTOR OFFERS SO MANY IMPORTANT FEATURES**

The above 10 points give a quick picture of the advanced features you should expect in a modern 16 mm sound projector. Only a Victor brings you *all* of them. And with every Victor you also get the "standard" features of all quality sound projectors, including 2 speeds for sound and silent film, still picture, and reverse projection.

Particularly important is Victor's new red, white and blue color-coded threading. Color lines on projector clearly show where to thread and the sequence of threading. Other time-proven features—exclusive with Victor—are safety film trips, top-mounted reels, and power rewinding with no change of belts or reels.

Victor was first to develop 16 mm projectors and through the years Victor has been first to perfect improvements that assure finest pictures—finest sound—easiest operation. Victor long has been the choice of A-V experts in 73 countries.

**Victor Assembly 10**—Lightweight projector for small audiences. Amplifier operates at 10 watts continuous output, 18 watts peak. Available with 9" speaker, top-mounted and fully baffled—or separately cased 12" speaker as shown.

## NEW VICTOR VIEWER

The first professional 16 mm viewer with "frame counter" priced under \$100. Large 3 1/4" x 4 1/4" screen is brilliantly lighted by 75-watt lamp. Equipped with f2.8 triplet lens. All optics coated.

# No matter which you use...

EVERY

PROJECTOR IS...

*Guaranteed  
for  
a Lifetime*

Many projectors LOOK somewhat alike, in appearance and price — but Viewlex has something extra! Rigidly controlled standards of QUALITY carried through every step of manufacturing assure projectors that are trouble free and a delight in operation. VIEWLEX QUALITY CONTROL is a precious property — it is the real reason why Viewlex guarantees every Viewlex projector for a lifetime!

## V-4S — V-44S

For single-frame filmstrip. The ideal budget-priced filmstrip projector. Clear, sharp projection; brilliant illumination; simple to operate. Cannot tear film. Model V-4S 150-watt convection cooled. Model V-44S 300-watt motor fan cooled. 2", 3", 5" and 7" focal-length lenses available.

## VIEWLEX VIEWTALK

Plays standard and long-playing records, up to 16" — two permanent needles on twist arm. 33 1/3, 45, or 78 r. p. m. Model WR — 4" x 6" detachable speaker for 150 or 300-watt Viewlex projectors. Model WHD — 6" x 9" detachable speaker for 500-watt projector.

## V-500

For 35mm filmstrip single and double frame, vertical and horizontal pictures. Takes 2"x2" and bantam slides in any type mount intermixed. New refrigerator cooling. 500 Watt fan cooled. 5 inch F/3.5 Professional lens. Automatic take up reel and optical magnifying pointer. 3, 5, 7, 9, 11 inch lenses available.

## HI FI VIEWTALK

A top quality sound-slide unit—3 speed record player for records up to 16". Brilliant, sharp projection provided by V-500 35MM combination slide-filmstrip projector. Projector or sound system may be used independently. Microphone jack provided.

## INSTRUCT-O-MATIC

Completely automatic projection of 2 x 2 and bantam slides. A touch of changer automatically brings new slide in position. Automatic timer—remote control—lets you sit with your audience. 500 watt fan cooled. Interchangeable lenses. Turns room light off when projector is turned on.

## V-2C - V-22C - V-25C

For 35mm filmstrip single and double frame, vertical and horizontal pictures, 2x2 and Bantam slides, any type mount. Change from filmstrip to slides in seconds. V2C—150-watt, V-22C —300-watt motor fan cooled. V-25C—500-watt motor fan cooled. 3-5-7-9-11 inch lenses.

# NEW CORONET FILMS FOR ALL GRADE LEVELS

## FOR THE INTERMEDIATE GRADES

**Boy of a Frontier Fort** (1 reel). Here is daily life in a frontier fort in the 1790's. We watch young Daniel doing his daily chores, frontiersmen using tools and firearms, and follow the dramatic preparations to ward off an expected Indian attack.

## FOR JUNIOR AND SENIOR HIGH SCHOOLS

**Launching the New Government (1789-1800)** (1½ reels). This film visualizes the problems confronting Washington, Adams, Jefferson, and Hamilton in our country's first years. Major events are shown — the creation of the U. S. Bank, the Whiskey Rebellion, the Judiciary Act, and the Tariff Act.

**Reproduction in Plants** (1¼ reels). The difference between the processes of sexual and asexual reproduction of plants is shown. Self-pollination, cross-pollination, selective breeding — each illustrates reproduction principles clearly and graphically.

**The Sea: Background for Literature** (1 reel). This fascinating film shows how, again and again, the sea has served as inspiration and background for some of the greatest literary works. Included are re-enacted excerpts from Captains Courageous, Two Years Before the Mast, Treasure Island, and Moby Dick.

**The War of 1812** (1¼ reels). In this film, the major causes, strategy, and results of the War of 1812 are presented. American reactions to the War and its effect on American-Canadian relations are illustrated and clarified.

*These films are available in full, natural color or in black-and-white.*

The films described below will bring new meaning to classroom instruction. Each will exert powerful impact on the minds of youngsters — eager to learn and only needing a vivid picture of life beyond the classroom to further stimulate their minds. Coronet is proud of these films, for they represent the essentials of what a teaching film should be — interesting, visually stimulating, integrated with textbooks, and on a wide variety of subjects for the whole curriculum.

## WRITE FOR PREVIEW . . .

*if you are interested in purchase, we shall be pleased to send you prints of the films described. Use the coupon. Rental information will also be supplied on request.*

**Have you received Coronet's new catalogue? . . . just off the press! If not, simply so indicate on the coupon and we shall send you a copy immediately. You are certain to be pleased with this colorful 96-page book which describes in detail more than 800 of the finest educational films, available in color or black-and-white.**

CLEAN YOUR FILMS  
**THE SAFE WAY**  
THIS SUMMER

in the death of technicians association this tragedy

**CARBON TET PROVES FATAL!**

Carbon tet poisoning has been listed as a contributory factor in the recent death of a film editor. Following this tragedy, the National Association of Broadcast Employees and Technicians has launched a determined drive to ban the use of carbon tet as a film cleaner. "Carbon tet can poison," the association warns. "If you're using it, better switch to another product!"

## On the SCREEN

### Cover: "Moby Dick"

The subject portrayed on this month's cover is a portrait of Captain Ahab, by Gilbert Wilson, from the Contemporary film "Herman Melville's Moby Dick" produced and directed by Jerry Winters. The film is narrated by Thomas Mitchell. It is in superlative color, and the creative editing and evocative music livens the heart of this immortal tale. Arthur Knight of The Saturday Review describes it as " . . . an incredible feat of distillation, revealing the philosophic concept and conflict that is the heart of Melville's great book . . . a new art form." — and Howard Thompson of the New York Times calls it "A tingling, dynamic version of Herman Melville's famous narrative."

### Belated Credit

In the February, 1958 issue of Educational Screen, we picked up and reprinted a three-page article titled "let's 'see' the school's program," by Dr. John Molstad, Assistant Professor of Education at Audio-Visual Center, Indiana University. We neglected to say, however, that this piece was originally published by the *Indiana Teacher*. We are extremely sorry for this oversight, and wish to give them full "credit" for first discovering its value.

### Does This Include You?

During the past several months, we have had quite a few complaints from subscribers concerning the condition of their magazines (Educational Screen) when they received them via the mails. In most cases, the covers were defaced or destroyed. If others have had this

same trouble, we would like to hear about it and perhaps we will eventually be able to pin-point the source of the trouble and eradicate it.

### Next Month's "Special" Issue

Our April issue, as for several years past, will be one of predominantly AUDIO emphasis. Articles such as "Listening!!!" (a doctoral, thesis study), "Can Tapes Teach?" (an NASSP research), and some latest language laboratory experience make this issue truly outstanding. There will be a new directory, too, of sources of instructional recordings, the concluding part of "Notes on DAVI's Ancestry," and all the usual departments. Watch for it!

### A-V in the South

In this month's editorial (see page 122) Paul Reed points South to the strides that are being made and in many cases the lead that has been taken by Southern educators in the use of Audio-Visual materials in education. He makes particular mention of places and events and even cites circumstances. Then — as though to deliberately support his contentions, an article appears that was written by Carlton Smith, titled "Physics Film Course Aids Science Education." (See page 126.) In reviewing this, we noted with extreme interest that the heaviest early interest in this film, featuring physicist Dr. Harvey White as teacher, was among educators in southern states; Georgia, Tennessee and the Carolinas. These are two enlightening and very worthwhile items to read in this issue. We recommend them to all. —GM

## Backs Up Issue

Editor: Congratulations for your pungent statement to the Misguided Scientists in the January issue of Ed. Screen.

I suspect we need more of this for a better sense of direction.

William Fulton

Assoc. Prof. of Education  
The University of Oklahoma  
Norman, Oklahoma

## In Hearty Agreement

Editor: I have just read your editorial in the January issue of EDUCATIONAL SCREEN. I heartily endorse

your views about the "misguided scientists." This confusion between materials produced for entertainment and those produced for education apparently is common in all of the mass media.

L. Keith Tyler, Director

Institute for Education by Radio-Television  
The Ohio State University

## Editorial Note

We were slightly misguided ourselves in writing the January editorial titled "Misguided Scientists." This editorial was based upon an authoritative news story date-lined Hollywood and pub-

lished in the November 17, New York Times. Since the publication of our editorial we have learned that the physics films are not to be produced by a Hollywood company. A contract has been signed for the production of these films by one of the oldest and largest educational film producers. Apparently this happened between the time of the New York Times story and the publication of our editorial. We are sorry for this confusion, but we sure are glad that these important films are to be produced by people who have proved they know how to make educational films.

Paul C. Reed

# COMPARISON PROVES...

# transpaque

## PUTS MORE LIGHT ON YOUR SCREEN!

Compare the Transpaque side by side with any other projector on the market. Project the same picture size with each . . . with the same materials, opaque or transparent. You'll find the new Transpaque puts up to *twice the light on the screen* with opaque materials . . . up to *three times* with transparencies.

This means you can use the Transpaque from the front or back of the room, *and even for rear projection*, without putting out lights or drawing shades. Selection of projection lenses from 4" to 40" focal length permits you to use *any* screen at *any* distance.

You can purchase the Transpaque complete for opaque, table, or overhead projection. Or, you can purchase this unit for one type of projection now and add equipment for other uses later. See it demonstrated in comparison with others and you'll be convinced that this is truly the aristocrat of visual communication projectors. Write us to arrange a demonstration for you.

TRANSPAQUE  
OPAQUE PROJECTOR

# PROJECTION OPTICS

PROJECTION OPTICS CO., INC. 330 Lyell Ave., Rochester 6, N. Y.

## Senator Likes Ed. Screen

Editor: I am always interested to read through issues of your fine publication. I noted with particular interest the helpful annual Blue Book of Audio-Visual Materials in the December, 1957 issue.

Alexander Wiley

Wisconsin Senator  
United States Senate  
Washington, D.C.

## Ad Interest Holdover

Editor: Will you please supply me with the address of the following firm if it is still in operation? *The American Classical League Service*. We wish to order materials advertised by you in 1952.

Teresa L. Oden, Coordinator

Audio-Visual Education  
Laurel City Schools  
Laurel, Miss.

## S.O.S.

Editor: May I add a plaintive footnote to Stan McIntosh's letter in the February, 1958 issue of Ed. Screen, page 60, in which he credits "Destiny, deKieffer, and an able Archives Committee" for finding his lost copy of Anna V. Dorris' Book?

Remember the original "reader's right" item (June, 1957, page 274) in which I mentioned my copy of Dorris as being one of my earliest contacts with the field and a constantly ready reference?

It was too ready . . . I lent it to someone . . . and now MY COPY IS MISSING! Can you put deKieffer and the Archives Committee on the trail? (I presume you have little influence with Destiny?)

Honest, the book IS lost . . . and I hope whoever has it will see this letter.

Henry C. Ruark, Jr.

Director of Information  
National Audio-Visual Association  
Fairfax, Virginia

# FREE! a double RCA Victor record bonus just for making teachers happy!

# Have you heard?

## Film Postal Rates Bill

Congress is being asked to approve a 25 per cent boost in the "Book Rate," which now also encompasses the postage rate on educational motion pictures. H.R. 5836 also proposes to remove territorial limits on "library book rate" film shipments, but at present provides that all non-profit organizations, except schools, establish their eligibility with their local postmasters before being eligible to mail at this rate. Comments on likely effects of such legislation, if enacted, would interest NAVA, Fairfax, Va.

## Excise Tax on Educational Audio?

The Excise Tax Technical Changes Act (H.R. 7125) proposes a 10 per cent excise tax on all tape-recorders and on educational-type record and transcription players. Efforts are being made to exempt "complete transcription-playing phonographs of the type primarily designed for reproduction of audio teaching materials in schools, churches and industry." The exemption of tape recorders is reportedly more difficult because those sold for educational use are generally not too different from the units going to home users. Devices used primarily for education have never before been subjected to excise taxes, in the theory that schooling should be aided, not taxed.

## Walter Bell, DAVI President-Elect

Charles F. Schuller, Director of the AV Center at Michigan State University, has been confirmed, without opposition, as president of DAVI. Walter S. Bell, veteran Director of A-V Education in the Atlanta public schools, was chosen president-elect in a close referendum vote over James D. Finn, Chairman of the AV Department of the University of Southern California School of Education, and Neville Pearson, of the University of Minnesota.

Vice-President-elect is Helen Ratchford, director, Division of AV Education, Los Angeles County Schools. Newly elected board members at large were Edgar F. Lane, Wanda Daniel and Harold Wigren.

## Cracker-Barrel Discussion

The Harwald Company, 1245 Chicago Ave., Evanston, Illinois, held a most successful three-day "A-V Cracker-Barrel" program, Feb. 13-15, that drew a representation of A-V leadership that would have done credit to any official national meet. On each of the three days the sessions ran from early morning until 9:30 and later at night. Among the participants were Dr. Walter Wittich, University of Wisconsin; Dr. Robert Snider, Univ. of Chicago; Dr. Francis Almstead, N. Y. State Board of Education; Dr. James P. Fitz-

water, Chicago Public Schools; Jack Ellis, Northwestern University; Carson Graves, Syracuse University; Wanda B. Mitchell, Evanston High School, and a large number of "V.I.P." representatives of industry and education. The Harwald soiree was reminiscent of the industry-sponsored type of educator conference initiated long, long ago by such firms as DeVry and Keystone View. The annual workshops of the Calvin Company are in the same tradition. The Harwald Company's principal lines include the Inspecto-Film, the Movie-Mite projector, and professional editing equipment from Great Britain.

## DAVI Meets in Minneapolis

All A-V roads lead to Minneapolis April 21-25 for the annual meeting of the National Education Association's Department of Audio Visual Instruction.

The DAVI Board of Directors meets Sunday, April 20. The 21st (Monday) is given over to meetings of 15 "National Project Committees." Tuesday and Wednesday mornings will be taken up by sessions of occupational groups, Tuesday afternoon will feature a conference-type session headed by Dr. James J. McPherson on the "A-V Credo." The afternoon sessions are left open for educational field trips and for the commercial exhibits. The annual business meeting will be held Friday morning, April 25. Three evening general sessions topics are on "Extending Educational Horizons," "Effective Communication" and a debate on "Educational Television."

Of special interest to the A-V Industry is the Monday morning meeting of the Committee on Archives and History, and an extensive historical exhibit of the contributions leaders of the industry have made to the development of the resources of A-V education. Dr. Abraham Krasker, Boston University, is chairman; Ellsworth C. Dent, vice-president of Coronet Films, co-chairman.

The exhibit is being arranged under the direction of M. I. Smith, veteran head of the Division of Audio-Visual Projected Aids at the Duluth public schools. The exhibit will include nearly a score of historic projectors — Edison 22mm, Pathoscope 28mm, Bell & Howell 17½mm, Victor's 35mm and 16mm and others of similar vintage. Acme, Bausch and Lomb, Spencer,

## The KEYSTONE Overhead Projector

is really a

## MULTI-PURPOSE Projector

usable for:

Standard (3¼" x 4") Lantern Slides.  
Tachistoslides (4" x 7"), 2" or 2¼" Slides.  
Strip-Film. Micro-Slides.

It's a Real Daylight Projector — the lens system concentrates the light over a relatively small area, so that clear, brilliant projection is attained.

It is small and light — weighs less than 20 pounds. Versatile and efficient.

Our Local Representative Will Demonstrate Upon Request.

# OVER THE YEARS

Flexalum Audio-Visual blinds will be your most economical, most practical classroom window covering!

FLEXALUM A-V BLINDS GIVE YOU EVERYTHING FROM FULL DAYLIGHT (WITHOUT GLARE) TO "PROJECTION" DARKNESS—yet they *cost less to install* than any combination of black-out and conventional window covering. What's more, they *cost less to maintain*, too. Flexalum's special spring-tempered aluminum, wipe clean plastic tape and nylon cord give years of trouble-free service. (That's certainly a comfort in these days of ever-increasing maintenance costs.) And, the greater number of slats per blind, special tape construction and light trap channels enable you to turn any classroom into a dark auditorium at the flick of a cord. Less light comes in... less money goes out—with Flexalum A-V blinds... sold with a written five year guarantee by Hunter Douglas Aluminum Division of Bridgeport Brass Co.

SVE and other early names will also be represented.

This historic note will also be carried out in some of the DAVI Trade Show exhibits. Mr. Dent is writing to former exhibitors suggesting emphasis in their displays on the many important developments they have pioneered in.

## School Facilities Council At AASA Regionals

"Planning School Buildings and Equipment to Achieve Maximum Efficiency in Instruction" is the theme of a series of discussion meetings arranged by the School Facilities Council for the American Association of School Ad-

ministrators Regional Conferences. Foy Cross, Zeph Marsh and Charles Stock will chair the panels at St. Louis, San Francisco and Cleveland.

The Council is also planning a TV film specifically designed to assist superintendents and boards of education throughout the country who are faced with bond issue votes for new school construction. The SFC address — 26 Washington Place, New York 2.

## Obituary

Yale University Press Film Service advises us of the death of veteran audio-visualist J. Irving Greene. For more than 30 years he had served as Director of Distribution for the Yale

CHRONICLES OF AMERICA PHOTOPLAYS, and, since 1956, also of the new PAGEANT OF AMERICA FILMSTRIPS. "We were all very fond of Mr. Greene," his colleagues write. "He was a thoroughbred and everyone who knew him thought very highly of him."

## NAVA Convention Plans

A committee of 15 met for two days at New Orleans to work out plans for the convention and trade show of the National Audio-Visual Association. Dates: July 26-29. Place: Hotel Morrison, Chicago. Theme: "Audio-Visual 1960." Format will follow that of last year, breakfast to noon Monday and Tuesday convention sessions; trade show every afternoon, starting Saturday to permit greater attendance by those attending contiguous conventions and meetings — educational film libraries, medical-science, industrial training, religious. Audio-visual worship service Sunday morning; workshop on the use of A-V in religious activities Sunday afternoon and evening. Sales meetings will be concluded prior to opening of convention sessions. Annual NAVA convention dance Saturday night.

## Illinois A-V Association

The spring meeting of the Illinois Audio-Visual Association will be held in Springfield, Illinois, on April 11th and 12th. For particulars consult Mrs. Beatrice Simmons, Office of the State Superintendent of Instruction, Springfield, Illinois.

## New NAVA Directory

All types of audio-visual presentations, projection services, rental or purchase of A-V equipment, tape recordings of meetings, rental of 16mm films, etc., throughout the United States and Canada can now be obtained through the use of the new directory published by the National Audio-Visual Association, Fairfax, Virginia.

The NAVA Membership List and Trade Directory contains information on the specific services offered by some 400 A-V dealers.

The Directory lists NAVA dealers by geographical location so audio-visual users can locate and use the services of any dealer, near or distant, for conferences, sales meetings, exhibitions, religious meetings, or any other situation involving the use of audio-visual materials.

Single copies of the Membership List and Trade Directory are available free to audio-visual users from the National Audio-Visual Association, Box 337, Fairfax, Va.

The TSI Duolite, provides large screen projection and also TV-type pictures on built-in, folding screen. Holds up to 2000 ft. of film.

# THE TOTAL IMPACT

OF MOTION, SIGHT AND SOUND

NOW IN  
UNDARKENED  
ROOMS

*too*

The power of motion pictures is now yours to employ virtually anywhere. There's a TSI projector for every use—desk top, office, shop, or auditorium with standard projection, repetitive projection, and built-in TV-type screen. All are light weight, and of unique design for economical upkeep. TSI users comprise a blue ribbon list of businesses and educational institutions in the Americas and overseas. Let us arrange a demonstration through our dealer. No obligation to you. Write or call direct to:

Wally Moen  
**TECHNICAL SERVICE, INC.**

30865 Five Mile Road • Livonia, Michigan

NEW YORK OFFICE  
141 E. 44th St., New York 17

WEST COAST OFFICE  
4357 Melrose Ave., Hollywood 29, California

The TSI Model D, for both large screen projection and TV-type picture on built-in screen. Includes magazine for repetitive projection without rewinding.

The TSI DeVrylite, small and light weight, provides unsurpassed picture and sound for auditoriums and classrooms. Accommodates up to 2000 feet of film.

The TSI Moviematic, with built-in, folding screen, weighs less than 25 lbs. Use in lighted and darkened rooms. Repeats film without rewinding.

## USAF Thunderbirds

A film entitled THUNDERBIRDS produced by the United States Air Force, did very well in the recently held foreign film festivals. THUNDERBIRDS was accepted for participation in the following events: Edinburgh International Film Festival; VII International Film Festival, Berlin; and the VIII International Exhibition of the Documentary and Short Film, Venice.

In addition to qualifying for letters of participation at these festivals, the film received a special mention of photographic excellence from the Venice Festival. THUNDERBIRDS was photographed in color and is 13½ minutes in length. It was produced completely in the Service. The contents depict the demonstration of the famed United States Air Force aerobatic team and some very unusual photographic techniques are employed. The film is available for loan for public nonprofit showings and nonsponsored television release through the closest United States Air Force film exchange. It is also available for purchase through United World Films, Inc., 1445 Park Avenue, New York, N. Y.

### F. F. Award

Coronet Instructional Films, Inc. has added another George Washington Medal to its growing collection of Freedoms Foundation awards. This year's prize is for "The Boyhood of George Washington" and is the only one among ten awards for 16mm films that carries the "Distinguished Service Award" asterisk. A gold medal also goes to the National Council of Churches of Christ in the U.S.A. for its film "Broken Mask." This is the film that was featured in the Sunday worship service at the NAVA convention last year.

### NU Summer Session

The 1958 summer session of the course 225-CO7, "Audio-Visual Teaching Materials in the Classroom," will be held at Northwestern University, Evanston, Ill. Charles R. Crakes will conduct the course as he has done for the past fifteen years. The class will meet five times per week, for a period of six weeks and will carry credits of three hours.

### Second Medical Workshop

The Second Medical Motion Picture Workshop will meet on the sound stages of The Calvin Company, Kansas City, Mo., April 15, 16 and 17, 1958. Tuition will be \$60 including all working sessions, three luncheons and the Workshop banquet. Advance registrations are required. Attendance will be limited to 150.

... in brilliant detail  
with the AO SPENCER OPAQUE PROJECTOR

### SO EASY

Teaching and learning are much easier with this unique projector.

You just flip a switch to project a big, bright picture of your teaching materials exactly the way you want to show them.

### SHARPEST IMAGE

Coated objective optics cut internal glare and reflection. With the exclusive all-glass reflecting system, this guarantees a sharp, crisp image on the entire screen...edge to edge...corner to corner.

### 1,000 WATT INTENSITY

High-powered illumination shows a clear, detailed picture in a semi-darkened room, or even a normally lighted room with shades up.

### STURDY, PORTABLE

The projector is built of rugged, lightweight, lifetime aluminum. Carry it anywhere.

The Workshop is being planned by Neal Keehn, Vice President of The Calvin Company, in cooperation with Dr. David Rule, Director, the Department of Audio-Visual Education of the University of Kansas Medical Center, and Mr. C. Graham Eddy and Mr. L. Paul Flory, Chief and Assistant Chief of the Medical Illustration Division, Education Service of the Veterans Administration, Washington, D. C.

Full information is available from the Director of the Second Medical Workshop, The Calvin Company, 1105 Truman Road, Kansas City 6, Missouri.

### Can't Ignore TV

"Educators can't ignore TV as they plan for the future" said President H. K. Newburn of the Educational Television and Radio Center, in an address delivered recently before the 11th annual Teachers Education Conference at the University of Georgia in Athens.

He said there is evidence that the average child of school age spends more time viewing television than he spends at school . . . that any activity which involves such a percentage of the child's time is worthy of considerable attention on the part of school people.

Discussing the actual use of TV for teaching, Newburn says that the uninitiated assume that education by television simply means bringing a camera or cameras into the classroom where the teacher does what comes naturally. But the teacher on TV faces a situation which calls for preparation and dynamic techniques. She must be prepared to call on specialists in electronics and communications as well as the usual library specialists, content

authorities and curriculum experts.

Since lack of two-way communication is a major problem with televised education, the TV teacher must make up for this shortcoming by providing other means of participation. Key questions might be suggested for discussion, reports of a written nature could well be assigned, readings supplementing and reinforcing the television presentation should be outlined and required.

Newburn notes that television can be an important means of supporting the classroom teacher, since through this medium the specialist in a given field can provide the lecture part of a course to a large number of students in various classes while the classroom teacher can handle the discussion, tests, evaluations and conferences so important to the total teaching situation.

### People in the News

**Ann Arbor, Mich.:** Lloyd S. Michael, superintendent of Evanston, Illinois, Township High School, has joined the Board of Directors of the Educational Television and Radio Center. In this capacity he will help to decide policy of the national organization. The ETRC serves as network headquarters for the country's noncommercial ETV stations. The Evanston High School is experimenting with television in instruction.

**Warsaw, Indiana:** Norlet, "Pete" Hamzy has been appointed District Manager for the Da-Lite Screen Company, Inc., Warsaw, Indiana. He will cover the Southwest states with headquarters at 7469 Mohawk Avenue, Fort Worth 16, Texas.

Pete is well known in the photographic circles of the South. His work

and acquaintances in the Audio-Visual Field will be of tremendous assistance in rendering service to Da-Lite Dealer and other potential users of Da-Lite products in the Southwest territory.

**Johnson City, New York:** A. A. Davis has been appointed Regional Director, Visual Aids, Ozalid Division, General Aniline and Film Corporation, according to announcement by James A. Travis, Ozalid General Sales Manager. Davis was formerly regional manager RCA Visual Products. He was also instructor at the NAVA institute, Indiana University.

**Wilmette, Illinois:** Robert P. Brown, presently Manager of Encyclopaedia Britannica Films' Midwest Regional Office and an eleven-year veteran with the company, has been appointed Manager of the Encyclopaedia Britannica Films, Inc. Development Department.

Mr. Brown will head the group of EBFilms people who will carry the story of educational film utilization to school personnel throughout the country.

Succeeding Mr. Brown as Regional Manager will be Ralph Wagner, previously District Manager for Missouri and East Kansas.

# PHOTOPLAY FILMSTRIPS

Prepared by William Lewin, Ph.D.

**Knights of the Round Table** — A set of two filmstrips. Part One, 25 frames, explains the background of the story, its theme, its significance as an early attempt to organize a league of nations and how the United Nations Security Council is the Round Table of today. Part Two, 28 frames, tells the colorful story of the great legend, based on the M-G-M photoplay. **\$7.50.**

**A Lesson in Mythology** — Explains Andromeda, the Minotaur, Iphigenia, etc., based on M-G-M's *The Living Idol*. 25 frames, color. **\$7.50.**

**The Glass Slipper** — The charming fairy tale of Cinderella, told in a new way, based on the M-G-M photoplay. 36 frames in full color. **\$7.50**

**Alexander the Great** — Biography of the first man to conquer the civilized world, based on the photoplay. Shows Alexander's effort to unite Europe and Asia, a task with which the U.N. is still faced. 55 frames. **\$7.50.**

**Adventures of Robinson Crusoe** — In full color, 50 frames, a clear pictorial guide to the Defoe classic, based on the United Artists screen version. **\$7.50**

**Richard III** — Based on Laurence Olivier's colorful screen version of Shakespeare's famous play. 48 frames. **\$7.50**

**Romeo and Juliet** — Shakespeare's great love story illustrated in color from the J. Arthur Rank production filmed on location in Verona and other Italian cities. 44 frames. **\$7.50**

**Columbus** — Black-and-white, based on the J. Arthur Rank production starring Fredric March. 55 Frames. **\$3.50.**

**The Vikings** — In full color, 47 frames, based on the Kirk Douglas production. **\$7.50.**

**Hansel and Gretel** — In full color, 42 frames, the highlights of the beloved fairy tale as performed by the charming Kinemins of Michael Myerberg's screen version, released by RKO Radio Pictures. **\$7.50.**

**Greatest Show on Earth** — In full color, a lively pictorial guide to the circus, based on Cecil B. DeMille's Technicolor photoplay, which won the Academy Award in 1953 as the best picture of the year. 40 frames. **\$7.50**

**Ulysses** — In full color, 64 frames, a pictorial guide to the new Paramount screen version of Homer's *Odyssey*, produced in Italy. An invaluable aid to the study of the classic. **\$7.50.**

# KODAK MAKES AUDIO-VISUAL NEWS

## ANNOUNCING A NEW KODAK PAGEANT SOUND PROJECTOR AT A NEW LOW PRICE

The new Kodak Pageant Sound Projector, Model AV-085, rolls prices back to 1955-56 levels. It lists for just \$439!\* At the same time, it has all the essentials for good 16mm sound projection. The AV-085 is a true Pageant.

As with all Pageant Projectors, you *never* oil the AV-085: it's permanently lubricated for you at the factory. As with all Pageants, it is easy to operate, sets up in a jiffy with folding reel arms, attached belts, and simplified film path. And it has Kodak's exclusive Super-40 Shutter for added screen brilliance.

*New features, too*—There's a powerful, sensitive new amplifier, designed around *printed circuits*, to make it more compact, rugged, easy to service. It delivers its full rated 8 watts. For better listening, the speaker

is housed in a *baffled* enclosure which assures good response over its entire frequency range. The speaker itself is an 11-inch oval—shaped that way to make it compact—and designed to give you the same effective cone area as a conventional 8-inch round type.

The Model AV-085 has a new type of pull-down claw that's virtually wearproof, made of hard tungsten carbide. You'll have no problems with municipal electrical codes either—a new 3-wire cord provides for grounding, adapts to ungrounded outlets, too.

Ask your Kodak Audio-Visual dealer to demonstrate the new AV-085 Pageant. Or write for Bulletin V3-22 for full details. No obligation, of course.

\*List price, subject to change without notice.

EASTMAN KODAK COMPANY, Dept. 8-V, Rochester 4, N. Y.

New low-cost Pageant Model AV-085 comes with economical 750-watt lamp, exclusive Kodak Super-40 Shutter for brilliant pictures on the screen.

Resonant, natural sound comes from new 11-inch oval speaker in baffled enclosure. Oval shape lends rigidity, makes case more compact.

# POINTING SOUTH

We know it isn't polite to point, but maybe The South and especially the educational leaders of The South will forgive us if we point toward them this month. The point we want to make is that the whole country should sit up and take notice of some of the ways The South is leading in audiovisual matters. Let's look at some "for instances."

Take the matter of constructing and operating non-commercial educational television stations. Not only was the first one in Houston, Texas, but of the twenty-eight stations now on the air, *ten* of them are in The South. That's thirty-six per cent! And the only state in the nation that can boast of a chain of educational television stations capable of reaching every classroom and person in the state is Alabama! Compare this with the situation in the populous and prosperous Middle Atlantic and New England region, including the great Empire State of New York. In this whole area there are but three stations, and none of these is in the state that first proposed the idea of state networks, New York.

Now consider this. One of the most significant recent developments in audiovisual affairs was the announcement last year that a whole year's high school science course was to be made available on film. Subsequently one hundred sixty-two lecture and laboratory sessions with one of the nation's finest physics teachers were put on film. Here was imaginative enterprise! Here was a challenging opportunity to use motion pictures in a way they had never before been used. Here was potentiality for attacking a critical educational problem, the improved teaching of science. The South responded first with the most. Early reports indicated that two-thirds of all these physics films in use were being used in the classrooms of The South.

Here is another example. A brochure, "Teaching Materials in the Modern School," was developed nearly a decade ago by the Southern States Work-Conference on Educational Problems. This was one of the earliest statements of an "instructional materials" concept giving consideration to audiovisual materials in relation to all other instructional materials. It summarized the experience and thinking of forward looking Southern educators and pointed the way for others. There are many who now believe that the normal evolution in the administration and use of audiovisual materials is toward their inclusion in a total instructional materials context. Pronouncement and practice in The South were in the lead.

Finally, here is an instance of creative leadership that is brilliantly daring. Southern educators are proposing to interrelate with picture and sound more than one hundred thirty institutions of higher education. Through closed circuit television a teacher in any one institution would be immediately available on the campus of any and all other colleges and universities of the South. This is not just "dream talk" either. This project that would cost more than a hundred million dollars is being considered as a practical and economical adaptation of new communications tools to the tasks of higher education. This is leadership thinking of the highest order.

From our smug Northern orientation, these things they're doing in The South seem all the more remarkable. In matters that are extremely important for audiovisual education, and for all education, The South is pointing the way for the rest of the country to follow. So, even in mid-winter, while it's still cold up here, our editorial hat is off in salute, and is pointing appreciatively to The South.

*Paul C. Reed*

Costumes, when worn either by the natives or members of the tour, add color and interest to a picture. They also aid in visually identifying locale.

by Alvin B. Roberts

Audio-Visual Director  
Western Illinois University  
Macomb, Illinois

# COURSE IN FIELD PHOTOGRAPHY

## tour members share interests and benefits

FOR more than thirty years the author has conducted field tours for high school students or teacher groups. Throughout that period of time he has had an opportunity to observe hundreds of people attempting to make picture records of their trips. With the introduction of the 2 x 2 slide camera and Kodachrome Film, interest in picture taking increased tremendously. This work with many different teacher groups showed that help was needed in learning to operate the camera, reading a light meter, selecting appropriate subjects, and in composing, and in organizing a narration. Five years ago for the first time, Western Illinois University offered a course in Field Photography in an effort to assist tour members in getting a better set of pictures, either for use with groups in their

own communities, or with the students in their classrooms.

It is surprising to note the number of people who start on a rather extensive tour with a camera about which they know practically nothing. One person may report, "I have never taken pictures, but my son wanted me to take his camera." Or another may appear with a brand new camera that some club or other civic organization has presented as a gift; and yet not have the slightest idea as to how to operate it. Consequently, the first part of the course in Field Photography centers on the operation of the camera. Usually a couple of hours at the first orientation meeting is given to those who are going to take pictures. During this time each individual is given whatever help is required in learning to load and un-

load the camera, also pointers on how to hold the camera, how to release the shutter, how to use the range-finder, how to set the stop, and shutter speed. Practice is also given in the use of the light meter and in transferring the readings to the camera. For those who do not have light meters instruction is given in the use of light charts. If it seems advisable the group is divided so that three or four people working together will have access to a light meter. The hours so spent saves valuable time when en route.

Considerable help is needed in the composing of the picture. It is common to assume that all that is necessary to get a picture is to point the camera and release the shutter. The author, on the first two or three days of the tour, uses a camera with

## Students are instructed in photo-equipment, and picture-taking techniques

ground-glass viewfinder. In this way good and bad composition of the same subject can be shown, and within a relatively short period of time most of the tour members are able to follow suggestions in the selection of a subject and in determining the angle that will give best results. With twenty or thirty people, considerable time is required for the first two or three days; but once they become proficient in the operation of their cameras and are familiar with the basic principles of composition, real headway can then be made in the selection of subjects.

Many feel that all one needs to do in making a picture record of a tour is just shoot whatever is handy and then organize the pictures taken into a Travelogue or teaching unit. When a person working on such a basis returns home he will find that he may have hundreds of scenic shots but not very many, if any, of the people, their homes, the industries, agriculture, products, methods of transportation, monuments, public buildings, and other subjects that may be needed to give a well-rounded and balanced view of the region covered. Much time is given in helping the tour member plan a picture record. Most of this work will need to be done individually, as each person on the tour may have an altogether different use for the pictures he is taking. Most travelers are interested mainly in a series of pictures that can be used as a travelogue which they may share with their own students, or people in their community. In addition, some may want to produce teaching units. In this latter area again individual work is required because of the various subject areas in which the members of the tour group are interested. At first, it seems or appears quite difficult for a person to think of specific pictures to take in an area that is entirely new to him; however, the author has found that by the use of travel folders, booklets, postcards, and pictures selected from magazines in advance—the prospective photographer may get a general idea of the type of subjects that will be found in the countries visited.

Basic categories in which pictures are to be taken are then listed. These will include characteristic scenes such as topography, people, points of historical interest, cities, industries, arts

and crafts, recreation, plant and animal life, agricultural products, and places of scenic beauty.

The author has found a Distribu-

tion Chart most helpful. This chart is not to be carried by the photographer and filled in when each picture is taken; instead it is used at the end

**Framing a distant scene with foreground subjects is a very important part of picture taking as it gives the study depth and dimension.**

**Subjects that are always of interest to the photographer in another country, are the people in their native costumes, and their homes.**

# Physics Film Course

## Aids Science Education

A Report

by CARLTON SMITH

SCIENCE education has been a topic of heated discussion, not to say recrimination, since the first Soviet sputnik was lobbed into space last year and settled down to its smug circumnavigation of our home planet.

That our science education wants improving is agreed by nearly all (though what is meant by "improving" is something else again), and we are about to devote considerable quantities of money to that end.

In this atmosphere, it is interesting to see what has happened to this country's most ambitious project to date in the development of audio-visual instructional materials in science—something on which the Russians have placed heavy emphasis for some ten years, reportedly with excellent results.

At the beginning of the school term last fall, about 350 high schools and

colleges began pioneering use of the first complete academic course ever available in its entirety on film: 162 half-hour lecture-demonstrations and lab sessions featuring physicist Harvey White as teacher, produced by Encyclopaedia Britannica Films—a project that had the guidance of the National Academy of Sciences, and financial backing from the Fund for the Advancement of Education.

Some of the heaviest early interest came from the southeastern states. Several of the 40 courses on film that were snapped up between the end of shooting in June, 1957, and school's opening in September went to Georgia, Tennessee, and the Carolinas.

In Macon, Ga., in the classroom in Ballard-Hudson High where B. D. Oliver teaches physics, you can still detect the odor of mortar and fresh

lumber—not uncommon in this state that is in process of giving itself a mighty lift by its educational bootstraps. The school, with Oliver's class of 18 students, is one of six among which one set of the physics films is circuited.

"There's no other way we could teach these boys this much physics," says Oliver. "Where would we get the equipment to make all those demonstrations?" They work on 55-minute periods, and see a 30-minute film every day of the school week, briefly introduced by Oliver. When he feels one of the films doesn't call for note-taking, it is run uninterruptedly during recess and over into the class period, to give them almost a full period for discussion.

How do the boys feel about missing recess? "They don't seem to mind."

Studio set in laboratory lesson "Reflection from Plane Surfaces."

Atomic model used to demonstrate cubic crystal structure of certain solids. (From "Photon Collisions and Atomic Waves" unit.)

Dr. White testing Coulomb's Law with special magnets and Hibbert balance. (From "Electricity and Magnetism" unit.)

Metal electrodes of a voltaic cell in laboratory lesson. (From "Electromotive Force of a Battery Cell.")

Oliver smiles. "They're pretty keen on this course."

This is the general pattern throughout the country, where the films are circuited to schools for classroom projection. Conscientious teachers, shaping their teaching around the 30-minute films, frequently report using recess, Science Club meetings, and extra-curricular hours to make additional time for discussion and project work.

Adolescents are eager science students when instruction is made both interesting and challenging. In Dublin, Ga., principal D. R. Davis illustrates the attitude of the class taking the film course by telling of his encounter in a locker room with a boy, whom he recognized as a physics student, idly plucking a taut string. Davis jokingly challenged him to tell him its rate of vibration. "I got such a lecture on wave motion, nodes, antinodes, and harmonics that I was sorry I'd asked. These kids are really wound up on physics." In Glenn County, Calif., a school board member heard so much about physics on film from his own son that the entire board attended a class session, and came away enthusiastic.

The imagination with which the teachers of science are putting this new instructional material to use is most interesting.

In Spartanburg, S. C., a junior high science teacher who operates a program of accelerated courses for gifted students borrows key films, as the high school physics teacher receives them, and gives his 7th and 8th graders an occasional shot of 12th grade physics. "Just imagine what a boost it gives their egos, to be able to say they're using the same material that high school seniors use. And, not incidentally,

they learn a lot of physics from them."

In Forsyth County High School, at Cumming, Ga., 8th grader Arthur Wright was experimentally enrolled as a regular member of the senior-year high school physics class. "It was a little rough at first," says his teacher, T. V. Roane. "He was a little bothered and upset, trying to adjust to the different class environment and the higher level of work. But his test grades have climbed up steadily, until now he's one of the better students in the class. I see no reason why physics, organized and presented as it is on these films, can't be taught in an earlier grade."

In Orland, Calif., physics teacher Walter Maas, who is "extremely pleased" with the way his regular physics class is taking to the course on film, was handed a problem group at the beginning of the year. "As a group, their reading comprehension was pretty well below normal. The administration wanted them to have a science course of some kind. We didn't want to call it 'General Science'—they'd think it was 7th or 8th grade stuff. And we were afraid that calling it 'Survey of the Sciences,' or 'Physical Science,' would sound too tough and put them off. Finally, we thought of offering a course called 'Electricity.' Every boy wants to learn about electricity. And you can tuck a lot of elementary physics and chemistry into an electricity package." The apt nomenclature attracted two classes, totaling 70.

"I decided to try some of the key films from the physics course with the class," Maas said, "and the result has been a very agreeable surprise to every-

one. The attention span of these students is short, so our method of using the films had to be quite different. We 'serialize' a 30-minute film over two, three, or four days, and tell them just to forget about the math. They like the idea of the films, and we have succeeded in teaching a good deal of science to this problem group. Where reading comprehension doesn't enable a student to absorb fairly complex ideas from the textbook, he can often grasp the same idea quite readily by listening and watching. Of course, the lucidity of Dr. White's explanations, and his wonderful demonstration techniques, are important factors here."

In California's Solano County, Dr. J. Carl Conner, county AV Director, reported a run on the three math films from the course (covering algebra, trigonometry, and use of the slide rule), in one after another of the county's schools. Inquiry showed that the requests for repeat showings had been initiated by groups of students. "An illustration," says Dr. Conner, "of the way that some of the physics films are being used in other subject areas."

At college level, the film course is being used at Pennsylvania State University as a prerequisite to college physics, for entering students who have not had physics in high school. Colleges frequently complain that they are being forced to teach high school physics, and one hope expressed for the course on film is that it will help to "move high school physics back into the high schools."

In Oklahoma City, St. Louis, at the University of Nebraska, and in Chicago, the films are being made available to a wide audience over educational TV stations. From the Chicago Public Schools, which got a head start

**Demonstration and determination of density by weighing an object in air and object in water.**

on the rest of the country by starting telecasts of the first-semester films early last year, even before production of the course had been completed, there came recently the first published data of an evaluation study.

Special tests, prepared in the Division of Student Examinations, were given 692 students who took Physics I via television, and 906 who received conventional classroom instruction. As the report points out, the television group had home handicaps; they were younger than regular physics students, they had completed less math than regular students, they carried a load of five major courses, and telecasts were scheduled late in the day when they conflicted with extracurricular activities.

Results of the testing showed, however, an average score of 72.0 for the film/TV group, and 66.7 for the regular students. When scores were compared for groups matched in distribution of Otis IQ's, the average score was 71.4 for the film/TV group and 71.5 for the regular students.

When Physics 2 was offered via television during the summer session, 117 students who had taken Physics 1 by television were among the enrollees. This group, given the Dunning Physics Test toward the end of the second semester, had an average scale score of 124, for what the Chicago report terms "the very gratifying achievement" of a national percentile rank of 78.

One of the most elaborate evaluation studies ever undertaken is now in progress at the University of Wisconsin, where Dr. W. A. Wittich heads a project in which 88 high schools are involved. Evaluations will also be made of use of the films for extension, or correspondence, study, and for self-instruction without a teacher in supervised study groups.

Whatever the Wisconsin study may show about the feasibility of teaching physics via film without a teacher, most of the experience to date indicates that educators regard it as a new type of instructional material to be used by the teacher, to broaden and strengthen his teaching capacities and abilities. And one of the important values of the films to the teacher, many of them are quick to say, is the opportunity it affords him to learn instructional techniques from a man who is highly talented teacher, as well as a physicist of stature.

Maas, a qualified teacher of several years' experience, says: "Anyone who doesn't admit that this is a wonderful course in methods just isn't being honest. I sometimes get so absorbed in watching White, wondering how he's going to develop this or that idea, that I forget I'm teaching a class."

In the Macon, Ga., school referred to earlier, Oliver previews each film on the preceding evening, when he is joined by the school's chemistry teacher, the biology teacher, and the head

of the science department. It constitutes a private seminar in methods for all of them; Oliver, whose preparation in physics consists of one engineering course, learns content too. "I look forward to it every night," he says. "I'd hate to miss one."

In Pittsburgh's Sacred Heart High, where an exceptionally strong science department walked off with top honors at the city's Science Fair last year, the physics teacher offered an explanation.

"A teacher can't really learn very much, from other teachers, by visiting their classrooms," observed Sister Mary Eudes. "I have tried. But all of us—including myself—are just a little reluctant to 'perform' when another teacher is watching. And besides, how much time can you spend in other teachers' classrooms? Dr. White is both an exceptional teacher, and a 'star' in front of the camera. This is really the way to effect the interchange of ideas within the profession that all teachers need, and want."

Sister Mary is an unusually well qualified teacher, with most of the work on a doctorate behind her, and a wealth of experience in teaching at both secondary and college levels. What about the films as instructional material? she was asked.

"I wouldn't be without them. Of course, I could teach physics without the films. But *with* the films, a very satisfactory division of labor becomes possible. Dr. White teaches physics—and I teach the children."

---

Note: The editors of Educational Screen & Audio-Visual Guide, recognizing the unique character of Dr. Harvey White's physics course film (162 lecture and laboratory sessions), asked Mr. Smith of EBF to prepare this exclusive report for our readers to give them some idea of the reactions of teachers who are using these films.

# Movable, Self-Contained Rear Projection

**Craig Fullerton**

Ass't Superintendent in Charge of  
Instruction  
Omaha, Nebraska Public Schools

and

**John Roberts**

Director of Property Services  
Greeley, Colorado Public Schools

A rear projection device built on a four-wheeled projection table which can be easily rolled from one classroom to another offers another means of screening filmstrips and motion picture films in classrooms.

Increasing numbers of one story school buildings are appearing in which deliberate attempts have been made to introduce natural light through clerestory construction, glass block, plastic bubbles and extensive fenestration. Darkening of classrooms in such buildings is needed to permit the use of all types of projected materials. Incorporating means for darkening classrooms in original building designs is desirable. If not so provided, a systematic program over a period of years of installing drapes or blinds has been adopted in many school systems.

Many school systems have not found it possible to include provisions for darkening in original building plans or to launch programs of subsequent installation. If classrooms cannot be darkened, it is common for teachers to move their classes to rooms where darkening is possible. It is possible but not always likely that effective use of instructional films will be made when this is done. When students are thus moved from their regular environments for learning, the instructional film may easily be regarded as "a movie" rather than a closely related, contributing experience to a total learning situation. Introduction of the film and establishment of good mental set for profiting from the film are not as readily achieved when the class is moved. From the disadvantages which seem to accompany the moving of students when films are to be used, the writers determined to design a rear projection device which would be simple and as foolproof as

possible for teachers to use in classrooms with no provisions for darkening and no student projection club assistance.

Projection tables mounted on wheels have been in widespread use for years. A marked area for setting a motion picture or filmstrip projector, a mounted plane mirror, a hinged screen and an enclosure to prevent undue dispersal of light were built onto such a table. Fastened to the lower shell of the table were guides to engage and securely hold a projector loudspeaker case.

A translucent material was needed for the screen. The images obtained using sand-blasted glass and frosted acetate possessed good contrast, but wide angle viewing was not possible. Tracing paper proved most satisfactory of the materials tried. A sheet of clear lucite was mounted behind the tracing paper for protection. While a front surface mirror would

probably be more efficient and prevent the formation of ghost images, sufficiently satisfactory results appear to have been obtained with a less expensive ordinary plane mirror.

Best results seem to be obtained when the screen is orientated in the classroom so that a shadow falls across it. A larger image may be obtained and the table may be shortened if a 1½ inch rather than a 2 inch lens is used.

Fifty per cent of the teachers in a one story elementary school housing some 600 students indicated after trial use that they would use instructional films in their own classrooms exclusively, using the rear projection device, if it were placed in the building permanently. Initial trial was undertaken in this building as less darkening was possible and more light was admitted to classrooms than in any other building in the school system.

Portable table mounted on wheels, has area on top for holding a motion picture or filmstrip projector, a mounted plane mirror, a hinged screen and an enclosure to prevent undue spread of light. Shelf below, has cleats attached to hold projector loudspeaker case.

# EFFECTIVE Flannel Boards

Flannel boards are in all instances a piece of ordinary outing flannel (about 50c/yd.) stretched over a piece of stiff material, e.g., heavy cardboard, plywood, or hardboard and fastened with glue, tacks, or tape. There are many "framework" possibilities, e.g., the cardboard triangular ones in the construction process above.

**T**HE flannel board, an effective teaching tool, has been used for years.

Parents have used them as educational toys with pre-school children. Teachers, particularly in elementary schools, have found many uses for this simple visual aid. This includes both church-related and public school work.

More recently, high school instructors and college professors have found this inexpensive and easy-to-make "hand tool" excellent in their classes, too. Today, farsighted business and industrial men are beginning to zip up their meetings and training programs with flannel board displays. The newest use is on television.

Why are flannel boards becoming more popular each day? Let's look at a few examples. These examples are from a new 14-minute color motion picture *Flannel Boards and How To Use Them*. E. Milton Grassell (School Specialist with the Department of Visual Instruction, Oregon State Sys-

tem of Higher Education) wrote the script and supervised the filming of the demonstrations.

Here are some reasons for the present-day flannel board popularity.

Flexibility is the first and most important reason. In fact, the flannel board is almost unrivaled with this unique advantage. This makes it easy to introduce items in a systematic order, rearrange them, and add to or subtract from the arrangement.

Rearrangement in itself suggests manipulation — another reason for using flannel boards. Take, for instance, telling time. The hands of the clock may be moved.

Flannel boards are also good for developing safety attitudes. A red, green and yellow disk can be manipulated on a cut-out traffic light silhouette.

Fractions may be manipulated to show that they are parts of a whole regardless of their size and shape. This is a good way to introduce these concepts; this is also a good technique for review and meaningful drill.

Instead of tacking this poster to the bulletin board, Milt Grassell has cut it into its logical sections and backed it with flannel (sandpaper, felt or commercial "adhesive" work just as well). Now, each section can be placed on the flannel board as it is introduced.

Students may give typical milk bottle silhouettes a third dimension by scraping the wax off one side of an ordinary milk carton so that the flannel, felt, or sandpaper may be glued on to make the 3-D visuals "stick" to the flannel board, for more realistic effect.

Animation is easy to do. That's another reason for using flannel boards. Animation can show plant growth by using cutouts to show the development of a plant from seed to full bloom.

The permanent outlines on the pieces of flannel were made with felt-nib pens. Speedball pen points and various colored India inks, grease pencils and crayons.

These few pages, of course, cover only a few reasons for using flannel boards. The film shows many more uses on the elementary, high school, college and adult levels.

Film, *Flannel Boards and How To Use Them*, was produced by Albert Bailey Films, Inc., 6509 De Longpre Ave., Hollywood 28, California.

▲ This picture illustrates an assortment of the materials that readily stick to flannel boards e.g. (the left flannel board shows) an arrow and square cut from masonite, balsa wood, sponge and pictures backed with flannel, felt, sandpaper, etc.; (right flannel board) Grossell's finger is pointing to cotton; other "adhesive" materials include felt and flannel.

◀ Flannel diagrams, similar to this basketball court, may be carried in one's pocket and fastened to the wall of the host school with masking tape.

The imaginative teacher may illustrate what happens from the time a flower seed is planted until it reaches full bloom. This type of demonstration may also be applied to vegetable plants whose tubers develop beneath the soil.

Barbara Grossell illustrates the root (appoint) prefix (dis) and suffix (ment) in the above manipulative device. The chalkboard-printed strips of cardboard may be erased and used over. Felt is glued to the rear of the strips so they will "adhere" to the flannel outline.

# The Terrestrial Globe For Education

**A**LTHOUGH the terrestrial globe is one of the oldest and most useful educational tools devised by man in his efforts to gain understanding and mastery of the earth on which he lives, few teachers in either science or geography seem to know how to use it as a scientific working model of the earth in space. It is the purpose of this brief article to point out how some of the forgotten lessons in the uses of globes from earlier times can now be adapted and applied to the problems of the age of space.

The existence of earth satellites in orbit around the earth has probably created more popular awareness of the earth as a sphere than any other historical event since the discovery of America and the first circumnavigation of the world. And today, as in the age of Columbus and Magellan, the globe is the indispensable visual tool which enables one to look at the world as a whole in relation to his place upon it and consider his relations to its shape, size, movements, and associations in space with other heavenly bodies.

Although, as we have indicated, the terrestrial globe is one of the oldest educational tools in existence, its functional use in the classroom and laboratory has fluctuated from age to age according to the nature of the scientific and geographical problems of the times. To the philosophers and astronomers of ancient Greece, the globe was essentially a mathematical symbol and model which enabled them to theorize about the size and shape of the earth and its mathematical relations to the movements of the

sun and stars. By the time of Claudius Ptolemy, about 150 A.D., the approximate size of the earth had been scientifically determined, a mathematical framework of latitude and longitude lines for determining geographical locations had been devised, and the five sun-position lines which divide the surface of the earth into latitudinal zones had been plotted. All of these fundamental global solutions were applied by Ptolemy to his flat maps of the known world, which have survived, but no globe of his age exists today.

For more than 1300 years after the Ptolemaic age of mathematical reasoning and astronomical speculation, the globe received little attention from scholars or teachers. Such mental and physical activities as scholastic philosophy, pilgrim travel, military crusades, and coastal navigation required little knowledge or use of the globe for the achievement of their goals. The late Roman and early Middle Ages were indeed dark centuries in this respect. But with the great intellectual discoveries of the 14th and 15th centuries, and the new geographical discoveries of the 15th and 16th centuries, the globe became indispensable as a geographical map, a navigational aid, and a scientific tool.

Throughout the 17th century, the globe continued to develop as the finest cartographic expression of man's growing knowledge of the earth's surface. During the first half of the century, leadership in the art of globe-making was concentrated in the Netherlands. In the second half, however, English and Italian globes rivaled

those of the Dutch in both beauty and accuracy. Even today, the great globes of Vincenzo Coronelli, dating from about 1680 to 1700, rank among the largest and finest ever produced.

For more than 300 years after the discovery of America by Columbus, the globe developed steadily in scope and accuracy as the supreme cartographic expression of man's knowledge and conquest of the earth's surface. By the opening of the 19th century, however, the general outlines of the continents and oceans had been quite accurately determined, and the attention of the explorer turned to the interiors of the continents. Neither the exploration nor the settlement and development of continental interiors required much use of globes; for these activities, regional and local maps were much more functional. Consequently, during the 19th and early 20th centuries there was a steady decline in the educational use of globes until they became almost entirely decorative in both classroom and home. Those of us whose public education was acquired during the first quarter of the 20th century can testify reluctantly to the almost complete absence of any formal instruction in the uses of the globe, either as part of our elementary education or in teacher training.

During the second quarter of the 20th century, however, a series of events and developments gradually brought the globe back into use as a functional map of the world. Man's conquest of the air as a medium of intercontinental transportation made the great circle route between distant places a constant reminder of the mathematics of the sphere. Almost instantaneous world news via the radio developed an awareness, if not an understanding, of comparative time and calendar differences throughout the world. The global character of World War II in scope and strategy and the organization of the United Nations helped to create a world wide consciousness of the oneness of human affairs. And the analysis of cold war geopolitics brought the transpolar relationships of Eurasia and North America into sharper focus.

These and other cultural and political developments of the last quarter century have indeed created new popular and educational interests in the

**A globe in a cradle horizon showing the apparent position of the sun at each hour of the day, from sunrise to sunset, on November 3 or February 15 when the sun seems to follow the 15th parallel, south. The number of block dots above the horizon represents the approximate length of day for Chicago on the given dates. The observer is facing the noon sun, and his shadow will point north.**

# In The Space Age

A globe equipped as a free, removable ball in a cradle horizon mounting, with a hinged great circle or satellite blade. The setting shows a great circle or rocket path from Cape Canoveral, Florida, across London, 4400 miles distance. By adjusting and rotating the globe beneath the satellite blade, the relationship of any place on earth to any satellite orbit can be visually demonstrated.

globe as a spherical map of the world's political pattern. But with the launching of the first earth satellites in 1957 and the dawn of the age of space, the globe must once more receive attention and use as a model of the earth in relation to the universe.

The educational use of the globe as a scientific model of the earth in space requires several basic conditions: (1) a globe mounting which makes it possible to set the globe into a position corresponding exactly with that of the earth in relation to the observer and space; (2) a mounting which provides such necessary equipment as an artificial horizon and adjustable meridian, each marked off in appropriate scales of degrees, hours, and miles; (3) information with respect to the latitude position of the overhead sun for any day of the year and, for some purposes, the difference

in time between sun and clock for a given place and day (both of these facts are to be found in the traditional analemma on many globes, or may be obtained from most almanacs); (4) the understanding by teacher or student of how to adjust and manipulate the globe and its accessories so as to demonstrate and illustrate earth-sun and earth-satellite relationships.

A globe, mounted on its axis at a fixed inclination, or resting in a shallow cradle without a horizon, is almost worthless as a model of the earth in space. It must at least be a free ball in a cradle-horizon mounting. And both teachers and students must acquire understandings and skills in manipulating and obtaining information from the globe and its accessories.

For the study and demonstration of earth-sun facts and relationships as they exist for any given place or loca-

tion on the earth's surface, it is necessary to rectify the globe for the given location. This simply means that the globe must be adjusted so that the location in question is at the zenith or on top of the globe, with the North Pole of the globe pointing to true north. With the globe in this position (rectified for a given place or location), the following facts are true:

- (1) The globe is now an exact working model of the earth in space.
  - (2) All points and lines of reference on the globe are lined up with the corresponding points and lines in the heavens above.
  - (3) The axis of the globe is parallel to the axis of the earth, with the North Pole pointing to the North Star.
  - (4) Any great circle passing through the given location on the globe corresponds directly with the same great circle on the earth.
  - (5) The horizon ring of the globe is parallel to and now represents the rational horizon of the place on earth.
  - (6) When placed in sunshine, the sun's rays will strike the globe in exactly the same way that they are striking the earth at that moment.
  - (7) At any hour of the day when the sun is shining, a toy man standing at the zenith of the globe will cast a shadow exactly similar to that cast by a real person on the ground alongside.
  - (8) At any hour or moment of the day, the sun's rays will be vertical to the globe at the same latitude as is the case with the earth itself.
  - (9) In the classroom, the rectified globe becomes a laboratory instrument for determining the basic sun facts for any day: i.e. time of sunrise, time of sunset, length of day and night; altitude of sun at noon, etc.
- (10) By rectifying the globe for some other geographical location (i.e. Stockholm, Capetown, etc.) one can compare the basic sun facts of his location with those of the other location.

If teachers and students acquire a working understanding of earth-sun relationships for their location, they will have developed a basic foundation for the understanding of other earth-space relationships. The understanding and use of the globe in a rectified position is therefore one of the first steps to take in education for the space age.

Prepared by Carl H. Mapes who is Chief Map Editor of Rand McNally and Company.

# Some Notes On DAVI'S Ancestry

by William F. Kruse  
Archivist, DAVI National  
Committee on Archives and History

**T**O EVERY family there comes inevitably the day when little Davy (or Johnny or Sue) asks: "Where do I come from?" Today's parent is hardly embarrassed even when the query is raised in a biological context. Quite often, too, the right answer may be geographical—or genealogical. In the case of DAVI (his full name: Department of Audio-Visual Instruction, National Education Association) it's a bit of both.

Originally he was nicknamed "DVI." When he was born—that is, when he achieved official departmental status—at the Oakland meeting of the NEA, on July 6, 1923—he was by no means the first professional organization of the infant visual instruction field. There were at least four predecessors, two of them destined for another nine years to parallel and overlap the NEA's now official DVI, before the nation's visual instructionists finally united in a single professional organization.

In his comprehensive "Motion Pictures—Not For Theatres," printed serially in *The Educational Screen* from 1938 through May, 1944, Arthur E. Krows reports the formation of an "American Educational Motion Picture Association" in October, 1919, in New York City. Its membership included educators prominent in school and church fields as well as "commercial" people, among them the editors of two then existing magazines, *Educational Film Magazine* and *Reel and Slide*. The former soon disappeared; the latter, under a new name (*Moving Picture Age*) was absorbed in 1922 by *The Educational Screen*. Krows also mentions an apparently abortive formation, the same month, in Washington, D. C., of "The National Academy For Visual Instruction." In February, 1920, the "National Academy of Visual Instruction" was formed at Cleveland, by a group of pioneer workers in the visual field who were attending a meeting of the NEA Department of Superintendence.

Convention programs of the parent NEA included visual instruction sessions at least as far back as 1912. On that occasion W. H. Ives, of the Education Department of Thomas A. Edi-

The announced purpose of REEL and Slide magazine was — "To Make the Screen a Greater Power in Education and Business." Established in 1918.

son, Inc., demonstrated a classroom projector using a 22mm three-row safety film, Frances E. Clark, a music supervisor formerly with the Milwaukee schools, outlined there also the educational records program of the Victor Talking Machine Company. In February, 1920, the superintendents' meeting included a session arranged by the NEA's own "Department of Visual Instruction." Its president was L. N. Hines, State Superintendent of Instruction in Indiana; its vice-president J. H. Beveridge, Superintendent of the Omaha public schools; its secretary Charles F. Pye, of the Iowa State Teachers Federation.

## National Academy of Visual Instruction

It was at this Cleveland meeting in February, 1920, that the *National Academy of Visual Instruction* was conceived; its constitution was drafted on April 7, 1920, at the University of Michigan; its first formal meeting was held at the University of Wisconsin in July the same year. According to the program preserved in the DAVI Archives it must have been a most impressive two-day affair. The U. S. Commissioner of Education and the governor of the state were banquet speakers, the university's president delivered an address of welcome. The program took in much more than just formal classroom instruction. At least three of the topics dealt with visual communication in church and community; and one, presented in part by a representative of the General Electric Company, was on "Sources and Values of Industrial Films." There was a commercial trade show with 17 exhibits, seven each from projector manufacturers and film producers, three miscellaneous. Resolutions were adopted asking "an adequate Federal appropriation to be expended under government supervision for the production and distribution of films and visual aids." The employment of a permanent secretary was authorized "as soon as funds are available," a decision that took 25 years to realize. William H. Dudley, director of the Visual Instruction Department at Wisconsin, was chosen president; he was followed in that office by F. W. Reynolds (1921), J. W. Sheppard (1922), and Dudley Grant Hayes (1923).

The internal affairs of the infant "Academy" were not destined to run smoothly. By the time it held its second meeting, in Des Moines, Iowa, July, 1921, there were complaints that it was too mid-western, too collegiate, too snobbish in its attitude toward commercial people. The Academy very naturally reflected the composition of the visual field of its day. Of 45

distribution centers for educational motion pictures listed in *Moving Picture Age*, the Academy's official organ, 35 were college or university-centered, four were in city school systems and four were in museums. Seeking to broaden its geographical representation the Academy appointed 37 "state vice-presidents"—of whom all but six held posts in higher education, 23 of them in extension work.

The objectors in the main were visual instruction directors in city school systems, at first chiefly in the east, but soon reinforced by their colleagues on the west coast as well. Their duties involved them closely with the classroom teacher on the one hand, and with helpful commercial men on the other. The protests came to a head, in December, 1921, in the formation of the "Visual Instruction Association of New York." Its membership consisted largely of teachers serving under Ernest L. Crandall, Director of Lectures and Visual Instruction of the New York City public schools, on committees to evaluate visual instruction materials for their respective subject area. Commercial representatives cooperated actively in this work and enjoyed equal status with the educators right from the start in the New York organization, whereas in the Academy, in the words of president Shepard, this "simply is not done."

### Visual Instruction Association of America

The rebel movement took on national scope with the tentative formation, at Chicago in March, 1922, of the "Visual Instruction Association of America," with Crandall at its head. The Academy, holding its third meeting at the University of Kentucky a month later, gave grave consideration to the breach but could not heal it. That meeting, incidentally, by a vote that "seemed unanimous," went on record against the adoption of a narrow-width non-inflammable film for school use, and called for collaboration with theatrical film producers to encourage schools in small communities to take over the motion picture entertainment function, "eliminating those theatres that are a menace to the industry and to the morals of the community."

Anticipating possible failure of the NEA's own *Committee on Visual Education* to provide a visual program at the coming meeting of the NEA in Boston, the Academy leaders made preparations to do so. But this official NEA body, sometimes called "Department," sometimes "Section," sometimes "Committee," did have a program. The proceedings of the 1921 NEA meeting at Des Moines also con-

In October, 1919, REEL & Slide gained the new name of Moving Picture Age. In September, 1921, it became the official organ of the National Academy of Visual Instruction. In 1922 it merged with Nelson Greene's then year-old THE EDUCATIONAL SCREEN.

tain an extensive report by this "Section," and refer to it as having been "authorized" by the preceding, 1920, Salt Lake City meeting.

### The Judd Committee

At Boston the leaders of both Academy and Association lobbied actively, though separately, for the establishment of an official NEA Department of Visual Instruction. Their efforts were somewhat eclipsed by the aftermath of an address by Will H. Hays, newly appointed head of the Motion Picture Producers and Distributors of America. In response to the Hays' invitation, Will Owen, NEA president, appointed a "Committee on Visual Education and Co-operation with the Motion Picture Producers," headed by Charles H. Judd, of the University of Chicago.

Crandall was a member of the committee and headed a project to ascertain what material in the producers' vaults might have educational application. F. Dean McClusky, an outstanding Academy leader, made a

Nelson L. Greene, founder and editor of *The Educational Screen* until his death in 1947, and Past President of Department of Visual Instruction.

survey of the status of visual instruction throughout the country. On the matter of creating an NEA department, however, the Judd report recommended that a special visual education program be conducted at the next meeting of the Department of Superintendence "with a view to testing the interest in visual education and trying out the possibilities of organizing a Department." The preparation of this program was entrusted to H. B. Wilson, superintendent of schools at Berkeley, California, who drew with fine impartiality upon both Academy and Association for his speakers.

### Separate Paths

At the next superintendents' meeting, in February, 1923, the Academy staged its own three-day program. It was held in Room 216 of the Cleveland School of Education, some considerable distance from the convention center. The Association, with commercial exhibitor support, held open house at the headquarters hotel for "an unending stream of visitors," according to president Crandall, "ranging all the way from plain or garden variety of pedagogue, to real high-brow doctors of pedagogue from the halls of normal colleges"—a formulation not without its own disclosure. The Association also arranged a public showing of motion picture films in the mammoth public auditorium where such presentation was supposedly impossible.

(Continued Next Month)

The Educational Screen was launched by a group of educators, with Nelson L. Greene its founder and editor from 1922 until 1947. Its four-point policy was: "Impartial — Independent — Reliable — Authoritative."

## THE PANAMA CANAL

(Coronet Films, Coronet Building, Chicago 1, Illinois) 11 minutes, 16mm, sound, color or black and white, 1958. \$100 or \$55. Teacher's guide available.

### Description

This narrated film reveals the reasons for which Spain, France, and the United States made efforts to construct the Panama Canal — the long-dreamed-about link between the Pacific and Atlantic oceans which reduces the 5,500-mile journey around Cape Horn to a 50-mile trip across the Isthmus of Panama. It also pictures the basic operation of this great trade waterway and its lock system which enables thousands of ships to transport over 45 million tons of cargo each year through the canal.

After the film gives views of the canal and operations, an animated map traces the long voyage around South America which Spain in the 1500's had to travel to reach her west coast colonies. The Spanish attempt to gain a shorter route failed.

In the 1800's, the United States helped mitigate their problem by building a railroad across the Isthmus. In 1881, the French attempted the great task of building a canal through the mountains, jungles, and swamps. The heat, humidity, sanitation, and insects caused the death of 40,000 workers and the end of the work. Again in the early 1900's, when the United States realized that its growing naval and merchant fleet had to have easy access from ocean to ocean, the United States government got permission from the Panama government to build, occupy, and control a ten-mile wide canal zone across the Isthmus.

Historic films show workers building the canal using huge steam shovels and concrete mixers. Pictured are George Washington Goethals and Dr. William Gorgas who were respectively the Chief Army Engineer in charge and the sani-

tation engineer who drained the swamps and controlled the malaria mosquito. A short sequence pictures the passage of the first vessel in 1915.

Speeded-up camera action shows the operation of one of the locks — closing the gates, pulling the ship by electric car, and filling the lock. An animated sequence describes the operation of the six locks — three of which lift the ships 85 feet to Gatun Lake and three of which lower the ships to the opposite ocean level.

As the film follows a ship through the canal from the Pacific to the Atlantic, pictures and narration explain that fees are charged for each ship based on its size and amount of cargo, a pilot takes the ship through the canal, of the 3,400 employees who operate the canal system 3,000 are United States citizens, the United States alone is responsible for the canal's operation, and ships simultaneously go both ways through the canal. The two cities, Panama City on the Pacific and Colon on the Atlantic, are briefly pictured.

### Appraisal

The committee feels that this film gives a concise, interesting, introductory explanation of the history and the basic operation of the Panama Canal. The historic footage, animation, and time-lapse sequences contribute to the film's purposes. Intermediate through junior-high classes studying social studies or geography units concerned especially with water trade routes and economic considerations should find this film useful in giving the Panama Canal and similar man-made waterways their proper significance.

— Wayne Howell

## PEOPLE OF THE WESTERN SHORE

(Churchill-Wexler, 801 North Seward Street, Los Angeles 38, California) 16 minutes, 16mm, sound, color or black and white, 1956. \$150 or \$75.

### Description

The film briefly visualizes several aspects of selected industries and the people who work in them. Each separate occupation is viewed as giving something to other people while its workers use something produced by other people. At the conclusion of each sequence the narrator suggests certain places and kinds of people who may use the product. Continuity is maintained in the film by the pro-

gressive use of the products illustrated and by graphically following one highway, U. S. Highway 101, which runs close to the western shore from southern California through Oregon and Washington to the Canadian border.

A darkened orange grove in southern California is visited first. The camera pans over the grove to the house where a man after listening to a weather report checks a thermometer in the grove and starts a wind machine. A forecast of 27 degrees by 2 a.m. means that frost forming in the still air will spoil the oranges; however, the wind machine stirs up the air and keeps the frost from forming. Several daytime shots show oranges being picked, emptied into containers, and leaving the grove in a truck on Highway 101 and later being loaded into a boat. The narrator explains that the men will be away several weeks catching tuna. The film changes to show tuna being caught and jerked into a partially filled boat.

Returning to the highway and traveling into oil fields, **PEOPLE OF THE WESTERN SHORE** presents an oil worker and his son finishing breakfast while their lunches, including tuna fish sandwiches and oranges, are being packed. At the oil field a derrick is shown, a pipe is rolled into position, men are using huge wrenches to tighten one section of pipe to another, drills are turning, and pumps are going down and up. According to the narrator, the man, now eating a sandwich, is part of a great community each of whom is doing his share to produce something useful for others.

As the film follows the highway through miles of broad coastal valleys, it shows men at work in the fields harvesting a variety of vegetables as they work by hand or with machines that use the oil from the oil fields.

Several shots represent the activities of preparing to dock a freighter in San Francisco Bay, unloading products from the lands bordering the Pacific Ocean, and loading products from other cities. Tires made from imported chunks of rubber roll on the highway as it winds along cliffs rising above the sea and past orchards of fruit. This fruit is sent all over the country and to people along the western shore, across the Columbia River, and into the forests of the North, two thousand miles from the orange grove in southern California.

Here the journey ends as the film points out that the man and the chil-

dren have lunches containing tuna and oranges, the truck has rubber tires, the chain saw he is using to cut down the tree runs on gasoline refined from the crude oil of the oil fields. With other men he provides the logs and lumber shown on the various trucks and the lumber in the back of the station wagon turning into an orange grove.

A montage of scenes reviews the many different activities of the men along the two thousand miles as the narrator summarizes the ideas brought out by the film. He says that these men do not know each other but are bound together by their need for what each man by his labor can give. This, he says, is as true of people all over the world as it is of the people of the western shore.

#### Appraisal

This very informative film should be useful in a study of the United States on the elementary- and junior-high-school levels. Although the primary purpose of the film is to present an example of man's interdependence, the scenes of the countryside, the industries, and the other activities visualized will certainly add to an understanding of the geographic and economic diversity of the western states region. PEOPLE OF THE WESTERN SHORE should also be of value to high-school and college classes in discussing the economic interdependence of people and communities within a region, within a country, and with other nations. Each sequence is composed of enough characteristic activities to give a definite impression that the work being done is important in providing a product needed by the nation's economy. The sequences do not become too complicated with factual information to be unrelated to each other. The transitional devices are interesting, appropriate, and skillfully used to develop a continuity between sequences and the central theme of interdependence.

—Margie Gonca

## SIR FRANCIS DRAKE— THE RISE OF ENGLISH SEA POWER

(Encyclopaedia Britannica Films, 1150 Wilmette Avenue, Wilmette, Illinois) 29 minutes. 16mm, sound, black and white, 1957. \$150. Teacher's guide available.

#### Description

This is a photoplay of the dramatic highlights in the career of Captain Drake from the time he obtained his queen's blessing for his plan to attack Spanish ships in the Pacific waters to the event of his reward with knighthood.

It was in 1577 that England's Drake submitted to his sovereign, Elizabeth I, a bold plan to reduce the fortunes of rich and powerful Spain. Not trusting the queen's ministers, he told only the Queen and his two associates, Doughty and Diego. His proposal to sail around South America to attack Spanish ships and raid Spanish treasures required five ships and a thousand crowns.

Elizabeth cherished the idea of a revenge against the King of Spain, for she accused him of conspiring with her enemies in Scotland, cultivating discontent among her Irish subjects, and employing spies in her Court. Worst of all, he and the King of Portugal, "with the connivance of the Pope of

Rome," had divided up the New World among themselves without leaving a piece for her. She, too, would like colonies in America, but would not run the risk of war to get them, because "we cannot plant colonies if our energies are used up by war." Also, the British political leaders at that time were divided over the question of war with Spain. Small wonder that Elizabeth's policies seemed "wishy-washy," for she wanted neither open war nor submission to Spanish offenses. Elizabeth did, however, provide Drake with the money and ships for his expedition, but insisted that her unofficial blessing be kept secret.

Hardly had the sails been unfurled when talk of the navigational perils of the Magellan Straits planted the seeds of mutiny. The expedition halted on the coast of Brazil for the execution of mutineers. Here Doughty was tried and executed for inciting mutiny. He admitted a life devoted to plotting and intrigue. Before continuing the voyage, Drake addressed his men, telling them that he had granted Doughty's

last request to forgive any suspected accomplices and that he intended to keep his promise. He also said that dissension must stop, that "any who be pigeon-livered at the thought of Magellan's Straits" would be permitted to take the ship *Marigold* and return to England. The men reassured Drake of their loyalty; the ships weighed anchor.

Navigation of the Straits was treacherous, but the storm which burst suddenly upon them in the Pacific was worse. The *Golden Hind* was the only ship to survive the fifty-three-day tempest. Still the men voted to go on. Drake had to give up his grandiose idea of taking the Spanish Pacific fleet and capturing Peru and Panama. Instead, he decided to attack Spanish ships singly, relying upon the superior speed and maneuverability of his own ship. He took ship after ship in bloody combat; he looted and raided coastal settlements. By the time he had overtaken and captured the yearly treasure galleon, the hold of the *Golden Hind* contained approximately \$14,000,000 worth of gold, silver, and precious stones from the mines of Peru and Mexico. Drake's ship was now too heavily laden to fight, so he sought briefly the Northwest Passage through which to return to England. Upon failing to find such a passage, he sailed westward around the world to record the second circumnavigation in history.

Upon his return to England, the Spanish Ambassador, supported by Lord Burleigh, demanded that Elizabeth return the captured treasure and

cut off Drake's head. Elizabeth, becoming defiant, chose to knight Drake instead.

Appraisal

In order to present the events described above, the film exploits the story's dramatic potentialities by relying heavily upon reconstructed live action with lip-sync dialogue for most of the situations where conflict is involved. The dramatic style is appropriate, because conflict is the essence of this chronicle: conflict between Spain and England, between factions inside England, between Elizabeth's own dispositions, between Drake and his men, between Drake and the forces of nature, and between the swords of Spanish and English sailors. Professional acting, good direction, authentic sets, expert photography, and an imaginative sound track contribute to the finely polished dramatic episodes that make up the bulk of the film. Titles, maps, and montage, together with sparingly used narration, serve to orient, bridge, interpret, and summarize the sequences of dramatic conflict.

The film does an admirable job in presenting in a well-integrated manner the important items of historical information for the period in Drake's life that it chooses to treat. One could hardly expect more content in a film of this length and style. It is possible, however, that some users, judging only from the film's title, *SIR FRANCIS DRAKE — THE RISE OF ENGLISH SEA POWER*, might expect a larger slice of history. The film does not include the exploits of other "Sea Dogs" such as Frobisher and Hawkins, nor does it follow Drake through his important role in the crucial event in the rise of English sea power which was the defeat of the Spanish Armada.

The film is designed primarily for use in American and world history classes from the intermediate grades through college. Its integration in such curricula presents little difficulty. When used with younger audiences, the film's contributions to motivation should compensate for the uncommunicated facts which might be occasioned by the indirect manner of their presentation in the dialogue and by the unfamiliar patterns of speech. Indeed, the major values in using the film might be found in providing a background of common experience for class discussion and the stimulation of the individual's interest in seeking further sources of information.

The film's attention-holding dramatic style, its wide-audience range, and its twenty-nine minute length suggest utilization through television channels.

—Ledford Carter

# Looking at the Literature

**THE LIVELIEST ART**, Arthur Knight, MacMillan Company, N. Y., 1957, 383 pp., \$7.50. What started as a "three-hour-lecture delivered on a sweltering July afternoon at the University of Minnesota," illustrated with film clips from *Potemkin* et al, and spiced with encouragement from ace-director Rouben Mamoulian, emerges here as a sprightly, highly readable, fact and philosophy-crammed story of the entertainment film as an art form. Nontheatrical applications of the film are rather ignored except for avant-garde and experimental production. Especially valuable is the detailed, evaluated bibliography of 100 books, and the roster of 16mm film rental sources, coded into a comprehensive alphabetical title list. The author's concept of the educational motion picture as a "derivative form of film making" could prove vulnerable in an analysis of early cinematography, and his labeling the American documentary as a "depression baby" and dating its upsurge from the 1939 New York World's Fair may also draw some mild dissent. For comprehensive coverage of the evolution of the art of the theatrical film, and of the social conditions under which this development

took place, this is the latest and one of the most important works of its kind.—IVFK

**THE AUDIO-VISUAL EQUIPMENT MANUAL**, by James D. Finn, is written and designed specifically with the end user in mind. Proceeding from the premise that anyone "given the proper attitude, can learn to operate any piece of common audio-visual equipment in a very short time," the book gives detailed, illustrated, practical instruction on several models and makes of four chief types of AV equipment—motion picture projectors, playback equipment, tape recorders and miscellaneous devices. Each of these four major sections has a well (and generally amusingly) illustrated introduction—just enough of the "why" to give meaning and foundation to the "how" that follows. There is no trace of ivory tower inhibition; the book names names and prints addresses plainly. Colored dividers separate the four sections and each section is subdivided by tabs for the different types of equipment described. 363pp. Dryden Press, Inc., 110 W. 57th St., New York, 19, N.Y. 1957. \$9.50

**TOWARD THE LIBERALLY EDUCATED EXECUTIVE**, Robert A. Goldwin and Charles A. Nelson, eds, with foreword by C. Scott Fletcher. Fifteen leading educators and industrialists attest the need of a foundation of liberal education "without which executives will be unable to measure up to the challenges they confront and will continue to confront in the foreseeable future." Fund for Adult Education, White Plains, N.Y., 1957; 112pp. Single copies free, five copies free to educational institutions, thereafter 50 cents per copy.

**AV INSTRUCTIONAL MATERIALS MANUAL**, by James W. Brown and Richard B. Lewis. Spartan Book Store, San Jose State College, San Jose, Calif. Unique, practical, 3-ring binder format permits addition of local materials to this 292-page workbook.

**THE READING TEACHER'S READER**, by Oscar S. Causey. Ronald Press Company, 15 E. 26th St., New York 10. 339 pp. \$5.00. A textbook for reading methods courses and a reference book for in-service reading teachers. Sixth of book is on "Audio-Visual Aids in Improvement of Reading." Deals with methods, phonics, vocabulary, emotional factors.

## Stewart ONEPIECE Seamless REAR PROJECTION SCREENS

One of These Three Fits Most Needs

### LUXCHROME

FOR VIEWING slides or motion pictures under roomlight conditions; for business, education, research, advertising, display.

### PROCESS

FOR PHOTOGRAPHIC BACKGROUNDS; special effects in motion picture and commercial still photography.

### TV BLUE

FOR TELECASTING live action in studio against projected "location" backgrounds.

#### OTHER TYPES AVAILABLE FOR SPECIALIZED USES

STEWART... the screen preferred by 9 of the top 10 Hollywood motion picture studios... gives you brilliant, sharply defined rear projected images for either viewing or photographing.

You, too, can now have the quality of Stewart award-winning screens, born of the demands of critical motion picture and TV studio technicians. Here is the one truly *onepiece* screen for perfect rear projection, made in all sizes from table-top to large set proportions.

Specialists in professional screens: rear and front projection.

## BIOLOGY FILMSTRIP

"LOOKING AT CELLS," Syracuse University Audio-Visual Center, Colendale at Lancaster, Syracuse 10, New York. Filmstrip is color drawings. Grade range includes grades eight to twelve. Subject area is biology, especially study of human body. 28 frames.

Filmstrip consists of carefully drawn diagrams of all types of cells with well lettered captions that explain the material carefully. Filmstrip begins by showing parts that are common to all cells including the cytoplasm, the growth material of the cell; nucleus, which contains the substance that gives it likeness or difference to other cells; and membrane, which gives protection to the cell as skin gives protection to our bodies. The part blood plays in bringing food and oxygen to the cells and carrying waste materials away from the cells is explained. The differences between sizes, shapes and chemical make-up of the cells are shown by the following examples: bone forming cells, outer skin cells, smooth muscle cells, and nerve cells (which may be three feet long!). Animated "Mr. Chubby" (a cell), traces his life as he is eating and growing. After a while there is a change in his nucleus and he is divided into two cells and later into four. These Mr. Chubbies are shown doing many jobs in the head. Muscle cells are formed on bone cells that form the basic skull. Nerve cells are in between the other cells and the skin cells do their job by protecting all the other cells from germs and injury. The filmstrip ends by showing how millions of cells make up the entire human body. The filmstrip is excellent for beginning study on cells and makes it easy for the student to realize the importance of cells in our bodies.

rected for teacher training. Subject area includes audio-visual communication. Set includes three filmstrips as follows:

**EFFECTIVENESS OF AUDIO-VISUAL MATERIALS** (45 Frames)

**HOW TO USE A TEACHING FILM** (43 Frames)

**TEACHING BY TELEVISION** (51 Frames)

This series represents an attempt to summarize in an interesting and non-technical manner research findings on audio-visual materials. These findings include effectiveness and methods of use of audio-visual materials. This is an excellent series for use with groups which have had little experience with audio-visual communication. Many questions are answered, although some of the answers might be questioned. This series of filmstrips will definitely stimulate discussion.

## FRENCH LITERATURE FILMSTRIP

"MOLIÈRE'S LE MISANTHROPE" (Number 5205), Educational Productions, Limited, 17 Denbigh Street, London, S.W.1. Filmstrip is black and white. Grade range includes junior and senior college possibly including high school seniors. Subject area is French literature and drama. 51 frames.

This filmstrip is very beneficial for detailed study of Molières writing, stage settings, social life of the times, and other studies of the man. This filmstrip is too detailed and critical for any except very studious and serious students of drama. The professor, J. T. Stoker of the University of Paris, himself says Molières "Le Misanthrope" necessitates a maturity of mind rarely found in adolescents. The notes found with the filmstrip give detailed explanations of characters, motives, plots, settings, etc. They are very helpful to the teacher and the filmstrip shows very careful production and photography.

## AUDIO-VISUAL COMMUNICATION SERIES

## COLONIAL WILLIAMSBURG SERIES

"THE CRAFTSMAN IN COLONIAL VIRGINIA," Colonial Williamsburg Filmstrips, Post Office Box 516, Williamsburg, Virginia. Filmstrip is in color. Grade range—Fourth through twelfth grades. Subject area—American History. 44 Frames.

This filmstrip is especially designed for use with a social studies unit. It gives a true picture of colonial life, the setting for which is Colonial Williamsburg, Virginia. The buildings, streets, costumes, etc., conform to historical data. The prime concern of the filmstrip is the variety of craftsmen represented within a given colonial community. The latter portion of the filmstrip is devoted to the subject of George Wilson, a bootmaker, and his family. The Wilson family is used to exemplify: 1) colonial family life, 2) colonial society, 3) economic conditions, 4) apprentice education, 5) working conditions, 6) other community crafts, and, 7) slave conditions.

This filmstrip would be useful with the following suggested units: 1) Colonial Craftsmen. 2) The Colonial Middleclass. 3) Colonial Life. 4) The Colonial Businessman. It may also be used as a picture reference for: 1) colonial tobacco farms, 2) log cabins, 3) plantation communities, 4) colonial workshops and tools, and, 5) colonial fashions. Because this filmstrip is adaptable for many purposes and makes the subject very interesting to the viewer, it rates a superior rating for production.

"COOKING IN COLONIAL DAYS," Colonial Williamsburg Filmstrips, Post Office Box 516, Williamsburg, Virginia. Filmstrip is in color. Grade range—upper elementary and junior high school. Subject area covers early American history. 46 frames.

This filmstrip shows the kitchen and cooking devices used by well-to-do people in colonial Virginia. The kitchen reveals much about the customs and economy of those days. Comparisons are drawn between colonial "labor saving devices" and those which are in use today. Vivid color and good photography make this a pleasant filmstrip to view. The guide provides much information in addition to the frame captions. This filmstrip should be of high interest to American History students even as low as the middle grades.

*Editor's Note: The other filmstrips in this series will be reviewed in a later issue.*

## FILMSTRIP ON T.V.A.

"THE STORY OF T.V.A.," Visual Education Consultants, Madison 4, Wisconsin. Filmstrip is in black and white. Grade range—upper elementary, high school and adult groups. Subject area—natural science (conservation and water power). 42 Frames.

Filmstrip tells the story of the T.V.A. in detail. It tells how the Tennessee Valley Authorities work to navigate waterways, control floods, and produce electrical power. The captions under each picture did not always seem to correspond to the subject matter pictured.

In order for this filmstrip to be of value to the class, the viewers should

have some experience in map reading. It may be considered useful if used in connection with a unit on T.V.A. or as a picture reference for dam or waterway structure. Because of the above mentioned discrepancies, this filmstrip is not highly recommended.

## THE AMISH

We are advised that the color filmstrip advertised in the February issue is available also in 2x2 slide form. Interesting reading notes, indexed to the slides by number, increase the variety of uses which slides may serve when individually selected by the teacher. For further information write Photo Arts, 962E Salisbury Court, Lancaster, Pa.

## Foreign Language Recordings

The flow of foreign language recordings of potential instructional value continues. It is steady, even and impressive . . . and indicative of the broad acceptance of the phonograph recording as a prime instructional tool in foreign language instruction. In this same area there is a great increase in the development of the language laboratory type of installation in secondary schools and colleges which allows individual students, regardless of ability, to progress at a personally established rate, either consistently or sporadically. Further, the language laboratory encourages review and true mastery of foreign language material.

Many schoolmen have asked for suggestions concerning appropriate equipment to be included in a modern language laboratory establishment. It is impossible, first, to specify quantities because these factors will be governed by the number of students involved as well as the number of languages involved. Further, it will have to be administratively determined whether the language labora-

tory is solely for the use of foreign language students or can be employed for speech correction activities and a variety of other listening-recording-listening instruction in such areas as music, speech improvement and drama. Further, is the installation to be installed in the library or as part of the language classroom establishment?

Minimum requirements include appropriate phonograph equipment for reproducing discs in the laboratory collection. This machine or group of machines should be planned for either individual listening via headphones or for group listening via loudspeaker. Just as an individual alone may profit more from loudspeaker reproduction, so a group of several students may prefer to use headphones. The equipment should be versatile in this regard so that small groups may use headphones if they prefer or if loudspeaker listening will annoy other students.

Recording facilities are needed. The experience of recent years indicates the superiority of the magnetic tape recorder for this purpose over any other machine. It is common practice now for schools to purchase dual track, dual speed machines for recording purposes. However, it is also common practice to standardize on one speed for these purposes according to local needs and to record on one side of the tape only if editing is indicated in the future. Tape recorders and playbacks, too, should be so equipped that they can be used with either headphones or a loudspeaker.

The recordings chosen for study will depend on the appraisal of such materials by the instructional staff. In previous issues of **EDUCATIONAL SCREEN & AUDIO-VISUAL GUIDE** we have reported to you on approximately two hundred hours of recordings. (See issues of October and November, 1953; June, September and October, 1954; January, 1955; March

albany 1, new york

and October, 1956; and, February and April, 1957).

There is a welcome, constant and strengthening trend toward the introduction of foreign languages in the elementary school. That trend has reached proportions that now there are competitive children's records on the market designed to appeal to children in the earlier grades. A new technique is involved too, the technique of H-R-S . . . Hear . . . Repeat . . . Speak.

"ITALIAN FOR CHILDREN," "FRENCH FOR CHILDREN," "SPANISH FOR CHILDREN," and "GERMAN FOR CHILDREN" are four new albums published by Oppenheimer: Publishers of Baltimore, Maryland and intended specifically for young children. The emphasis, obviously, and to our mind quite correctly, is placed on aural comprehension and imitation through sound. It is not necessary that the child see or be able to read the accompanying manual, although the illustrations are intended for youthful eyes and may be used as an integrating factor.

The individual albums are much alike in the material presented, involving normal children's interests and activities. There is the exchange of names; recognition of the dog, and the cat; family; counting; clothing; birthdays; food, and movies. Each album offers a variety of voices.

The albums are carefully prepared to develop and maintain interest. The material and presentation is suited to beginners, and, as we have already indicated, the content is directed to the elementary school.

The Italian, French and Spanish albums offer exceptional speaking and fine pronunciation. We found the German, however, somewhat muffled by comparison. The Spanish pronunciation employed is Latin American, typical of what our children most likely will hear and employ.

These albums are prepared by an outstanding body of language educators including, as editor-in chief, Dr. Frederick D. Eddy of the Institute of Languages and Linguistics, School of Foreign Service, Georgetown University. Dr. Eddy's interest in this program is of long duration and these recordings represent years of activity in the field of language instruction to children.

The Associate Editors include Dr. J. Donald Bowen of the Department of State, Dr. Hans Hainebach of Union College, Frank M. Soda of the Modern Language Department of the Princeton Borough (N.J.) public school system, Anne Slack who has coordinated the foreign language program for the Schenectady (N.Y.) public elementary schools and Mary P. Thompson who is on the Foreign Language Elementary Schools Com-

mittee of the Modern Language Association.

Children will find foreign language instruction a treat with the use of these recordings.

Moving along with more difficult records the D.C. Heath Company's "FOUNDATION COURSE IN SPANISH" is an excellent group of recordings designed particularly to accompany the text, also published by D. C. Heath, of the same title. These recordings should be used with beginning students in secondary schools.

Wilmac Recorders (Pasadena, California) have produced "CIRCLING THE GLOBE WITH SPEECH—SPANISH III" to accompany their earlier similarly titled recordings. This is an exceptionally clear and fine recording which secondary school students in second and third year Spanish classes can employ with profit for comprehension in the foreign language. The recording offers both Latin American pronunciation (from Cuba, Venezuela, and Puerto Rico) as well as Castilian pronunciation (from Salamanca, Seville, Barcelona, Madrid and Toledo). This recording is recommended not only for classroom use but also for language laboratories and library collections. The voices are those of men and women speaking naturally in relating personal incidents.

how  
tape  
recording  
helps you  
teach

**LANGUAGE  
ARTS**

There are hundreds of ways you can use a tape recorder to help you teach language arts. Here are a few suggestions.

- Speech classes can be made more exciting by playing tapes of noted commentators and personalities recorded from radio and TV. Have the class analyze the devices the speaker used to dramatize his important points.
- Letting students record their themes will help the authors detect their written and oral errors as they hear the playback.
- In the lower grades, hold up a picture and make a tape recording as the children tell what they see. Listening to these tapes will show which children have speech defects or problems that you may not notice in class.
- Record compositions at start of term. Save them to play back at the end of term, so students can note their own improvement in reading, diction, delivery and use of more interesting expressions.
- Have students write original poetry and tape it for playback at an "Open House Night" — an interesting addition to the usual display of handicrafts and artwork.
- Class discussions can be facilitated by breaking down the class into a number of smaller groups and tape recording the discussions of all groups for later analysis.

The sound quality of a tape recording can be no better than the quality of the tape on which it is recorded. Educators' critical requirements for fidelity of reproduction and consistent quality are easily met by any of the eight types of Audiotape. This complete line of professional-quality recording tape offers the right recording time and the right tape cost for any application. And, regardless of type, there's only one Audiotape quality — the finest that can be produced. For free tips on tape recording, write for "The Pocket Guide to Tape Recording." Write Audio Devices, Box EV, 441 Madison Avenue, New York 22, N. Y.

# Church department

by WILLIAM S. HOCKMAN

## In Our Opinion

... That remarkable little film, *The Candlemaker*, deserves all the praise and recognition which it is getting. In these columns (June 1957) we awarded it an "A Plus" rating and congratulated the United Lutherans on its production. At Green Lake in September Noel Evans accepted my re-appraisal of the film as "a little classic." Having accumulated a number of distinguished awards for excellence, this classic film on stewardship for children (and adults) is now available through Cathedral Film's nation-wide distribution system. This is a three-way break: for Cathedral, for the film, and for users across the country and world.

—O—

... Now is the right time for churches and distributors to use the A-V materials geared to this year's study of missions overseas and at home: "Japan," and "Christ The Church and Race." In few years has good material been more abundant. Filmwise we have *Younger Brother* and *Broken Mask*, both new productions of good general qualities. Beyond these we have a number of titles only several years old but still very useful. In filmstrips we lack for little. Yet, there are whole areas of the church which have not gotten around to using this material. Even now we get letters asking about the availability of materials related to the study—showing that the churches, as denominations, have not been getting information out to the churches and into the hands of the right people. Many film libraries have failed in promotion, also. It takes more than one folder, leaflet, catalogue; and all material, to be effective, must reach the potential user's attention. That alone counts.

... It is a good idea for the Curriculum Committee of the Methodist Church to study the "effectiveness of films and other audio-visual materials in Christian education." Approved in December 1957, and now in the preparation stage, this study will reach the participating churches about October 1958. Sixty churches, a true cross-

section of the denomination, will be selected for study. The results will be presented to the December 1959 meeting of the 117-member Curriculum Committee. In our opinion, one finding of this study will be that the quality of utilization will rate far below the inherent quality of both materials and equipment. If it misses this datum, it will have been fishing with too coarse a net.

—O—

... Many alert churches and A-V producers and distributors will make a note right now of the mission study themes for the next two years. For the year beginning in the fall of 1958 the themes are: "The Near East" and, "North American Neighbors;" whatever that means in the jargon of the NCC! For the year beginning in the fall of 1959 we have: "Africa" and, "The Church At Work In Town and Country"; whatever that means! In our opinion this nebulousness in stating the 'home' themes is a downright handicap to the churches and those who would serve the A-V needs of the churches. The overseas themes are specific enough. Why the lack of it at home? To get back to our main point, now is the time to spot films and filmstrips, and other materials, which will be useful as the calendar brings these themes to the fore. As in the past, special films will be produced to undergird these subjects. However, the "Audio-Visual Resource Guide (NCC publication) lists good and useful old materials like that beautiful film, *South of The Clouds*, whose locale is the American University at Beirut and whose theme is the impact of Christian ideals upon a Moslem girl of wealth, social prestige, and sensitivity for the needs of her people.

## Critic Vs. User

"As a public school teacher," writes Raphael W. Wolfe, A-V Coordinator for the Montebello (California) Junior High School, "who uses filmstrips. I found little enlightenment in Mr. Hockman's explanation. The 'bridge' which he sets out to build between the two viewpoints (critic versus user)

appeared to lead to a one-way road with all the traffic routed in favor of the critic.

At the risk of sounding trite, I feel that a good rule-of-thumb is still found in the old saying about the proof of the pudding being in the eating. The user of filmstrips is no longer a layman. As he uses them, sees the reaction to them, and senses their good and bad points, he comes into a better position to analyze them than does the critic who, from his ivory tower, too often deals with the theoretical without enough attention to the practical application.

I do not mean to contend that there is no place for the critic. He may, with his more technical knowledge, be able to offer constructive suggestions for improved techniques of photography, psychological approach, etc. But, his judgment should be tempered by use and recognized for just what it is—*one man's opinion!*"

This is a good and welcome letter. We are grateful for it because it can keep alive this discussion of critic vs. user. We believe that there is a place for both, and that each must be appreciated for what he can contribute to the production and improved use of visual materials.

However, many of us have lived long enough to see lay users toss aside excellent materials because they did not appeal to them. They were rejected on rather flimsy grounds. Again, we have been around long enough to see imaginative and resourceful users wring a lot of juice out of what we thought was a pretty dry lemon.

I would like to suggest that the theoretically good filmstrip (one that meets the criteria of the critics) will tend also to be the practically good filmstrip (one that meets the approval of the user). What bothers me is that you can reverse this proposition: What the user considers practically good will not tend to be theoretically good (good in the sense that it exploits to the full the essential and unique qualities of the filmstrip as a visual medium).

Can't we have a few more letters

on this one? Who is next? Dash off your thoughts and send them along.

## For Your Library

For years to come every church will need to explain to its children and young people (and, indeed, most of its adults) the meaning of Lent. Year in and year out this explanation will be one item in the curriculum of the church. This is one reason why we recommend SVE's new 38-frame color filmstrip with LP recorded commentary (and printed script-notes), *The Meaning of Lent*, just completed and released.

There are several other reasons for our recommendation. Such a filmstrip is a good idea. It fills a need. Next, SVE has done a good job on it. The art work, by Matilda Breuer, is good in composition and dynamics. The colors are pleasing all the way, except in one or two frames. (For instance, the close-up of Jesus holding the Cup. Drawing hands and getting flesh tints on filmstrip is very difficult, indeed)

The commentary, by Weldon Johnson, is a good job. It is good in two ways: It hits the main points, and it sticks to its subject — the meaning of Lent (not Easter, not the Resurrection, etc.). It is rather well integrated with the pictures, and it certainly is pleasingly and effectively narrated by John Mallow (who noted that a change in voice-tension was needed as he came into the intimate scenes of Holy Week).

We like the script-notes because they give background information; references for reading and study; and, give good suggestions for utilization. And, the print is large enough for easy reading, a bonus all producers ought to afford. Lastly, we like the little four-note frame-advance signal on the record, and found that we soon enacted to it subliminally, leaving our attention free for other things.

(Running time 12 minutes; complete with guide and record, \$10.00; filmstrip and guide only, \$6.50; order through your A-V dealer, or direct from SVE, 1345 Diversy Parkway, Chicago 14.)

## Men Of God

SVE has continued its "Great Christian Missionaries" series with the release of *Albert Schweitzer* (Jungle Missionary) and *Toyohiko Kagawa* (God's Man In Japan). The full-color art of both is by Esther R. Bell; the scripts by Virginia Stumbaugh; the music by Venida Jones; and, the narration by Frank Babcock.

Here is an effective and useful presentation of the life and work of two great contemporary Christians. Launched by an engine of purpose in an orbit of human service, these two men will be for many generations great examples of the dedicated Christian life. The age level is Junior and up.

Because of their fine qualities and their usefulness with many different kinds of church groups, they are recommended for purchase by your A-V library. Each filmstrip with utilization guides only is \$6.00. Each with LP recorded commentary is \$9.00. The complete series (which includes similar filmstrips on Frank Laubach and Adoniram Judson) is \$22.00 with printed scripts and \$28.00 with LP records. Order through your A-V dealer or direct from SVE, 1345 Diversy Parkway, Chicago 14, Ill.

## Spring Is Here

*The Story of Spring* is a filmstrip which can help you accent three things in the religious education of children: Help them feel the wonder and the new life which comes in Spring; help them see and appreciate the beauties of nature about them; and, help them identify God as the source of beauty and the Creator of new life. The full-color photographs (33) are by Jack Alford and the commentary, LP recorded as well as printed, is by Paul Kidd. Included are familiar songs, poems, and scripture which can act as a bridge to the new things presented. The age range is 5 to 8 years. Recommended.

The little book, "Ke Sooni," by Friendship Press, was the source of the beautiful 25-frame color filmstrip *The Easter Song* which was first produced by the United Church of Canada and is now available from SVE. It takes us to Korea and shows us Ke-Sooni's school, and her home, and the grandmother who finally let her wear the new dress to the Christian school and sing the Easter song with the other girls. Primary children will enjoy this story and its lovely pictures. Since the LP record carries the song which the girls sing, it can be taught

## Scratches

## on Film

## Irritate

## Audiences

Fortunately, scratches can almost always be removed — without loss of light, density, color quality, sound quality, or sharpness.

## Let The Children See

Every now and then someone wants to know about films for little people which will open their eyes and minds to the wonders of the world and life about them. Here are two that do just that thing, and do it well. *Mr. and Mrs. Robin's Family* is 11 minutes with this beautiful, busy, and friendly bird—showing the summer cycle of nest building, egg-laying, hatching, nestling-feeding, and the first ventures

outside the nest. And what a good look we get! This the children will enjoy—this screen-seeing which is better than most children get a chance at in real life. Highly recommended. (From Coronet Instructional Films, Coronet Building, Chicago 1, Ill.)

## Films For Enjoyment

It sometimes happens that youth and adult groups want films for the purpose of simple enjoyment only. Of these there are many—available, as the two following titles, from Association Films (Ridgefield, New Jersey) and Modern Talking Pictures (45 Rockefeller Plaza, N. Y. 20). *New England Portrait* is a 28-minute camera-tour of this region. *Living Circle*, 22 minutes, tells us about the flow of trade be-

tween North and Central America, and shows us some of the imposing monuments of the Mayan civilization which rested far too much on a one-crop economy and far too little on trade with neighboring areas. Both are in color; both interesting and informative, and “free” from A. F.

## Crossroads Of Three Continents

With the Near East the overseas subject of study by the churches of America next fall, here are three titles which should be of interest not only to local churches but to the local film libraries serving the churches: *The Middle East* (Crossroads of Three Continents), *The Mohammedan World* (Beginnings and Growth), and *The Holy Land* (Background for History and Religion). Each is in color or B&W; 13½ minutes for the first and 11 each for the others. (From Coronet Instructional Films, Coronet Building, Chicago 1, Ill.)

The first is a good overview of the lands and peoples of the Middle East, stressing three important factors—water, oil, and land-bridge for intercontinental travel. The approach is regional, rather than country by country; and, the relation of this region (ten countries) to the rest of the world is pointed out in many ways.

The second film has as its purpose “to develop an understanding of the riches of Moslem culture and of the many contributions it has made to our way of life.” It touches history, religion, art, politics and language. Intercultural influence is the theme stressed.

The third film is a tour of the land of ancient Palestine which orients us to history, literature, and geography. We see ancient places and old ways and come to appreciate the past and the present of this biblical country. Here history and geography get the emphasis.

For use in the church, we would place the grade level as Junior Hi and up. We recommend these as three good and useful films. Utilization guides supplied.

## Cats, Cats, Cats!

Kindergarten and Primary children will enjoy the filmstrip by Weston Woods Studios (Westport, Conn.) entitled *Millions of Cats*, and its best church use is, no doubt, in a party of recreation context. However, there is a nice little moral which most children will not miss. Forty-four frames of B&W art and a reading script; \$4.00; order direct.

## ANNOUNCEMENT ON PRICE POLICY

Despite the recent increase in prices of films announced by some distributors, our prices will not be changed during the coming year nor as long as our costs permit.

We know that most audio-visual budgets go up very little from year to year so that the immediate effect of a price increase will be fewer prints for you for the same number of dollars. As there are only a certain number of dollars to be divided, most producers of films stand to gain rather little from the increase in prices.

In view of the very real damage to film buyers, we feel that any modest advantage which the producers might gain is not justified.

Our desire to keep film prices down is not altruism. It is, we think, enlightened self interest based on a genuine concern for audio-visual education.

We are holding the line. *We hope that we will not be alone.*

**News in the Trade**

**COLBURN BROTHERS DIVIDE**

The film production activities formerly centered at the George W. Colburn Laboratories, 164 N. Wacker Drive, Chicago will henceforth be carried on by the new firm of John Colburn Associates, Inc., 1122 Central Avenue, Wilmette, Illinois. John is president of the new firm and Henry Ushijima is vice-president. All laboratory activities continue unchanged at the Chicago address under direction of George W. Colburn. This friendly separation of function was announced at a party, where silver trays were presented to John and Henry, commemorating their 21 and 10 years of service, respectively, in the Colburn organization.

**R.K.O. SHORTS FROM F.O.N.**

Maurice T. Green, president of Films of the Nations Distributors, announces that 50 short documentaries originally released by R.K.O. are being made available in 16mm, for the first time, for distribution through AV dealers. Educational as well as entertainment subjects are included. There are such titles as **The Future is Now, Her Honor — the Nurse, Polar Outpost, Alert Today — Alive Tomorrow.** A 50-page detailed catalog may be obtained from Films of the Nations, 62 W. 45th St., New York 36.

**PRE-RECORDED DEMONSTRATION**

The Magnetic Recording Industry Association, according to Edward A. Altshuler, in cooperation with the National Audio Visual Association, is planning a pre-recorded stereo demonstration tape for dealer use with teachers and school boards. Maintenance and operation standards for tape recorders are another project of MRIA. There will be an MRIA exhibit at the NAVA Trade Show, MRIA, 1555 N. Bronson Ave., Los Angeles 28, Calif.

**MINES FILMS REACH 14,000,000**

The circulation of the U.S. Bureau of Mines films reached a new high in 1957: a total audience of 14,000,000 saw the bureau's 58 films in no less than 237,128 showings. This is a gain of more than 10,000 over the previous high established in 1956. In addition to these group audiences an estimated 18,000,000 persons saw the films on non-commercial television, according to bureau director Marling J. Ankeny. A total of 6,200 prints, all provided by private industry, is in circulation by the bureau and its nearly 150 cooperating non-profit distributing centers.

**Our Experience Is Your Key to Service & Dependability**

**CAMART DUAL SOUND READER**

- Edit single and double system 16mm or 35mm optical sound.
- Edit single system Magnastripe or double system magnetic sound.
- Use with any 16mm motion picture viewer to obtain perfect lip-sync matching of picture to track.
- Works from left to right or right to left.
- Magnetic Model
- Optical Model

**\$195.00**

**CAMART TIGHTWIND ADAPTER**

- Eliminates cinching or ABRASIONS
- Winds film — No HOLDING
- Fitted to any 16 or 35mm rewinds
- Only tightwind operating on BALL-BEARING roller.

**\$29.00**

**SCHOOL PROJECTIONIST CLUB SUPPLIES** — Award Certificates, Club Cards, Identification Pins, Logs, Manuals. The School Projectionist Club of America, Box 406E, State College, Pa.

# Check these 10 points in selecting 16 mm sound projectors

QUESTION	WHY THIS IS IMPORTANT
1 Does it have color-coded threading?	<input type="checkbox"/> Makes threading and operating fast and simple, even for beginners.
2 Does it have safety film trips?	<input type="checkbox"/> Stops film movement instantly in case of film emergency. Guards against costly film damage.
3 Does it have Hi-Lite optical system?	<input type="checkbox"/> In connection with Mark II shutter, throws 38% more light on the screen. Assures bright pictures even in hard-to-darken rooms.
4 Does it have stationary sound drum?	<input type="checkbox"/> Assures clear, smooth sound. Has no moving parts to get out of adjustment. Scans full sound track.
5 Does it have visible one-spot oil system?	<input type="checkbox"/> Transparent filling tube shows oil level. Reservoir automatically feeds oil to all points as needed.
6 Are both reels mounted on top of projector?	<input type="checkbox"/> No overhanging reels to present a "traffic hazard." Projector can be set up on any level surface, even the floor.
7 Does it have single drive sprocket?	<input type="checkbox"/> Eases film stress, because same sprocket controls film entering and leaving projector.
8 Does it have compensating film shoes?	<input type="checkbox"/> Automatically adjust themselves to varying film thicknesses. Guard against splices catching.
9 Does it have 180° swing-out lens?	<input type="checkbox"/> Facilitates threading and cleaning of both aperture and film channel.
10 Is it adaptable for magnetic recording?	<input type="checkbox"/> Complete magnetic recording on film and playback can be added at any time by simply connecting Victor Magnesound.

**ONLY VICTOR OFFERS SO MANY IMPORTANT FEATURES**

The above 10 points give a quick picture of the advanced features you should expect in a modern 16 mm sound projector. Only a Victor brings you *all* of them. And with every Victor you also get the "standard" features of all quality sound projectors, including 2 speeds for sound and silent film, still picture, and reverse projection.

Particularly important is Victor's new red, white and blue color-coded threading. Color lines on projector clearly show where to thread and the sequence of threading. Other time-proven features—exclusive with Victor—are safety film trips, top-mounted reels, and power rewinding with no change of belts or reels.

Victor was first to develop 16 mm projectors and through the years Victor has been first to perfect improvements that assure finest pictures—finest sound—easiest operation. Victor long has been the choice of A-V experts in 73 countries.

**Victor Assembly 10** — Lightweight projector for small audiences. Amplifier operates at 10 watts continuous output, 18 watts peak. Available with 9" speaker, top-mounted and fully baffled—or separately cased 12" speaker as shown.

## NEW VICTOR VIEWER

The first professional 16 mm viewer with "frame counter" priced under \$100. Large 3 1/4" x 4 1/4" screen is brilliantly lighted by 75-watt lamp. Equipped with f2.8 triplet lens. All optics coated.

**ONLY \$92.00**

**FILMOSOUND SPECIALIST**

# 399

This is the only sound projector that "zooms" the picture to fit the screen. It reverses for review...threads in seconds...shows still pictures...requires no oiling. It's the newest achievement in sight and sound! See it in action!

The "399" is the most versatile 16mm sound projector available today. As the chart below shows, it offers more advanced features, more exclusive features, than any other projector. In over-all quality it has

no parallel, yet its basic price is only \$499.95. It is the finest value of all sound projectors. Ask your A-V dealer to demonstrate, or write Bell & Howell Company, 7117 McCormick Road, Chicago, Illinois.

PROJECTOR	ZOOM LENS	FIVE SAPPHIRE MOVEMENT	ELECTRICAL REVERSE	BRILLIANT STILL PICTURES	FACTORY SEALED LUBRICATION	AUTOMATIC REWIND RELEASE	SINGLE FRAME DRIVE AND COUNTER	TOP MOUNTED REELS	HOUR METER	AUTOMATIC LOOP SETTER
399 SPECIALIST	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes
BRAND A	No	No	Yes	No	No	No	No	No	No	No
BRAND B	No	No	No	No	Yes	No	No	No	No	No
BRAND C	No	No	Yes	No	Yes	No	No	Yes	No	No
BRAND D	No	No	Yes	No	Yes	No	No	No	No	No

- 1.** Exclusive new "zoom" lens\* (f/1.6) adjusts picture size to fit screen without moving the projector. One lens serves for different size rooms.
- 2.** Sapphire parts at five film handling points deliver 400% longer life . . . years of trouble-free service.
- 3.** Reverse operation for more effective instruction. Operator can stop, review, then reverse and view again.
- 4.** Rewind release automatically sets projector for "forward" after rewinding. Extraordinarily fast, 399 rewinds full hour's show in 2 minutes.

- 5.** Still picture clutch lets you stop film on single frame for indefinite period.
- 6.** "Cold Glass" heat filter\* gives 7 times brighter still picture image.
- 7.** Single frame drive\* lets you advance or reverse, frame by frame, for slow motion study and discussion.
- 8.** Frame counter\* lets you measure elapsed time for any sequence.
- 9.** Factory sealed lubrication eliminates need for oiling.
- 10.** Automatic loop setter\* eliminates "fluttering;" reforms loops without interrupting show.

- 11.** Hour meter\* records running time; aids scheduling.
- 12.** Threading is so simple that even a child can do it.
- 13.** Top mounted reels let you set up on any table or desk without dangerous overhang.
- 14.** Powerful 15 watt amplifier for full volume in large auditoriums. Will power 2 large speakers.
- 15.** Convenient self-contained speaker can play within case or from any point in the room.

**Q.** What's the most versatile of all tools for teaching?

**A.** A tape recorder right in the classroom! (See p. 180.)

**Q.** Which is the most versatile of all tape recorders for teaching?

**A.** The NORELCO 'Continental' three-speed dual-track tape recorder!

**Q.** Why is the NORELCO 'Continental' the most versatile of them all?

**A.** Its three speeds cover every classroom need from speech to music\*.

**NORELCO®**  
**'Continental'**

world's most advanced  
all-in-one portable tape recorder

**\*3 speeds for versatility**

**1 7/8**  
inches per second  
designed for speech—with the ultimate in tape economy (up to 8 1/2 hours of recording on a single 7-inch reel)

**3 3/4**  
inches per second  
the perfect "compromise" speed—giving good fidelity plus excellent tape economy on both speech and music

**7 1/2**  
inches per second  
for genuine high-fidelity music reproduction—ideal for instrumental and vocal coaching

For the name and address of your nearest 'Continental' dealer, write to:

# More than 40 schools and colleges use GPL/NTS TV equipment

## INVESTIGATE!

See a demonstration in your own school!

**1. YOU'LL SEE** the best in closed circuit TV equipment, made by GPL, one of the leading manufacturers of military, broadcast, industrial and instructional TV. You'll see the GPL View-Finder Camera — of highest quality; meets professional broadcasting standards. Like all General Precision Laboratory TV equipment, it is simple to operate, dependable, efficient, versatile, and economical

**2. YOU'LL SEE** a full line of cameras and accessories for all closed circuit uses — the most complete line available anywhere. Fixed classroom camera shown (at Port Chester High) operates unattended, clear pictures give every student a "front-row" seat at science, shop or other demonstrations.

**3. SINGLE UNIT CAMERA** by GPL, a system with built-in controls, complete in itself. Add-to feature permits the addition of accessories as needed.

**4. BRIGHT, WALL-SIZE PICTURES** are available by using the GPL Projection TV System. As few as 100 and up to 1,000 students, teachers, and parents can easily watch closed circuit programs, or educational broadcasts "off the air," in school auditoriums, or in large, multi-purpose rooms.

**5. YOU'LL GET** the most comprehensive service for all your TV needs from Educational Television Products, a division of National Theatre Supply — a GPL sister-company. NTS has branches coast to coast; a collect call will promptly bring a technically trained NTS man anywhere to help you plan a tailor-made system

**6. NTS** assumes complete responsibility for delivery and installation, and the man from NTS instructs students and teachers in the proper operation of the equipment. Round-the-clock service insures that your GPL/NTS Instructional TV equipment will never miss a class!

**INVESTIGATE!** Don't settle for any closed circuit television until you've seen a free demonstration of GPL/NTS TV in your own school! Write or phone, collect, to Mr. H. Barnett, Director, Educational Television Products Division, National Theatre Supply Company, 92 Gold Street, New York 38, N. Y.; BEekman 3-4170.

*A single source for all your TV needs*

See us at N.S.B.A. and D.A.V.I. meetings

"just like being there"

Now you can record and playback every word of every important meeting and make presentations in full-dimensional stereophonic sound... with the American Concertone Audio-Visual Tape Recorder. Here is a recorder of the most advanced design—a recorder that will do everything any other recorder will do... plus... it can be pulse-synchronized with slide films, and operated by remote control. Five push-buttons provide complete, effortless control; tape can be stopped and edited exactly at any desired spot. Uses reels up to 10½" for three hour continuous recording. Can be operated in single track, too. Write to Dept. C1

**AMERICAN CONCERTONE**

655 West Washington Blvd., Los Angeles 15, Calif.

## On the SCREEN

### Cover

We have indulged in a slight departure from the norm this month, in not using a scene from some film for our cover subject. We did this for a very good reason. Since this, the April issue, is devoted predominantly to Audio emphasis, we thought a scene depicting the use of audio equipment in the school would be most apropos. This photo, provided by the Board of Education of the City of New York, is a "natural." It was taken at Jamaica Vocational High School in Queens and shows students using the tape recorder in speech improvement exercises. The "code," as the picture indicates, is Safety, Responsibility and Teamwork. Principal of Jamaica Vocational is Miss Beatrice Hodgins; Audio-Visual Coordinator is Miss Raimond Ballanca. The photo was taken by Mr. Ambrose J. Hickey, official Board of Education photographer.

### Introducing "audiofile"

Max U. Bilderssee, since 1947 record critic and Audio Editor of EDUCATIONAL SCREEN AND AUDIO-VISUAL GUIDE and nationally recognized authority on audio and audio-visual education, is named as Editor of "audiofile," the new concept in information concerning disc and tape recordings.

Devoted to improved instruction and more profitable leisure listening, "audiofile" will offer critical information concerning instructional recordings. Available on a subscription basis, "audiofile" will be published on 3x5 cards punched and ready to file alone in standard drawers or to integrate with existing card catalogues. Main entry cards will include a synopsis of

the recorded material, an independent critical appraisal, utilization information and a general rating of the value of the recording. All this information is designed to assist the teacher, the librarian and the audiovisual coordinator in finding the *right* audio material at the *right* time.

In addition to main entry cards there will be cross-indexing entries designed to make essential information more readily accessible.

### Special Audio Service

All those who are actively involved in the use of educational recordings in schools, whether tapes or discs, will be especially interested in the Recording Trade Directory, compiled by Max U. Bilderssee, that appears on pages 187 and 188.

Because of the pressure of time, this is not a complete listing of publishers, but represents some seventy or more that Mr. Bilderssee was able to gather together for us before we went to press. Additional listings will be similarly published in an early issue of Ed. Screen.

### Tapes In Teaching

How important the tape recorder has become to teaching; how it assists the teacher and benefits the student, is clearly illustrated in articles—"Using the Language Laboratory" on page 176, "Students Speak About Audio Learning," page 178, "Can Tapes Teach?" page 180 and "A High-School Lab Classroom" on page 183 of this issue. It makes us appreciate the changes in education that have come about since we were children, and anticipate the changes that are ahead of us. GM

# OVER THE YEARS

Flexalum Audio-Visual blinds will be your most economical, most practical classroom window covering!

FLEXALUM A-V BLINDS GIVE YOU EVERYTHING FROM FULL DAYLIGHT (WITHOUT GLARE) TO "PROJECTION" DARKNESS—yet they *cost less to install* than any combination of black-out and conventional window covering. What's more, they *cost less to maintain*, too. Flexalum's special spring-tempered aluminum, wipe clean plastic tape and nylon cord give years of trouble-free service. (That's certainly a comfort in these days of ever-increasing maintenance costs.) And, the greater number of slats per blind, special tape construction and light trap channels enable you to turn any classroom into a dark auditorium at the flick of a cord. Less light comes in . . . less money goes out—with Flexalum A-V blinds . . . sold with a written five year guarantee by Hunter Douglas Aluminum Division of Bridgeport Brass Co.

**DEVELOP.** Process exposed negative and positive film together.

**PEEL APART** and you have it . . . a transparency for projection. For translucent originals, the process is even simpler!

• There's no more need to be a photographic technician in order to prepare your own transparencies for overhead projection. With Ozalid's "do-it-yourself" Projecto-Printer Kit *anyone* can prepare on-the-spot transparencies from visual materials contained in textbooks, manuals, charts . . . in fact, any printed material. You can get dozens of new visual effects and colors, inexpensively, *in minutes*. No dark-room and no trays! And the Projecto-Printer is completely portable.

Ozalid has set up a nationwide network of visual

aids dealers to assure you of helpful advice and fresh materials. For a revealing, dramatic demonstration of these new techniques in visual aids, call *your local dealer*. He's listed below! Don't miss his "D" Day Demonstration!

# The reader's right

Send letters to **EdSCREEN & AVGUIDE**, 2000 Lincoln Park West, Chicago 14

## Progress Is Appreciated

Editor: The March copy of *Educational Screen and Audio-Visual Guide* arrived here in the office today and, as usual, somehow I find time to drop other matters to at least skim through the magazine immediately, if not read it completely. I have just read it from cover to cover and want to congratulate you on the issue. It's somehow quite earthy, practical, and functional, with plenty of ideas for teachers as well as audio-visual specialists.

Congratulations on your editorial: **POINTING SOUTH**. So many Easterners, Mid-Westerners, and even Westerners have the idea that the South is slow to catch on to adopting newer ideas. Of course, no area in the United States has a monopoly on being the most "aggressive." For some time now, it has been quite obvious that the South is really leading out in the use of television as an education device. They are to be congratulated for this and you are also to be congratulated in calling attention to their progress in your editorial.

*Francis H. Noel, Chief*

Bureau of Audio-Visual Education  
State of California  
Department of Education  
721 Capitol Avenue  
Sacramento 14, Calif.

## Needs Dog Films

Editor: We are doing a series of new T-V film programs on "dog heroes," "dogs of courage and achievement," etc., and it occurred to us that a little note in your Letters to the Editor Dept. might bring out some of the readers of your magazines to write us about their film footage on the subject.

We would, of course, give full credit and correct footage rates to all whose film might satisfy our needs.

Thank you and continued success always to you, your staff and readers with each succeeding issue of the magazine.

*Chet L. Swital*

Carthay Studio  
5907 W. Pico Blvd.  
Los Angeles 35, Calif.

## An Idea For Others

Editor: Your articles and various other features of the "Screen" are getting better all the time.

Your article by Dr. John Molstad "Let's See the School's Program" is right along the lines of what I have been thinking about and trying to implement for many years. Namely, better visualization to school patrons

and lay people of the place of visual education in the school program. Many school districts will do something on their own along this line, but many others never will. Therefore we have initiated a program of making filmstrips that we hope will interpret the school's activities to the community. The first of these is entitled "A Day In Kindergarten." We are giving this free to schools in California with the hope that it will be a good public relations medium.

*Herbert M. Elkins*

Herbert M. Elkins Co.  
Visual-Acoustic Teaching Tools  
10031 Commerce,  
Tujunga, Calif.

## We Do Our Best

Editor: I feel that of all the publications in the field of Audio-Visual Education, the magazine "Educational Screen & Audio-Visual Guide" is one of the finest. The articles are geared to not only the specialist in the field, but also the teacher who has very little experience.

*Robert H. Grigsby*

Director, Audio-Visual Education  
Beloit Public Schools  
1129 Central Avenue  
Beloit, Wisc.

Music is probably the area in which the tape recorder is most useful. Here are just a few typical examples.

- One school is building a library of songs used in Presidential campaigns. Some are taped from discs, radio and television. For the older songs, the music class produces a "live" version.
- Music supervisors often want to tape songs for the use of inexperienced teachers unsure of their own singing ability. This releases the newcomers from the burden of a personal demonstration.
- Taping can aid in demonstrating various types of voice timbre, how breathing can affect the tones, the difference between hitting the notes true and sliding to them — all these are more effective when the class is not distracted by the facial expressions necessary to produce them.
- One member of a duet records his part solo. Then the other plays his part to a playback of the recording. This trains each member to play his part without relying on unconscious cues given by the other. A musician can also accompany "himself" using a tape recorder this way.
- Many times discs are too fast for proper instruction in folk, square, or tap dancing. Piano music can be recorded on tape to go as slowly as you wish.

The sound quality of a tape recording can be no better than the quality of the tape on which it is recorded. Educators' critical requirements for fidelity of reproduction and consistent quality are easily met by any of the eight types of Audiotape. This complete line of professional quality recording tape offers the right recording time and the right tape cost for any application. But, regardless of type, there's only one Audiotape quality — the finest that can be produced. For information on what type of tape is best for your recording job, write Audio Devices, Box EV.

**audiotape** *it speaks for itself*

AUDIO DEVICES, INC., 444 Madison Ave., New York 22, N.Y.

## What Coronet "creative quality" means to educational films

### BASIC RESEARCH

The foundation of Coronet film production is an exhaustive research program, utilizing a staff of trained research assistants. Preliminary research centers on a thorough analysis of curricula to establish the areas in which teaching films can be helpful. Suggestions from educators, trends in education, and new ideas in film utilization are the sources which guide film planning. As new production schedules are organized, the research division launches a quest for information on specific subjects—consulting specialists, textbooks in use, writers of textbooks for future use, professional libraries, and other available sources. Then—after months of consultation, research, revisions, and further research—educational outlines and a script are prepared.

This exhaustive study of the basic units, trends and objectives in all subject areas and at various grade levels has resulted in:

- films which correlate with current teaching objectives*
- films which are effective in specific areas and at specific grade levels*
- films which offer balanced assistance throughout the curriculum*
- films which are accurate in presenting their contributions*

#### New Coronet films for specific subject areas and grade levels:

**GOLD RUSH DAYS** (1¼ reels). Intermediate, U. S. History. This film shows life in a gold-mining settlement, the effect of the gold rush on population growth and prosperity in the West, and the emerging statehood of California.

**CAREERS IN AGRICULTURE** (1¼ reels). Junior and Senior High School Vocational Guidance. A high school teacher explains many career opportunities in agriculture—in crop and livestock farming; in agricultural research, industry, conservation, and services; and in agricultural communication and education.

#### EDUCATION IN AMERICA SERIES (three films, each 1½ reels). College, Teacher-Education.

- Education in America: The Seventeenth and Eighteenth Centuries**
- Education in America: The Nineteenth Century**
- Education in America: Twentieth Century Developments**

An historical survey of American education from the early New England schools through the establishment of the public school to education during the Depression, the World Wars, and the Korean War. The GI Bill and recent Supreme Court decisions are discussed.

*Each film is available in either color or black-and-white.*

Preview prints of the Coronet films described above are available for purchase consideration. Simply indicate your preview preference on the coupon.

## International Tape Exchange

The International Tape Exchange Program was launched by Educational Screen in October 1954, with the help of Mrs. Ruth Y. Terry of Muskegon, Michigan. Its purpose has been and is, to promote and aid the exchange of tape recordings between school and church classes and groups in this and other countries.

Since its launching, the International Tape Exchange Program has grown steadily and present records show it has more than doubled its exchange activities since this time last year.

There are currently 162 exchanges operating in 30 countries including Hawaii. Information concerning the schools or groups listed may be had by writing direct to Mrs. Terry at 834 Ruddiman St., No. Muskegon, Michigan.

**A committee of Exchange Teachers of English as a foreign language, students of the University of Michigan English Language Institute. They are l. to r.: Tokiko Shinoda, Japan (who made the photo), Abaldvoodoo Tohid, Iran, Mrs. Yae Ogasawara, Japan, Waugelita Santos Loureiro, Brazil, Ruth Y. Terry, Senior H. S., Muskegon, Mich., Parivash Manoochechri, Iran.**

Mrs. Terry reports that her own English classes have been enjoying exchanges with classes in Australia, Japan, New Zealand, India, Iran, Malaya, Brazil, Norway, Germany, France and other countries.

Mrs. Terry is particularly anxious to thank the National Union of Teachers in London for informing the teachers of Great Britain about the International Tape Exchange Program and to thank the teachers for their willingness to participate. Notices have appeared in "The Schoolmaster and the Woman Teacher's Chronicle" as well as in the "National Teachers Union" publication.

## Possible Federal Support of A-V

As an opening gun in NAVA's campaign to get Federal appropriations for school purchases of instructional materials and equipment, they have tentatively arranged to give an AV demonstration to the Committee on Education and Labor of the U. S. House of Representatives. An attempt is being made to arrange a similar demonstration for the corresponding Senate committee.

Of course, a great many bills are introduced in Congress each year, and relatively few of them ever become law. However, the circumstances at this time seem to assure the best chance ever of securing substantial Federal support.

NAVA will welcome comments and suggestions concerning features which should be included in any such laws.

If you have information as to contacts with any Senators, Congressmen, or other high political figures, or if you are in a position to volunteer your help, either in Washington or elsewhere, please get in touch with Don White at NAVA headquarters, Fairfax, Va.

## 10th A-V Selling Institute

The Tenth Anniversary National Institute for Audio-Visual Selling will meet on the Indiana University campus in Bloomington, Indiana, July 20-21, just prior to the National Audio-Visual Convention here.

Among special features of the four standard Institute courses this year will be the use of role-playing; a new approach to sales demonstrations of equipment; and further development of the use of expert consultants in specialized area of the Salesmanship, Sales and Business Management, and Applied Selling courses. The fourth course, Preparation and Use of Audio-Visual Materials, features practical, low-cost methods of local preparation and will be summarized with a review of applications to major markets.

Frank E. Creasy of W. A. Yoder Co., Richmond, Va., is chairman of the Institute Board of Governors, with Al Hunecke, of the DuKane Corp., St. Charles, Ill., as vice-chairman. Dr. K. C. Rugg, associate director of the Audio-Visual Center at Indiana University, is assisting in plans and administration.

## Denver NAST Convention

The 6th Convention of the National Science Teachers Association held at Denver March 28-29 was marked by extensive attention to and use of audio-visual devices and materials. No less than 32 sound films and filmstrips, from 12 different sources, were shown in six film demonstration sessions. The convention's discussion topics included: "A Kinetoscope of a Biology Lesson in Direct Teaching by Television"; "Evaluation of Business-Sponsored Teaching Aids"; "Exposition of Science Teaching Aids"; "Teacher Preparation Before the Field Trip"; "Aids in Teaching Astronomy"; "A Student Project for Making Professional-Looking Anatomical Models with Inexpensive Materials"; "A Filmstrip Prepared by a Teacher for the Specific Classroom Problem of Introducing the Dissection of the Frog"; "A Visual Approach to Problem Solving"; "Enriching the Physics Course With Color Slides." Clinic topics included: "Improving the Use of Business-Industry and Audio-Visual Aids in Science"; "The Field Trip in Secondary School Science"; and "Science Fairs in the Junior and Senior High School."

## Grants to the Qualified

The Fund for Adult Education, 200 Bloomingdale Road, White Plains, N. Y., is offering approximately 20 grants for study and training to individuals associated with mass communications. Writers, editors, reporters, producers and program directors—associated with newspapers, magazines, TV or radio broadcasting, or educational film production—and faculty members in colleges giving training in mass communication, are eligible to apply. Criteria that will influence the selection of candidates for grants include: 1) Commitment to the ideals of a free society; intelligence, imagination, sensitivity, articulateness, integrity and resourcefulness; evidence of creative accomplishments of outstanding promise; understanding of gaps in personal equipment needed for progress of changed endeavors; soundness of plan for study and/or training; prospects for putting to good use, in the context of the media of mass communications, the expected improvement in knowledge and skills.

Which one of these meters is used for audio-visual purposes?

**ANSWER:** The one on the left is the conventional photographic meter which gives light intensity. The one on the right gives foot candles, which is the measure of light used for audio-visual purposes.

*Even though both meters show that rooms equipped with LEVOLOR A-V BLINDS give a zero reading, our Audio-Visual Department believes that the maximum darkness of the room is not the major consideration! The lighting conditions of an audio-visual room should be at the complete*

discretion of the instructor. Various conditions and various subjects require elasticity in the control of light. This control should be simple and immediate.

The Levolor A-V Blind enables the instructor to change the room from maximum darkness to a soft diffused light—in a matter of seconds—all by an adjustment of the slats.

Full details and specifications will be sent on request. Write to LEVOLOR LORENTZEN, INC., Audio-Visual Dept. 720 Monroe St., Hoboken, N. J.

Be sure to specify

## San Jose Summer Session

Dr. Louis Shores, Dean of the School of Library Training and Service at Florida State University and one of the pioneers in the promotion of instructional materials centers, will direct one of several seminars being scheduled by the Department of Librarianship at San Jose, California, State College during the 1958 summer session.

Dr. Shores will come to the San Jose campus to discuss the newest developments in the field of instructional materials. This seminar will correlate with the Masters degree program in curriculum materials which is offered by San Jose State.

At San Jose the Departments of Librarianship and Audio-Visual pro-

vide a complete training program for all persons interested in becoming an instructional materials specialist.

Persons interested in information about the regular or the June 23 to August 1 summer program may address requests to Miss Dora Smith of the Department of Librarianship or Dr. Richard Lewis of the Department of Audio-Visual.

## DAVI Continues Field Consultancy Services

The NEA Department of Audio-Visual Instruction will continue its field service consultancy program through 1958 with the aid of a \$1,500

grant from Teaching Film Custodians, a group sponsored by the member companies of the Motion Picture Association of America, Inc.

The program, in operation since last year with funds from the same organizations, is designed to improve public-school and college instruction through the use of audio-visual materials and techniques. The service provides experienced consultants to cooperate with local groups and dispatches survey teams to work with school systems and colleges.

"The surveys," said Anna L. Hyer, DAVI director, "benefit not only the schools in which they are conducted. School systems and colleges throughout the entire area receive guidance from their reports." To date, Dr. Hyer said, consultancy service has been provided to Oklahoma City Public Schools, the University of Virginia, Harding College, Virginia State College, Des Moines Public Schools, Arizona State College, and Southeastern Missouri State College.

Superintendents of schools, college presidents, or other responsible administrators may submit requests for consultant service to DAVI, 1201 16th Street, N. W., Washington 6, D. C.

## Educational T-V in Puerto Rico

The Puerto Rico Department of Education opened its first educational television station WIPR-TV, in Hato Rey on January 6th, when it began transmitting on channel 6. The station is aiming at an ambitious schedule of programming that will combine learning, entertainment and culture.

Direct instruction will be broadcast with outlines, texts, examinations and credits in mathematics and sciences on the high school level, including algebra and physics. Each course is programmed for a half hour two nights a week. In addition to high school students who meet requirements, the courses will be open to adults enrolled in night school and adults who have completed the ninth grade or equivalent.

The indirect approach will be used extensively in teaching through dramatized programs, or documentary films; films for children to teach good habits; social activities; family relations; care of pets; geography; music appreciation, reading and English.

WIPR-TV is the first ETV station to be opened in Latin America. It began operations with approximately 60 per cent filmed programs and 40 per cent live, but is aiming toward increasing the number of live shows.

# SCHOOL MASTER 500

the most versatile  
dual-purpose projector  
available for your  
audio-visual program

FOR  
SINGLE-FRAME FILMSTRIPS  
AND 2x2 SLIDES

*Have your Graflex A-V dealer demonstrate  
this versatile projector for you in your own school.*

The School Master 500 is an ideal supplement to classroom instruction. It's a prime requisite for any educational institution desiring the best in audio-visual equipment.

Versatility is a big reason for the preference accorded this exceptional instrument. It projects 35mm filmstrips by remote control or manual operation. Also, 2x2 slides may be projected manually. The change from filmstrip to slide operation can be made in seconds. If desired, an accessory semi-automatic or Airequipt automatic slide changer may be permanently installed.

School Master's 500-watt illumination, precision 5-inch f/3.5 lens and precision ground optical system project sharp, brilliant images even in partially lighted rooms. The School Master 500 has many advanced features, yet its price is extremely low—only \$89.50. Remote control model—\$124.50.

*All prices include federal tax where applicable and  
are subject to change without notice.*

## Summer Sessions

Eastern Michigan College at Ypsilanti offers the following summer sessions in Audio-Visual Education courses:

June 23 to August 1 —

Audio-Visual Methods in Teaching (2 sections) (Undergraduate) (2 hrs. cr.) Oltmanns.

Visual Sensory Aids in Education — Peterson

Problems in Audio-Visual Programs — Peterson

August 4 to Aug. 22 (workshop)

Audio-Visual Methods in Teaching (3 hrs. cr.) Lincoln School, Pontiac, Michigan — Oltmanns

Audio-Visual Methods in Teaching (3 hrs. cr.) Jefferson Consolidated, Monroe, Mich. — Peterson

## People in the News

Ann Arbor, Mich.: Samuel B. Sullivan, long-time Illinois School administrator and curriculum specialist, has joined the Educational Television and Radio Center here as a consultant on school uses of TV, ETRC President H. K. Newburn announced recently.

In his new position, the educator consults with schools on the most effective ways of using television in their instructional programs. He works closely with schools in cities where there are educational TV stations, as well as those with closed circuit television installations. He is associated with Dr. R. W. Crary, director of education for the Center.

Houston, Texas—On the educational television front, DAVI announces the appointment of Harold E. Wigren as ETV consultant for the NEA. Dr. Wigren is on a six-month leave from his position as audio-visual director for the Houston Independent School District. He comes to the national office with wide experience in educational TV and in the use of instructional materials. Dr. Wigren's work as coordinator of the DAVI-sponsored ETV workshop and seminar last fall brought him wide acclaim in the field.

Johnson City, N. Y.: Eric S. Burtis has been appointed Western Regional Director, Visual Aids, Ozalid Division of General Aniline and Film Corporation, according to an announcement by James A. Travis, Ozalid general sales manager. Burtis has been chief, U. S. Army Signal Corps Film and Equipment System, Washington, in charge of 258 Army film exchanges. Previously, he had been Director, 6th Army Film Library Service with headquarters in The Presidio, San Francisco. He is a member of DAVI, SMPTE, and the Armed Forces Com-

munications and Electronics Association.

Minneapolis, Minn.: Roger B. Sifford, Fort Wayne, Indiana, has been named Executive Director of the Board of Audio-Visual Service of the Augustana Lutheran Church.

Mr. Sifford, audio-visual consultant for Audio-Visual Specialists, Fort Wayne, for the past three years, will succeed his father, Bruce Sifford, who has been executive director of Augustana's AVS for the past 11 years.

The new director is expected to devote a major portion of his time to a program encouraging and assisting Augustana congregations in the most effective use of visual aids in the parish program.

Mr. Sifford will assume his new duties at the AVS offices at 2445 Park Avenue, Minneapolis, about April 1, when his predecessor becomes director of Augustana's newly organized Bureau of Press, Radio and Television.

Robert B. Sifford

## 1958 Calendar of Events

- April 15-17—Second Medical Motion Picture Workshop, The Calvin Company, Kansas City, Mo.
- April 21-25—Dept. of Audio-Visual Instruction, NEA, Minneapolis, Minn.
- April 21-25—Society of Motion Picture and Television Engineers, 83rd Convention, Ambassador Hotel, Los Angeles, Calif.
- May 5-9—American Society of Training Directors, Sheraton-Park Hotel, Washington, D. C.
- July 20-24—National Institute for Audio-Visual Selling, Indiana University, Bloomington, Ind.
- July 26-29—National Audio-Visual Convention, Morrison Hotel, Chicago, Ill.
- Aug. 17-23—1958 International Religious A-V Workshop, Penn State University, University Park, Pa.

# EMPHASIS ON AUDIO

No matter how you are accustomed to pronounce audiovisual, the accent in this issue of "educational screen and AUDIO -visual guide" is definitely on the AUDIO. But this shift of accent is only slight. In every issue we are concerned with the audio part of audiovisual materials and equipment and their use. Not only is there Pat Bilderssee's regular SOUND ADVICE columns, but audio as an integral part of audiovisual is in practically every article.

But when the emphasis is upon audio, separated from audiovisual, the tape recorder gets special attention. When the emphasis is upon the use of the tape recorded, the language laboratory just naturally becomes involved. The development of the language laboratory for the teaching of foreign languages is one of the most significant audio developments of the past decade. It has come to the colleges first, but increasingly, adaptations of language laboratory installations and methods are coming into the high schools.

If the audiovisual director is at all inclined to be gadget-minded — if he's inclined to be more interested in the electronics and mechanics of audiovisual equipment than in what the equipment does — he'll find a dangerous paradise in the idea of a language laboratory. We've seen the results of this in pictures of installations costing from twenty to thirty thousand dollars. Such laboratories are so complex and the operating console so elaborate that no teacher without an engineering degree and a special license could possibly run the thing. We've also seen simple inexpensive installations being used for extremely effective teaching.

Some wise guiding words about language laboratories were recently spoken by Paul E. King\* to the Language Department faculty at Columbia University:

\*Dr. Paul E. King is associated with Magnetic Recording Industries of New York City.

Of the several hundred Language Laboratories in operation today, no two of them are entirely alike. And within any given laboratory, no two instructors are using its facilities in exactly the same way.

*"The Language Laboratory is a teaching tool. Like any tool its use and utility depend upon circumstances and the person using it, — upon the course of study and the instructor. By itself, electronic equipment can never do the job; like an automobile, it must be guided and steered properly to reach its goal."*

When the audiovisual director is called upon to assist the language department in developing a language laboratory, his highest skills and abilities are being called for. Here he can go wild in the development of an electronic wonderland, or he can give real help in building a simple and functionally effective tool.

The starting point must be consideration of the job to be done — the purpose of the laboratory, and the purpose of the teaching. The teacher and the way he expects to teach are the factors that should determine how the components are put together for a language laboratory. And before the audiovisual expert can help in developing specifications, he must first help the language instructors determine quite specifically how the equipment will be used. More than for any other audiovisual tools and equipment, the language laboratory must be custom built to specific teaching needs. The audiovisual director has a most important role to play in first helping to determine those needs, then filling them.

So, in this issue, with its emphasis upon the AUDIO, there's more attention given to teaching than to teaching tools per se. After all, it's how those tools are used and what happens to the learner that really matters.

*Paul C. Reed*

# LISTENING!!!

Richard S. Hampleman

*Richard S. Hampleman is Assistant Professor of Education, Chico State College, Chico, California. This provocative article on "Listening" is based upon his Indiana University doctoral thesis, and is a condensation of a more complete report of his study published in ELEMENTARY ENGLISH, 1957.*

**H**ISTORICALLY, listening was of greater importance in the early days of our country. Much information gained then was obtained only by word of mouth. As the sale and distribution of printed materials became more widespread, attention was focused upon the ability to read. This emphasis upon reading and neglect of listening has characterized most of our teaching up to the present.

A renewed interest in and attention to listening ability began with the advent of radio and was strengthened by the coming of sound motion pictures and television. Only in recent years have we come to realize that we need to train the child to become a more proficient listener. The problem of understanding and interpreting what he hears becomes more acute as he is increasingly bombarded by conflicting ideas through mass media.

Listening, along with reading, is classified as a receptive language arts skill. Perhaps it is because they are both on the receiving end of the communications process that for many years they have been considered to be passive in nature. Leaders in the field of reading discovered years ago that a child learned to read to the extent that he was able to actually bring a combination of experience and intelligent thought to the task at hand.

A similar awakening has taken place only recently in the field of listening. Skill in listening and reading both require that active thinking be applied to symbols heard or read. *It is at this point, where intelligence must be applied to symbols, that listening is distinguished from mere hearing, and reading from mere seeing.* It is here that we discover the focal point to attack in helping children to listen better. Children need to be assisted

to use the proper techniques for applying intelligence to that which is heard.

Little attention has been devoted to improving the listening ability of children. This has been true in spite of the greater amount of time people devote to listening and in spite of the fact that listening is of greater importance as a mode of learning throughout the elementary school than is reading. We have assumed that children either know how to listen already or that they will acquire this ability naturally. However, several studies have indicated that listening ability is not very efficient. If listening ability can be improved, and some studies have indicated that it can be, it would appear that listening ability is a mode of learning that need not lose its superiority over reading ability at the junior high level as it appears to do now.

Listening has been neglected, not only as an area of instruction in the schools, but as an object of research study. Results of these few studies of listening have often been conflicting or inconclusive. Most of them have been performed with college students and adults as subjects. There is great need for more studies of listening, particularly with elementary school children as subjects.

The following conclusions from the listening research studies reviewed may be tentatively stated:

1. Listening comprehension seems to be definitely superior to reading comprehension in Grades 3, 4, and 5.
2. Reading comprehension seems to be only slightly superior to listening comprehension beginning approximately in Grade 7 and continuing up to the adult level.
3. Most of the studies which show reading comprehension to be superior to listening comprehension use recordings or radio presentations for their listening groups. In face-to-face listening situations, therefore, the two modes may be equivalent in effectiveness. This conclusion may not be safely drawn, however,

from present research.

4. Listening comprehension is superior to reading comprehension with easy material. Reading is superior to listening with difficult material.
5. Listening comprehension is superior to reading comprehension with subjects of low mental ability. Reading is superior to listening with subjects of high mental ability. The two modes are about equally effective for those with average mental ability.
6. Listening comprehension seems to be at least equal to or superior to reading comprehension in tests of delayed recall.
7. Conclusions from these studies must be accepted with some reservations. Procedures and materials used varied widely.
8. There were no studies found which compared listening comprehension on passages of varying length.

The purpose of the investigation made by this writer was to compare listening comprehension ability with reading comprehension ability of fourth and sixth grade children as this relationship was affected by differences in mental age, grade level, difficulty of material, length of passage, and sex. The study was carried out in four elementary schools of Macomb, Illinois, with a total of approximately five hundred pupils.

Here is a summary of the findings of this study:

1. Sixth grade pupils are significantly superior to fourth grade pupils in both listening and reading comprehension.
2. Listening comprehension is significantly superior for fourth grade pupils and sixth grade pupils, boys and girls.
3. Easy material is more readily comprehended than hard material by fourth grade and sixth grade pupils, boys and girls.
4. For fourth and sixth grade pupils, listening comprehension shows a greater superiority over reading comprehension with easy

*(Continued on page 179)*

# USING THE LANGUAGE

Main recording studio where tape masters and tape copies are made. Fernand Marty, director of Middlebury College language laboratory, prepares master tape.

**M**OST language teachers regard the language laboratory as a place where (a) dictations can be given, (b) remedial pronunciation work can be done, (c) cultural audio-visual materials can be used.

For the dictations, the students listen together to a tape where pauses have been provided, and they submit their papers to the instructor.

The remedial pronunciation work is usually done using one of these installations:

(1) the student has two machines; he listens to the tape to be imitated on one machine and he records his imitation on the other machine; then, he compares his recording with the original;

(2) the student uses a dual-channel machine; the text to be imitated is on one half of the tape with pauses; the student records his imitation on the other half of the tape during the pauses; then, he compares;

(3) the text to be imitated comes to the student from a console and is recorded on the student's tape as he listens to it; during the pauses, the student records his imitation, thus preparing a tape which contains a copy of what he had to say and what he said; then, he compares.

Cultural audio-visual materials are plentiful (films, slides, filmstrips, records about the literature, the arts, the history, the geography, the customs of foreign countries). These aids can be used for group study—when a film or slides are shown to a whole class—or for individual study—when the student comes to the language laboratory for the individual study of a recorded play or when he comes to an audio-visual room to look at slides and listen to the accompanying tape commentary. In addition, a Realia room can be installed with newspapers, magazines, flags, coins, maps, pictures, stamps, costumes, etc.

These uses of the language laboratory are profitable, but they do not exploit its full capabilities. The main purpose of a language laboratory should be to teach the audio language skills: audio comprehension and oral self-expression. However, this use of the language laboratory requires a complete modification of classroom techniques and a new presentation of the language. This is due to the fact that the grammar of the spoken language is quite different from the rules of the written language. Let us suppose, for example, that you are teaching English to a group of foreign

students and you tell them: "In English, the past participle of most regular verbs is formed by adding the suffix -ed to the infinitive (to dress/dressed); sometimes, the consonant is doubled (to stop/stopped)." This rule—although quite true on paper—does not apply to spoken English where the past participle is formed by the addition of a "t" sound (to stop/stopped, to dance/danced), the addition of a "d" sound (to burn/burned, to cry/cried, to arrive/arrived), or the addition of a syllable (to repeat/repeated, to visit/visited). The classwork and the laboratory drills should, therefore, be based not on what happens on the paper, but on what happens when the language is spoken.

This audio-graphic duality affects nearly all languages, and it is particularly marked in language like French where practically all the rules of spoken grammar are different from the spelling rules. See *Methods and Equipment for the Language Laboratory*, pages 28-42; *Audio-Visual Publications, 1956, Middlebury, Vermont.*

Thus, your first step in using the language laboratory for the teaching of the audio language skills should be to modify your class presentation and to use a text which clearly separates the spoken and the written aspects of the language.

The second step takes place in the laboratory where the student reviews and practices the work done in class. For this laboratory work, the group study method is not efficient and the "Library" system has to be used (that is, the student goes to the laboratory when he wants to and he studies as long as he needs). He goes to a booth or room where he finds a practice tape. This tape contains problem sequences immediately followed by the answers and the student proceeds as follows:

(1) the tape says: "Drill number one; you are going to hear 30 sentences in the masculine; shift them to the feminine;

(2) the student listens to the first problem sentence: "Tous mes amis sont partis"; he stops the tape (the machine should have a pause button for instantaneous stop and start); he thinks about the answer, says it aloud, and then starts the tape again to hear the answer "Toutes mes amies sont parties" and to ascertain whether his

# LABORATORY

Fernand L. Marty  
Middlebury College  
Middlebury, Vt.

answer was right or wrong. *This is a good example of the audio-graphic duality in French; on the paper the shift from the masculine to the feminine produces three changes, but in spoken French there is only one change (the addition of a "t" sound).* He uses the same technique for sentence 2, sentence 3, and so on to the end of the assignment. He takes notes about the sentences he does not answer correctly so that he will be able to concentrate on them in a further laboratory session.

The translation technique may also be used; with that technique, the student has a list of sentences to translate from English into French. He proceeds as follows:

(1) he looks at the English sentence, and translates it aloud into French.

(2) he starts the tape to check whether his translation was right or wrong.

The great advantages of these techniques (the sentence modification technique and the translation technique) are that the student's errors are cor-

rected immediately and that longer assignments can be given. The usual homework assignments where the student has to write translations with the help of grammar books and dictionaries are time-consuming and the student has to wait until the next class to find out whether the sentences he is laboriously putting together are right or wrong—and by that time, the wrong expressions will be so firmly entrenched in his mind that the class corrections will have little hope of removing them.

During the laboratory practice, the student does *not* record his answers because recording would require too much time and because we believe that just a few minutes of recording per week are sufficient to help the student with his pronunciation. *We believe that far too much attention is paid to pronunciation; the main point in the audio language skills is to train the student so that he will be able to understand the spoken language and will be able to make himself understood without difficulty (that is, use correct*

*forms, vocabulary, syntax, and an acceptable pronunciation).* In fact, as regards pronunciation, there are three types of students: there are those who—with or without recording—will pick up a native pronunciation from the very first day in class; there are those whose pronunciation will remain atrocious no matter how much they practice; and there are those who, with the teacher's help in class plus a few minutes of weekly recording for self-evaluation, will acquire an acceptable pronunciation. With these latter students, the difference in the results obtained in 20 minutes or 20 hours of weekly recording is negligible.

This recording takes place during the 15-minute weekly examination. The class goes to the laboratory (one student per booth). Each student has his own 3" tape. The examination is played from the main recording studio. Each question is given only once and the students have to record their answer during the ensuing pause. The students run their tapes *only while speaking* (thus there are no intervals in between the answers, and the tapes can be graded rapidly).

At the end of the examination, the students are told to rewind their tapes to the beginning of the first answer. Then, they hear the correction of the examination and they compare, sentence by sentence, what they had to say and what they said. Therefore, at the end of the correction, the students know how many errors they have made and what grade to expect.

Occasionally, at the end of the correction, the students are asked to take the same examination again. Such "surprise" re-examinations ensure that the students pay attention to the correction.

These are only a few of the techniques that can render the team language teacher—language laboratory far more efficient and less costly than it has been. There are scores of other possibilities, so many in fact that every summer many language teachers find it worthwhile to attend language laboratory workshops, such as the one conducted during the Middlebury summer session, where they find that a simple laboratory installation can help them prepare the language specialists who are so vitally needed today.

Student listens to a recording of a play, during individual audio comprehension exercise.

# Students Speak About Audio Learning

by Janet S. Reed

**W**HAT makes a teaching method successful? Certainly of prime importance in evaluating any teaching program is the reaction of the student. The use of the oral method and the Audio Laboratory in the study of languages at Middlebury meets with unanimous approval of the participating students.

The tape recorder in the laboratory is used in two different ways. In one, it is used simply as a supplement to the classroom instruction. The professor presents the grammar, vocabulary and reading material to the students during the regular class period, usually with the aid of a text or the blackboard. As a part of the outside assignment, the student goes to the laboratory and receives help, mainly in pronunciation and phonetics. This method is used in the teaching of Russian, Spanish, German and Italian at Middlebury. The benefit obtained from this method is unquestionable. However, this method is useful only in a conventional language course, as

contrasted to completely oral instruction.

The second method is the "three-step" method as advocated by Mr. Fernand Marty, Assistant Professor of French and Director of the Language Laboratory at Middlebury. A completely oral-aural course is the only type in which this method is utilized. The material is first presented to the class without the aid of textbooks or other visual means. The second step is the review laboratory, to which the student goes and listens to the tapes for further clarifications and exemplification, and also drills on various aspects of the language. The third step is the oral examination in which the teacher is in one room and the students are in separate listening booths recording their answers to the questions.

At the present time, the three-step method is used only in the teaching of French at Middlebury. Three oral courses are offered in the French department, in addition to the conven-

tional type courses. For the student beginning French at the college level, French 10 or Elementary French is taught. In this course, the first semester is spent completely in oral work, with reading and writing being introduced in the second semester. The outside work is done almost entirely in the laboratory, both listening and recording. For the student entering with several years of high school French or for those completing French 10, there is French 13, Intermediate French-Oral. For the advanced student, French 41, a semester course in phonetics and diction is offered.

Since French is the only language taught by the three-step method, my interviews were with students of French and concerned their reaction to this method only. The following questions were asked during the interviews: 1) Do you like this method and why? 2) Why are you taking oral French as opposed to the conventional reading course? 3) How does the three-step oral method compare with other methods used in your previous experiences. 4) Are there any disadvantages to this method or anything you particularly dislike about this method? 5) How much time do you spend in the laboratory each week?

First, I talked with two freshmen who were beginning the study of French at Middlebury. They were both wholeheartedly enthusiastic in their approval of the course and the methods used. The reasons for their enthusiasm varied, but they all pointed to one thing—the desire to speak the language and to be able to converse with native French people. One thought that although she did not particularly desire a reading knowledge of the language, she could pick this up on her own through the oral work. There is so much drill in the course that the French expressions become automatic and you even begin to think in French—a step toward true comprehension. Both agreed that the course was stimulating and challenging. "You must pay attention in order not to miss a single thing," as one expressed it. The girls were loath to speak of any dislikes about the course, because of their high enthusiasm for the instructor and the method in general. One felt a disadvantage was not learning to spell.

Student taking examination in language laboratory where a booth installation is used. Here individual head phones must be used.

## LISTENING

(Continued from page 175)

**Student taking examination in language laboratory where a room installation is used. Here the loud-speaker can be used.**

However, this may be corrected by study on one's own and is not an insurmountable barrier by any means. Procrastination is one of the difficulties that must be overcome by the student in taking an oral course. No one checks to see that you go to the Audio Laboratory. This is a problem that the student used to day-to-day definite assignments must face. It was clear that the minor disadvantages were far outweighed by the advantages. The time spent in the laboratory by a beginning student ranged from three hours to seven to nine hours a week.

Next, I spoke with two girls who are enrolled in the Intermediate course and who had both taken French in high school. Again, almost unqualified enthusiasm was shown for the oral method. One of the girls expressed a dislike for learning rules upon rules without application in a conventional French course. Because French is a living language, one that changes from day to day, she feels that the only way to learn it is by constant speaking. In doing this, you get a "feeling" for the language and you can "sense" when a sentence or expression sounds right. In other words, you are learning the language as little French children do, and as young American children learn English — from hearing it and sensing its correctness. Mr. Marty's use of contemporary material was heartily praised. He teaches the most current usage and in his taped examples, uses the most frequently used expressions. In this French course, part of the listening material is taken from a Montreal radio station's newscasts which were broadcast during the previous few days. In learning the language, the students are also learning about the

world and about the French people from the French people themselves. According to both of the girls, the amount of time spent on the course, four hours a week of class and upwards from ten hours a week in the laboratory, are minimized by the interest and value of the course.

Finally, I interviewed two students who are in their third year of French at Middlebury. They emphasized the value of the oral courses and underscored the enthusiasm shown by the other students interviewed. One student of Phonetics told me something about the course. In it they undertake the study of the history of the French language and the various dialects of France. Mr. Marty utilizes tapes recorded in France of actual French people speaking in different dialects. I was amused that in our discussion she could not think of the English word "dialect" and used instead the French word "patois!" Both of these students thought that since the main purpose in studying a foreign language is usually to be able to converse in that language that the oral method using tape recordings is by far the best approach.

All of the students expressed their enthusiastic regard for the instructor and the instruction. Through the use of modern methods and materials the courses were made interesting and challenging. They were made alive and real through the use of contemporary material and through teaching the way the French people are speaking their language TODAY.

*Janet S. Reed is an eighteen-year old freshman at Middlebury College, 223 Battell South, Middlebury, Vermont.*

material than with hard material. Had the material employed in this study been even more difficult, it is possible that reading comprehension may have been shown to be superior for such material.

- Boys are superior to girls in comprehending the hard material in this study. However, although this result may reflect a true difference between boys and girls on hard material, it may indicate only that the hard material contained more information of interest to boys than to girls. No definite conclusion on this point may be drawn from the results of this study.
- Varying the length of passages of story type material produces no apparent differences in the ability to comprehend such passages.
- The relationship between listening and reading comprehension does not appear to be altered by length of passage.
- An increase in mental age and, to a lesser extent, chronological age decreases the difference between listening and reading comprehension.

The following recommendations were suggested based upon the finding of this study comparing listening and reading comprehension abilities of fourth and sixth grade pupils:

- More attention should be given to oral presentation of subject matter materials with elementary school children, especially those with lower mental ages.
- Comprehension of meaningful prose, as affected by length of passage, needs further study, particularly with informational material. Such study might show that longer passages are more difficult to comprehend than short ones.
- Further research is needed to discover whether boys actually surpass girls in the comprehension of difficult material, or whether the boys' superiority in this study may have been caused, instead, by the fact that the material was better suited to the interest of boys.
- The factor of interest in materials should be the object of future research. Several studies, including this one, have implied that interest may be a more important factor in comprehension than the variables studied.

# CAN TAPES TEACH?

One or two loud speakers per room insure that there is no problem in hearing the Spanish phrases as they are spelled out on tape. Later, students check their spelling by referring to skeleton manuals. Miss Wilma Kramer, teacher, knows no Spanish.

FOR the last year and again this year Westside High School of Omaha, Nebraska, has been experimenting with various ways of making tape and tape recorders take over a part of the teaching load. These experiments are being conducted under the auspices of the Commission on the Experimental Study of Staff Utilization of the National Association of Secondary-School Principals of the NEA.

In the first year's study the experiments were confined to the teaching of seventh grade spelling and seventh grade Conversational Spanish. In the spelling four tape-taught classes were compared with one teacher-taught class. All used the same word list prepared locally after much research on seventh grade spelling. In the Spanish four groups were taught by their own non-Spanish speaking classroom teacher using the tapes and a teacher's manual. The control group was taught by a high school Spanish teacher using the tape and adding to this tape at times.

In the spelling two questions were asked:

1. Will the scores in word-list tests and in use-in-sentence tests (long after the material has been studied in class), and achievement tests at the end of the year, prove that the tape-taught classes have learned as much as the teacher-taught group?

The statistical analysis conducted by the Statistical Department of Nebraska University concluded that not only had the tape-taught classes fared as well as the teacher-taught class but in many

cases were significantly superior to the teacher-taught class. In only one comparison out of sixteen was there a significant difference in favor of the teacher-taught class. The achievement tests at the end of the year compared with pretests showed no significant differences between tape-taught and teacher-taught groups.\*

2. Will the voice of the class's own teacher be more effective on the tape than the voice of an outsider?

After many weeks, when no apparent difference between classes using tapes prepared by their own teacher and a class using tape prepared by an outside teacher, showed up — this phase of the experiment was dropped.

In the Conversational Spanish course two questions were asked:

1. Can a teacher who has had no previous experience with the language teach it by using tapes twenty minutes a day and following a teacher's manual which merely gives the material on tape in a skeleton form?

Not only did none of the teachers using the first year's tapes last year and this year (10 teachers) experience no difficulty whatsoever, but those who used the tapes last year were anxious to use them again this year as a part of regular seventh grade instruction. A change of teachers was made in one room midyear. A new teacher went into the situation and picked up the reins

effectively after a few days of demonstration and a quick review on her own of the tapes the class had used.

2. Will a teacher who has had language training use the tapes more effectively than a teacher with no experience?

By weighing the evidence in written semester tests and tape-recorded-answer individual tests (on nonstop tape), a panel of expert linguists at Nebraska University concluded that Conversational Spanish had been taught to seventh graders effectively. They commented on the excellent pronunciation which, of course, was due to the native speakers used on the tapes.\*

This panel found no significant differences between the experimental groups using tape only and the control group having a regular Spanish teacher handling the tapes — as far as oral responses were concerned. In the written tests they found no significant differences between one experimental group and the control group. There were significant differences between three of the experimental groups and the control but these differences were not large.

Apparently whereas some teachers who have had no training *can* do as well with the tapes as trained teachers, other teachers lacking training will not do quite as well their first year.

This year experiments are being made in the seventh grade with last year's tapes revised, and with new

\*A full statistical report of both the seventh grade spelling and the seventh grade Conversational Spanish experiments of last year will be found on pages 81-94 in the January 1958 issue of THE BULLETIN of the National Association of Secondary-School Principals.

by **ROMAIN GIBSON**

**Director of the Ford Foundation Research Project on the Use of Tapes in the Secondary School**

**A teacher-monitor presides at a desk; a blackboard monitor takes the teacher's place at the board, and a recorder-monitor runs the machine as Mr. John Lindberg's class studies Spelling.**

tapes in the eighth grade to verify last year's findings. We are also attempting in these experiments to measure savings in teacher fatigue, cost to school boards, and the degree of supervision that is necessary while the tapes are in use. Two of the seventh grades are operating with the teacher leaving the room completely for the twenty minutes of spelling a day. Of course, the classes have been very carefully organized to be self-sufficient in the absence of the regular classroom teacher. And the teacher *does* exercise some control in that she glances quickly through the papers without checking each day on her return. She makes sure that all worksheets have been properly finished and that the work is neat.

In the eighth grade several classes are pursuing their second year of Conversational Spanish turning to a reading program the second semester. An attempt is being made to evaluate what happens to the second year of language study when there is turnover in both students and teachers. Based on last semester's test scores it would appear that a good teacher with no previous Spanish experience does well with a group of better than average students even though some of these students lack the first year's training. Since a thorough review is given at the beginning of the second year, both the new teacher and the new students seem able to catch up. A teacher (untrained) who has been in the program a year seems to be able to do very well with a group of students of average ability.

We have just started a class (average

ability) under an untrained teacher with the material brought from a central source into the room via loudspeakers. This approximates teaching by radio except the material is on tape in the central office and can be sent to the room as directed by the teacher, thus fitting her schedule.

In eighth grade spelling, also, the material is being piped into several rooms at once according to a pre-arranged schedule agreed upon by the various teachers involved. An office worker or a student starts the tape in the central office and stops the tape recorder at the end of the twenty minutes. A timer is used to signal the end of fifteen minutes and head phones allow exact monitoring so the machine can be stopped at exactly the right moment. In each of the various rooms using the tapes, a control beneath the loudspeakers (two to a room) allows adjustment of volume or the turning off of the speaker. The teachers are enthusiastic about this.

All in all it appears that the "teach it by tape" approach is a veritable

gold mine for the ordinary student, for the bright one who wishes to get ahead faster than the class, and for the slow who needs specially made remedial tapes. We have hardly scratched the surface at the ends of the curve as yet. Regularly accepted classroom techniques cannot always be used for tape presentation. We still don't have all the "know how" we need.

But why bother at all with this new medium? Because it offers interesting possibilities in the teaching of slightly larger groups than we have been used to, because it may be able to spread *good* teaching by experts in their fields, because it can save the teacher the fatigue of repetition, because it appears that a teacher can successfully teach some subjects in which he or she is untrained, because there may be a saving when the cost of textbooks is weighed against the cost of tapes and skeleton manuals, and because it may be able to cater to the needs of the accelerated student and be able to give additional drill to the slow.

**Mr. John Alden's Spanish class (Love-land School) studies the Lord's Prayer by tape. Visual aids are sometimes used in conjunction. Since the prayer is read by a native speaker, good pronunciation and intonation are assured.**

# Some Notes On DAVI'S Ancestry

Continued  
from March

by William F. Kruse

At the NEA's meeting at Oakland, California, in July, 1923, the official visual instruction program prepared by Superintendent Wilson featured the leaders of Academy and of Association in studied equality. The Association again held open house and enjoyed the prestige besides of being sub-lessor of more than one-fourth of the convention exhibit space, which it filled with all kinds of commercial exhibits from the growing visual education industry. A 100-seat screening room for continuous projection of films and slides was another Association activity.

The visual instruction program closed with a unanimous vote requesting the NEA Board of Directors to create a Department of Visual Instruction. Chairman Wilson appointed leaders from both groups on a committee to present this request to the NEA board. They were fortunate in having a powerful champion right on the board in Thomas E. Finnegan, then Pennsylvania State Commissioner of Education. His interest in visual instruction was such that he was destined soon to succeed Dr. Judd as committee chairman and, later, to head the Eastman Teaching Films development.

## Department of Visual Instruction, N.E.A.

On July 6, 1923, Finnegan moved to grant the visual instruction specialists departmental status, whereupon a substitute was moved to refer the matter instead to a committee then studying the entire NEA departmental structure. The prevailing climate was not favorable to the creation of new departments. An application by the penmanship group had been denied. The by-laws at the time required "evidence of a permanent interest on the part of at least 1,000 members," and the by-laws committee was proposing to stiffen this to require that a petition bear at least 250 signatures from an applicant group able to finance all its own special needs. To merit recognition, furthermore, such a group was required to be representative of a general educational trend as indicated by the existence of similar groups in considerable number of state or local associations, and to have held well-attended meetings for at least five consecutive years. But Finnegan's influence prevailed and so the Department was born, with H. D. Wilson designated as its first president.

The two existing organizations did not merge with DVI until nine years later. Meanwhile each year saw two and sometimes three visual education programs; the Academy customarily meeting with the superintendents in the spring, the Department with the parent NEA in the summer. In 1924, on invitation from the Department of Superintendence, DVI-NEA held its first official program one morning at Chicago's Morrison Hotel, while the Academy ran its own show the same afternoon at the Art Institute, a few blocks away. The programs did not differ in any material degree and the papers delivered at both were printed impartially in *The Educational Screen*, the official organ simultaneously of all three groups.

When the NEA met at Washington, D. C., in July, 1924, the impact of geography upon history may have had something to do with the breaking of the nominating committee slate and the election of New York's Crandall as DVI president, instead of Wisconsin's Dudley. The rest of the slate was accepted without opposition. Crandall was re-elected annually until, three years later, he declined to continue. The Seattle meeting (1927) elected Anna V. Dorris, of San Francisco; she was again chosen president at Minneapolis the following year. Her successors to the office were John A. Hollinger of Pittsburgh (1929), and W. W. Whitinghill of Detroit (1930-1931).

## Now Four Paths

The NEA's "Committee on Visual

Last issue of Visual Instruction News before merger with Educational Screen.

Education" continued until 1927, headed in turn by Judd, Finnegan and, finally, Frank Cody.

The Association seems to have merged its activities with those of the Department during Crandall's administration, its original metropolitan New York base retaining considerable local autonomy.

The Academy kept up its own separate annual meetings and from 1927 to 1932 published its own official organ, "Visual Instruction News," originally a bulletin of the University of Kansas. It had the good fortune in 1923 to secure as its secretary-treasurer Ellsworth C. Dent, who filled this post until 1932 and did much to bring about unity that year.

The Department, in 1930, had Dent on its program to present the Academy story and the following year passed a motion favoring merger, provided 1) that this would not jeopardize its NEA status, and 2) that the united organization make provision for the affiliation of classroom teachers through existing teacher organizations. The latter problem is yet to find a satisfactory nation-wide solution.

The depression of the early 30's brought added pressure for unity. Policy differences had long disappeared; clashing personalities had mellowed; there was obvious overlapping of membership and function in the three parallel groups. "In 1931," F. Dean McClusky reminisces on his DAVI Archives tape recording. "I woke up one morning to find myself president of the Academy and of the Association, as well as vice-president of the Department."

The Academy meeting in Washington in February, 1932, endorsed the merger idea; the Department meeting in July the same year, at Atlantic City, finalized it. The name of the organization (temporarily) was to be "Department of Visual Instruction of the National Education Association combined with the National Academy of Visual Instruction." The official organ was to be called (also temporarily) "The Educational Screen, combined with the Visual Instruction News."

The parent NEA, through Secretary Crabtree, welcomed the unification and offered the use of the entire top floor of the NEA headquarters building if the Department could raise the money to finance its secretarial staff. But, as McClusky reports, "the Depression made money too hard to come by." It was not until years later, with the aid of a grant from Teaching Films Custodians, Inc. that a full-time staff member, Vernon Dameron, was engaged to look after all NEA audio-visual services, and, somewhat incidentally, also serve as the

Department's executive secretary.

Fading recollection among those who had part in the professional organization's early days adds urgency to the recording, now, of our organizational origins. Some factual data here offered may be incomplete, and some interpretation, purposely held to a minimum, may well be faulty. This is but one segment—there are others of equal importance, such as the evolutions of our AV publications, AV history after 1932, the evolution and influence of the AV Industry, and many more.

If these notes on DAVI's ancestry seem a bit rambling, let it be remembered that DAVI's numerous and variegated forebears did their bit of rambling, also. Many were the individual educators, churchmen and community workers who tried on their own to apply the projected image, first slide and then film, to their respective educational purposes. Many were the makers and sellers who devoted their own time and money to produce and promote the distribution of equipment and materials for this purpose. Eventually this dual drive from the field found more and more place in the official proceedings of the National Education Association. This, with the added impetus of World War I use of visuals, encouraged more teachers to experiment, even as it attracted additional capital to produce new projectors, create more materials, publish magazines, underwrite educator research and stage NEA convention exhibits and hospitality.

A new pedagogic sub-calling was born—that of the visual education specialist. Emerging from widely diverse background he served an even wider variety of functions. Classroom teacher, school administrator, museum curator, public librarian, pastor, religious education director, YMCA worker, production collaborator or salesman for commercial suppliers, magazine editor, extension division member, university instructor, industrial training director, government agency employe, these and many more were the recruits who built the infant profession. The quadrivial course followed by the professional organizations of the visual instruction field for years after the accreditation by the NEA of the "Department" is basically a reflection of this diversity of origin and infinite variety of jobs to be done. The current philosophy of functional differentiation within organic unity was hastened by the rigors of the Depression of the '30s. DVI and its ancestors were true children of their times. It is only in knowledge of the Past that the Present takes on meaning and the Future offers promise.

# A High-School Lab Classroom

by Margaret Wojnowski

Head of Foreign Languages  
Brighton High School  
Brighton, New York

A SIMPLY constructed foreign language laboratory-classroom on the secondary level can prove of inestimable value in teaching better aural comprehension and oral fluency. First I should like to describe the physical setup of such a lab-classroom which is quite different from the elaborate foreign language laboratory in wide use in universities and colleges.

This highly workable secondary lab-classroom is now in use at Brighton High School and has evolved through several years actual high school experience. The usual 30 desks of a classroom are replaced by four rows of tables wired with 30 boxes with individual volume controls to which are attached headsets. These are connected to a tape recorder with sufficient wattage to drive the sound into that number of headsets. A phonograph with sufficient amplification and a connecting cord to the headsets is also available. Since the room is essentially the everyday classroom, the boxes are placed far enough apart so that tests can be given and discipline maintained without undue difficulty. Enough space is left between the tables so that the teacher can walk between pupils and check work. In such a classroom all the traditional work can be carried on as well as work done better with the benefit of headsets, tape recorder and phonograph. The windows are fitted with dark curtains; a movie projector with a patch cord connection to the headsets, and a screen, are available so that foreign language movies can be shown. The tape recorder and phonograph are placed on a table in front of the room for the teacher's use.

This arrangement is simple, almost

foolproof and inexpensive. The tables can be built by the school maintenance staff, covered with vinyl plastic and covered with edgings of stainless steel, at a cost of approximately \$264. This installation costs less than 30 regular classroom desks. The boxes with individual volume control cost \$63; jacks cost \$32.50; and headsets \$82.50. Incidentally, parts of the latter can be purchased for replacement. The tape recorder costs about \$230. Simplicity of operation and durability are prime factors to be considered. A second tape recorder with a mini-mix attachment costing \$10 can prove of great value if purchase money is available. The maintenance of such equipment is not exorbitant and can easily be done by the regular janitorial staff. The recorder can be sent out for repair when necessary. Actually very little repair of the latter has proven necessary at BHS. There is, however, need for regular checking of headsets and careful teacher supervision. A teacher with good discipline need not fear conducting classes everyday in such a lab-classroom.

Such equipment in a secondary foreign language classroom enables a teacher to provide much more effective teaching of audio comprehension and oral fluency with resultant better effect on reading and writing. The following description of possible procedure for three days use of the lab-classroom is presented to show how lab work on the secondary level can be an integral part of the course. It is not additional work but rather a more effective way of doing the prescribed work. There are many variations of lab procedure possible; these described have proven practicable at Brighton High School.

# SOUND advice

about audio materials  
and equipment

by MAX U. BILDERSEE

"The Blue and the Gray"  
"THE UNION" (Columbia Rec-  
ords, New York, DL 244) belongs in  
every school and library record col-  
lection along with Columbia's "THE  
CONFEDERACY" (DL 220) reviewed  
in EDUCATIONAL SCREEN AND AUDIO-  
VISUAL GUIDE in April 1956. These are  
historical documents of monumental  
proportions which make the conflict of  
1861-1865 come alive.

"THE UNION" is a book as well as  
a recording. The volume is the work  
of such outstanding historians as Bruce  
Catton (author of "A Stillness at  
Appomattox" which won the Pulitzer  
Prize in 1953 and the 1954 National  
Book Award, and "That Hallowed  
Ground"), Clifford Dowdey (whose  
"Experiment in Rebellion" is consid-  
ered one of the best source books on  
the Confederacy) and Allan Nevins  
(distinguished teacher and journalist  
who has twice won the Pulitzer Prize  
for biography). The essays involve the  
problem of the soldier, the rebel view  
of the Yankee and the relation of  
Lincoln to the war songs and war  
poetry. The volume is profusely and  
magnificently illustrated with prints  
largely taken from the National Ar-  
chives and the Library of Congress.  
And these are not all the "glory of  
war" but show much of the gory as  
well. Particularly poignant is the re-  
production of a letter from a surgeon  
to his wife, datelined "in the field near  
Gettysburg, Pa., July 9th 1863," which  
says in part, "I am tired out almost  
completely and can only say that I  
wish I was with you tonight and could  
lie down and sleep for 16 hours with-  
out stopping. . . . I do not believe  
that I could go through with another  
such week's work now upon any con-  
dition." We cannot say too much  
about the volume itself—it alone is a  
great contribution to student under-  
standing of life in the mid-nineteenth  
century.

There is no single musical selection  
which, like "The Yellow Rose of

Texas," is destined for sudden popu-  
larity, but there are many old favor-  
ites recorded on the disc portion of  
this publication. Included are "Tent-  
ing Tonight on the Old Camp  
Ground," "Just Before the Battle,  
Mother," "When Johnny Comes  
Marching Home," "Tramp! Tramp!  
Tramp," "Marching Through Geor-  
gia," "The Girl I Left Behind Me,"  
"The Battle Hymn of the Republic,"  
and of course "The Battle Cry of  
Freedom." Lesser known selections in-  
clude "Aura Lee," "The Invalid  
Corps," "Hold On, Abraham," "Raw  
Recruits" and "Kingdom Coming."

Very impressive is the reading of  
the Gettysburg Address by Raymond  
Massey. One eighth grader, upon hear-  
ing this recording for the first time,  
commented, "Now I understand why  
they didn't applaud at Gettysburg. He  
said so much!"

"The Union" and "The Confed-  
eracy" belong in every school and li-  
brary record collection.

## Interfaith Instructional Recordings

Regrettably, we could not report  
to you in February's EDUCATIONAL  
SCREEN, which gave special emphasis to  
the church use of audiovisual mate-  
rials, about three unusual recordings  
which can contribute immeasurably to  
interfaith understanding. These are  
"TEN CATHOLIC HOLY DAYS"  
(Candle Records CAN-110), "TEN  
PROTESTANT HOLY DAYS" (Can-  
dle Records CAN-111) and "TEN  
JEWISH HOLY DAYS" (CAN-112).  
Ray Middleton, who has scored per-  
sonal triumphs in many of Broadway's  
classic musicals, and is now dedicated  
to religious and educational work,  
brings his talents and gifts to stirring  
and tender recital of these Holy Day  
songs, and perfectly interprets their  
religious significance.

"Ten Catholic Holy Days" includes  
interpretations of Advent, Lent, Cor-  
pus Christi, Christmas, Good Friday,  
The Glories of Mary, Epiphany, Eas-

**ROBINS INDUSTRIES CORP.**  
BAYSIDE 61 NEW YORK

ter, Ash Wednesday and Pentecost. These are authoritative, church approved recordings presenting narration written and edited by The Very Reverend Monsignor Edwin B. Broderick who, at the time the scripts were written, was Director of Radio-TV for the Archdiocese of New York.

"Ten Protestant Holy Days" offers the stories of Christmas, Epiphany, New Year's Eve and Day, Good Friday, Easter, Pentecost, Reformation Sunday, Thanksgiving Day, Sunday and Family Week. The information and interpretations offered have been approved by prominent ministers and church officials in the United States. Reverend S. Franklin Mack, Executive Director of the Broadcasting and Film Council of the National Council of the Churches of Christ in the United States of America has expressed his endorsement and has suggested that the songs should prove very useful in the churches, on radio and in the home.

The "Ten Jewish Holy Days" interpreted in this excellent set of three recordings are Rosh Hashonah, Yom Kippur, Succoth, Simchath Torah, Chanukah, Sabbath, Purim, Passover, Tishah B'Av and Shavuot. Gerald Marks, who was prominent in the preparation and production of these recordings has endeavored to make the full meaning of the Holy Days remembered and understood by youthful listeners. He studied carefully before writing the material of this recording and has splendidly balanced both song and narration with tradition.

Each of these three recordings can be effectively used in the place of worship, in the home and in the religious school for each teaches the fundamental truths of the brotherhood of man.

#### Foreign Language Course

"SPEAK AND READ FRENCH" (Phonodiscs-Phonotapes, New York) is a comprehensive three volume course in foreign languages. Volume I deals, of necessity, with 'Basic and Intermediate' French and is designed to introduce the individual studying alone with the language. Insofar as schools are concerned, this album will find its greatest application in laboratory and library situations. It is authentic, complete and valuable. M. et Mme. Armánd and Louise Bégué of Brooklyn College and St. Lawrence College respectively supply script, prepared the text and are heard on the records. Their French is impeccable in all facets of delivery.

Volume II in this series, "Conversational French" can be employed extensively in secondary schools for

*... and Ekotape, too!*

Interest quickens, dull subjects brighten when the new Ekotape 270 A-V is used as a teaching tool. This versatile tape recorder was designed especially for audio-visual education. In music, mathematics, speech, languages — wherever it's used — it speeds response, opens new avenues of learning . . . makes teaching more efficient.

The 270 A-V is the perfect tape recorder — reproducer for classroom use. Specially designed luggage-type case with sturdy reinforced corners takes rough handling and comes up smiling. Operation is so simple even younger students learn to play and record in a few minutes. There are no delicate controls or complicated adjustments.

Delightful high fidelity tone makes listening a pleasure. Eight watt power output provides ample volume to fill an auditorium.

More, you'll be pleased to learn that the price of this fine recorder is well within the reach of the most modest school budget. Write for Bulletin R10F5 or

comprehension purposes. Second and third year students will profit greatly from hearing and re-hearing this material either alone or in class. The subjects discussed are far too broad to enumerate here, but include such topics as "Aboard Ship, Plane," "Train, Subway," "Beach, Sports," "Entertainment," "Cooking and Dining," "French History," "Politics" and so forth. There is a wide variety of valuable material on these recordings.

Advance secondary school students and college students will profit from listening to Volume III of this series involving FRENCH LITERATURE." The material is arranged chronologically and there are quotations from Descartes, Pascal, Moliere, La Fontaine and others of the seventeenth century; from Voltaire, Rousseau and others of the eighteenth century; and Hugo, Chateaubriand, Flaubert, Baudelaire and others as representative of French nineteenth century literature. These three volumes represent a valuable addition to the foreign language literature available in recorded form and can be used effectively to add zest and sparkle to instruction in secondary schools and in colleges. These are available either on disc or on tape.

### Classic Recordings

The classics, too, are represented in recent recordings. "PLATO ON THE DEATH OF SOCRATES" read in Greek and English by Professor Moses Hadas (FP 97/9, Folkways Records and Service Corp.) is also available on disc or on tape as is "ANTIGONE" (FP 97/12, Folkways Records and Service Corporation). The former lacks the brilliance of the latter, particularly insofar as the reading in Greek is concerned. Prof. Hadas reads well but without sparkle, and his mastery of English shines through his delivery of Greek. "ANTIGONE" on the other hand is performed and read entirely in Greek. It is reported that

certain passages of the original were cut although no scenes were eliminated. The purpose of this cutting was to keep the plot and movement of the drama unimpaired and yet to adapt it to modern communications media.

The parts are well read but particularly Meristella de Panizza Bové in the title role is outstanding. Both of these recordings are gems and belong in library, laboratory and class wherever Greek is taught.

### Showstoppers

Portraying the American literary scene to students is always difficult and, with the hope of being helpful, we have reported on original cast albums from time to time to remind teachers of English that here is current material available in no other form. In that group are many records and we intend to offer pithy reports on them under the general heading "SHOWSTOPPERS" as we have an opportunity to hear them. In that group we would recommend "THE KING AND I" (Decca Records DL 9008) starring the late Gertrude Lawrence and featuring Yul Brynner. This musical is based on Margaret Landon's "Anna and the King of Siam," the story of a young Englishwoman assigned to imparting Western culture to the king's court. The record can be used in secondary schools and colleges for general listening pleasure and for motivating the reading of the book. "THE BEST OF EDDIE CANTOR" (Vik, LX-1119) is suggested for classes studying the history of American theatre because in it Cantor recreates such hits as "Yes Sir, That's My Baby," "If You Knew Susie," "Ma," "Margie," "Baby Face," "Ain't She Sweet," and "Ida, Sweet as Apple Cider" among others. Cantor considers the twelve songs offered "his best" and they surely mirror the greatness he has achieved in his five decades behind the footlights.

## Educational Screen and Audio-Visual Guide

As a special service to schools in connection with the April AUDIO ISSUE of EDUCATIONAL SCREEN AND AUDIO-VISUAL GUIDE we have canvassed the recordings industry to determine services available to schools. Following are abbreviated summaries of responses received by us to a questionnaire sent to a large number of recordings producers. From the Directory you will be able to determine not only the name and address of the producer and the labels issued by him, but also the nature of recordings produced in terms of discs and/or tapes, speeds, and general policies.

We have not reviewed the records issued by every publisher listed herein. For your guidance and information, producers whose product has been reviewed in past issues of EDUCATIONAL SCREEN AND AUDIO-VISUAL GUIDE are indicated by an asterisk preceding the directory entry.

- Acta Corporation**, 790 Commonwealth Avenue, Boston 15, Massachusetts. Publish 45 and 33 rpm records; sell direct and to trade; solicit mail orders and mail inquiries. LABELS: Storyville, Unicorn.
- \***Allyn and Bacon, Inc.**, 41 Mt. Vernon St., Boston 8, Mass. Publish 33 rpm records; sell direct; solicit mail orders and mail inquiries. LABEL: Alpha.

### Description

Through the eyes of Mostafa, a twelve-year-old Mohammedan, the film shows and interprets life in Morocco as experienced by Mostafa as he leaves his home village, journeys to a city to enter school, and studies there.

The beginning sequence in the film shows that Mostafa has a special reason to see the unchanging scenes about him with new emotion, and to listen more intently to the unaltered pulse-beat of his small, uncrowded world. Tomorrow he will say goodbye to family, friends, and childhood for at least

a year, and, on foot and unaccompanied, begin the long journey to the city where he will go to school and learn about the exciting world outside his tiny Moroccan village. So, with mixed emotions, he watches the storks fly above the dark-thatched roofs of the dingy hovels; and looks while little girls in hobble skirts enjoy hopscotch, and laughing boys in long, black pants play leapfrog in the dust.

Mostafa hears, unconsciously, the imam or priest's distant call to prayer, but much more obviously the whistle of the rough hewn flute, played by the young goat herder on the rocky slopes. He sees two women drawing water from the common well, and others making "kooskoos" just as their mothers' mothers did; meanwhile, their men folks till with ox-drawn "sticks" their thin, ancestral fields. All this he treasures in his heart, but unashamedly delights to know that, unlike these, the chance has come for him to seek afar a fuller life.

With the warm, good wishes of his family, and the uncertain charms of Fatima's hand about his neck, and a cup of oil-water on his path, Mostafa is on his way. Along the trails are seen stout-legged men with heavy packs,

and donkeys almost hidden beneath their bulky loads. Later in the day, while passing through a village, Mostafa is attracted by the familiar chant of children's jumbled voices coming from a mosque. Approaching, he smiles to see a group of little boys with scribbled slates, sitting barefoot on the floor, reciting verses from the Koran. The imam nods recess, and the ragamuffins hustle, like American kids, for the exit and their shoes. Instead of playing marbles, though, they wash their slates, and in a special place, lest the name of Allah written on the slates come, per-chance, to rest where feet may tread.

Upon explanation of his mission, the imam grants Mostafa shelter for the night. While Mostafa makes his pallet on the floor and says his prayers to Allah, the narrator calls attention to several basic tenets of Mohammedanism: "Purity is half of faith . . . religion is as big as life . . . the faithful pray five times a day."

Another day and farther on, Mostafa sees new and exciting things: A great new dam, and machinery doing the work of many men. One battered truck and an ancient road machine are quaint and lonely evidence that the Industrial Revolution passed one day, like the self-righteous Levite, on the other side. The haggard workmen, breaking stones by hand and hauling them in baskets, seem unaffected by another revolution occurring in their midst — freedom from foreign will. This new-found freedom from the Spanish and the French is the spirit which moves a generation of Mostafas toward the city, and learning, and a better life for all.

At last Mostafa reaches the city — monotonously humble and white. Past open-air shops, and hawkers, and traders, and beggars in the street, he finds his way to an inn — a refuge for travelers and their animals. Here, where lodgers build their fires and cook their simple meals in the expansive patio, Mostafa accepts the invitation of a group to share their food and hospitality. Everywhere Mostafa turns he meets with understanding, kindness, and a helping hand which is accounted for, like other good behavior, by the teachings of Mohammed.

## The KEYSTONE Overhead Projector

is really a

## MULTI-PURPOSE Projector

usable for:

- Standard (3¼" x 4") Lantern Slides.
- Tachistoslides (4" x 7"). 2" or 2¼" Slides.
- Strip-Film. Micro-Slides.

It's a Real Daylight Projector — the lens system concentrates the light over a relatively small area, so that clear, brilliant projection is attained.

It is small and light — weighs less than 20 pounds. Versatile and efficient.

Our Local Representative Will Demonstrate Upon Request.

**KEYSTONE VIEW COMPANY, Meadville, Pa.**

Since 1892 Producers of Superior Visual Aids

About the town, in weaving, tanning and tailor shops, running errands, and washing clothes, are seen the boys, like Mostafa, who work to go to school. Friendships quickly form and loneliness subsides as work, and school, and play, and dreams, like intermingling rivulets, together form a stream.

Mostafa's dining in the home of an upper-class friend affords the opportunity to observe manners and customs in contrast to those of the West. In the school, Mostafa and his classmates are beginning to see that beyond the lesson and the lecture wait the community and the nation for their ministry. The black veil of superstition, and the inequality of women; impoverished soil, and a ragged, hungry people; a newly independent nation, still struggling in her chains—these are problems that light the vision, and stir the ambitions of wide-eyed Mostafas in the *Country of Islam*.

#### Appraisal

*Country of Islam* is a film of high technical and educational quality and should find wide acceptance among social studies teachers at the elementary- and junior-high-school levels. It is expected that students at these levels will identify themselves, in a measure, with Mostafa, and, by empathy, share his environment, activities, and problems. To the extent that this occurs, attitudes of understanding and appreciation concerning the welfare of an underprivileged and struggling people will be evoked.

— Preston Mitchell

### BEACH AND SEA ANIMALS

(Encyclopaedia Britannica Films, 1150 Wilmette Avenue, Wilmette, Illinois) 11 minutes, 16mm, sound, color or black and white, 1957. \$120 or \$60. Second edition. Teacher's guide available.

#### Description

This film shows the habits and behavior of a wide variety of animals that are found in and near the coastal waters of the United States and Canada.

It opens by telling that animals are adapted to their particular environment and pictures hundreds of gannets, an osprey landing on its nest, and an egret searching for food. The film then explains the importance of fish as a food for many beach and sea animals and briefly shows a variety of interesting fish including a butterfly fish, an angel fish, a bat fish, and a porcupine fish.

Next, a seahorse (which the narrator explains is also a fish) is shown as it catches and eats a shrimp. A frogfish

or angler is pictured extending its "fishing pole" and dangling its "bait" and a spotted eel is shown briefly.

The film continues by showing a variety of crabs including a sponge crab which places bits of live sponge on its back for camouflage; fiddler crabs which spend half their life on land and half in water; a land crab; and a calico crab. A stream of water passing over the gills of the calico crab is shown, then a green spider crab eating a dead minnow illustrates that many of the crabs are scavengers.

The related sea cucumber, sea urchin, and starfish are all shown to have tube feet. Also pictured are close-up views of the sea cucumber's mouth; a sea urchin's prominent, stiff spines which are used for protection and, by some, for walking; a starfish burying himself in the sand for protection; and a serpent starfish's snake-like, flexible arms which easily break off when grasped by enemies.

Scenes of a variety of sponges, a sea anemone, and a flower worm show that all of these animals look like plants. A conch shell is pictured being used as a home for both sponges and a toad fish; clown shrimps are shown among the tentacles of a sea anemone; and the narration tells that the flower worm and the fire worm are relatives of the land dwelling earthworm.

Next shown is the manner of movement of a fighting conch, a tulip shell, a nudibranch, and a file shell. Then an octopus and its young ones are shown inhabiting an abandoned sea shell. The narrator tells that octopuses, conches, and nudibranches are all mollusks.

An amusing closing sequence shows a hermit crab giving free transportation to a number of animals that have made their home on the snail shell that he has inhabited. Pictured as "free loaders" are a sea anemone, a dwarf seahorse, barnacles, and a flower worm. The hermit crab is shown emerging from the shell and the concluding narration tells that the film has shown only a few of the amazing animals that live here and perhaps the audience would like to learn more about them through books or an actual trip to the beach.

**Evaluation**

This film combines excellent photography with interesting, and sometimes amusing, content to present an educationally valuable teaching tool for general science and biology classes in the intermediate and junior high grades. All of the animals pictured are interesting in appearance and habits; e.g., the graceful beauty of the soaring gannets; the angling of the frogfish; the hermit crab carrying an "animal

hotel" on his back. Because of this, *Beach and Sea Animals* should encourage the viewer to learn more about the habits, behaviors, and habitats of these animals. This film could be used profitably in preparing the students for a trip to the seashore, lakeshore, or stream. It should also help stimulate the viewer to start a shell collection and to read more about the beach and sea animals. Although the film does not emphasize classification, it does show representatives from the many different groups of animals—birds, fish, crabs, worms, starfish, sponges, and mollusks. The black and white print is educationally useful; however, the color print is much more stimulating and interesting to watch. The narrator has a warm, friendly voice. His informality and well-placed emphases add much to the effectiveness of the film.

—George Vuke

**THE JAMESTOWN COLONY  
(1607 Through 1620)**

(Coronet Instructional Films, Coronet Building, Chicago 1, Illinois) 16 minutes, 16mm, sound, color or black and white, 1957, \$150 or \$82.50. Teacher's guide available.

**Description**

Dramatized narration, animated and overprinted maps, and actual dialogue are used in combination to tell the story of the founding of Jamestown Colony between 1607 and 1620.

Taking advantage of the costly restorations and reconstructions which were made in connection with The Jamestown Festival of 1957, the film takes the viewer on board ship for the voyage from England to the new world. Several of the passengers are

introduced and the fact that the entire venture was financed by the Virginia Company of London is revealed. At the end of four months, the group of one hundred settlers lands on America's shores.

An overprinted and animated map follows the men as they explore a long river they name James River in honor of their king. The men choose a site on a peninsula for their settlement about sixty miles upstream where they will be safe from the attack of Spanish warships. One month later, the sailors of the three ships making the voyage return to England leaving but one small ship behind. Now the destiny of this first permanent English settlement in America is in the hands of the hundred men. They immediately begin to build a strong fort for protection against the Indians.

All is not well with the young colony, however, explains the narrator. Disagreement among the members of the council and the failure to replenish food supplies soon lead to confusion and starvation. By autumn, less than half of the men survive the plague and fever caused by bad drinking water. The future brightens considerably when the spring plantings mature and food for the winter is assured.

Adversity seems to stalk the colony. During a trading expedition up the James River, Captain John Smith who has become a leader of the men is taken prisoner by Indians previously considered as friendly. Those in Jamestown think Captain Smith to be dead until he returns several months later in good health and explains that his life was spared by Chief Powhatan when the Indian princess Pocahontas pleaded for his life. By the end of the year, Captain Smith is made president of the council and one of his first acts is to declare that no man will eat unless he does his share of the work. Under his leadership, the colony begins to prosper and, later, women come to the settlement from England and English family life begins at Jamestown. Industry comes to Jamestown at this time, also. Glass-making becomes a thriving business and fine glass products are shipped to the mother country.

The narrator states that, again, progress and survival of the community of five hundred persons is threatened. Rats infiltrate the warehouses and ruin the majority of the food. By the spring of 1610 only fifty of the five hundred persons are left alive.

Just as those who remained have decided to abandon their homes and push further into the wilderness, ships arrive from England carrying new set-

tlers and enough food supplies to last a year. The dejected settlers are pictured returning to their homes and under rule of a series of strong governors, such as Lord Delaware and Sir Thomas Dale, the colony grows stronger.

During this time, John Rolfe has been experimenting with the growing of tobacco. Several years later he succeeds in marketing his tobacco in Europe and marries the Indian princess Pocahontas.

In 1619, representatives of eleven neighboring settlements which have sprung up around Jamestown meet to solve common problems and the beginning of representative government in America is begun. This same year, the

first African Negroes arrive aboard a Dutch ship beginning another important era in America's history.

By 1620, Jamestown is solidly planted in America and serves as the capital for the colony of Virginia for nearly one hundred years.

#### Appraisal

Teachers of history in grades throughout the intermediate, junior-high, and senior-high-school levels should be able to use *The Jamestown Colony (1607 Through 1620)* for a variety of purposes in connection with studying the early colonization of America. The use of authentic settings and ships provides a realistic at-

## IS THERE COMMUNICATION WHEN YOU SPEAK?

(McGraw-Hill Book Company, Text-Film Department, 330 West Forty-Second Street, New York 36, New York) 18 minutes, 16mm, sound, black and white, 1957. \$95.

### Description

The question "Is there communication when you speak?" is dealt with in this film by way of a study of the communication process, the requirements of effective communication, and the responsibilities of a speaker who is attempting to reach and influence the behavior of his audience.

In a typical classroom situation in a speech class Bill Williams expresses skepticism about the relevance of this "required" course to his future field of engineering. However, a recent socially embarrassing incident, caused primarily by his failure to communicate, and the introductory remarks of the professor highlight the importance of effective communication and serve to modify Bill's initial impressions. At the chalkboard the professor describes the nature of any communications system as containing (1) a speaker who receives stimuli which (2) arouse a thought, feeling, or idea; (3) an idea A in the form of messages is transmitted usually through light and sound waves to (4) other people who recreate a similar idea A<sub>1</sub> in their own minds. Failure to gain this resemblance occurs when the idea takes the forms B, C, D, etc. Also, this system is seen to include a "circular" relationship between speaker and audience in that the speaker observes the audience's response to his message.

This sequence is followed by student demonstrations in presenting an organized speech. The professor then summarizes the important requirements that were exemplified: a definite and clear purpose for speaking, ideas worthy of an audience's attention, a central theme developed through supporting details, and a feeling of sincere conviction on the part of the speaker.

In a further development of the

components in the communication process the professor identifies the verbal and visual signals that may facilitate or interfere with communicating ideas. Voice, articulation, pronunciation, and language, as well as appearance, posture, gestures, movements, and visual aids are discussed through illustrative examples of good and poor speaking. In describing the character of the four basic components—the speaker, the audience, the occasion, and the speech itself—the film stresses particularly the speaker's responsibility in familiarizing himself with the intended audience of his message.

In the closing sequence Bill Williams experiences what is meant by obtaining "circular response" as his audience warms up to him in a speech before the student body. His ideas appear to gain clarity, the words flow more easily, and he knows that he is communicating because he is enjoying it.

### Appraisal

Intended for high school and freshman college classes in speech, this film describes simply, yet without serious distortion, the constituents of the communication process and the conditions and requirements for effective communication which they involve. The discussion by the professor, combined with his effective use of the chalkboard, assists in maintaining organization and continuity in the film contents. In addition, related examples, drawn from student presentations before the class and, to some extent, from incidents outside the classroom serve to highlight and clarify the principle ideas.

There is one point, however, which may require some qualifications by the user of the film. While the film suggests that in effective communication the audience of a communicator will formulate an idea A<sub>1</sub> approximately similar to the idea A as possessed by the communicator, it leaves the impression that only one variant of idea A, that is, A<sub>1</sub>, occurs consistently in the minds of every member of the audience. Perhaps more accurately, these variants should have been symbolized as A<sub>1</sub>, A<sub>2</sub>, A<sub>3</sub>, etc., instead of A<sub>1</sub> to suggest the variety of approximations that are likely to occur in any "successful" communication.

This film and others in the series can serve not only to cultivate more effective speech and communications behavior but also to impress high school and freshman college students with the fundamental nature of a process in which everyone is almost continually involved.

## A TRIP TO THE MOON

(Encyclopaedia Britannica Films, 1150 Wilmette Avenue, Wilmette, Illinois) 16 minutes, 16mm, sound, color or black and white, 1957. \$180 or \$90. Teacher's guide available.

### Description

This film uses animated photography of models and other photographic techniques to take us on an imaginary trip to the moon on which we observe various facts concerning the moon and the earth.

After our space ship takes off and leaves the earth's atmosphere, we observe the curvature of the earth and the brightness of the constellations against the intensely black sky. We see the terminator or sunset line as it sweeps across the rotating earth.

Next, by animated drawings, the comparative sizes of the earth and the moon are indicated and the moon's orbit around the earth is shown.

As the result of careful planning, the moon and our space ship will meet at a pre-determined point in space. We cut the power of our space ship while still in the gravitational field of the earth but the force of this field is overcome by the gravitational pull of the much closer moon. Soon we will have

to use braking power to keep from crashing into the moon; we do not land, but hover above it and observe its phases and physical features. By speeded-up photography we see the waxing and waning of the moon and learn why we have never seen its other side.

We move in for a closer look at its physical features at half moon. We see its mountain ranges which are jagged because there are no water or wind eroding forces. Clavius, one of the largest craters on the moon, and others are closely seen. Upon closer observation, the dark areas which look like seas are seen to be lakes of melted rock. We also observe deep crevices.

A special thermometer is lowered and we see the temperature in the sun is 212° Fahrenheit; however, at night it may drop to minus 250°. A marker is dropped which indicates that this is the first lunar expedition and we observe that it seems to weigh less on the moon than it did on earth. We learn that because of the moon's smaller mass, the objects weigh one-sixth of what they do on earth.

As we leave the moon to return home, we observe the far-away earth to which we will return shortly. We know that this trip, although based on known fact, is imaginary but may one day become a reality.

### Appraisal

Here is an interesting and exciting approach to the study of certain facts concerning the moon and the earth. The imaginary trip into space serves to dramatize the presentation of facts concerning the physical features of the moon, its utter desolation and lifelessness, the origin of craters and seas, and certain problems of space flight to the moon. The views through the space ship's port hole bring to life what would otherwise be static, less interesting subject matter. Many of the scenes in this film consist of the photography of excellently constructed models of the moon. Close-ups of these models clearly and realistically visualize the moon's topography. In this rocket age, the content and manner of presentation should be appealing to a wide audience range, however, this film probably will have the most use on the intermediate- and junior-high grade levels. Senior-high and general-adult audiences will also find it interesting and educational. There is the possibility that the viewer will become so involved in the exciting flight itself that the objectives for seeing the film may not be fulfilled. This can be minimized, however, by the teacher's preparation of the class for seeing the film.

—George Vuke

Wherever It Must Go

**WHEELIT** requires less effort to get it there!!

**Non-folding Wheelit No. 4102**

Useful for transportation and stationary use of projection equipment, books, typewriters and all kinds of school supplies. Balances load perfectly on rear wheels.

Wheelit, the new combination transportation and projection table, takes anything heavy such as typewriters, adding machines, books and projection equipment anywhere . . . quicker, easier and safer . . . upstairs or down, around sharp corners, down long corridors, over curbs and other changing levels.

### THE 49 TO 1 CHOICE OF CALIFORNIA CO-ORDINATORS

In a recent demonstration of competitive makes, audio-visual co-ordinators from 50 California schools voted overwhelmingly for Wheelit (49 to 1) and filled out evaluation sheets, stating their reasons.

They particularly liked its easy steering, the large pneumatic-tired rear wheels and rubber-tired casters in front, the large Formica-top platforms of thick, sound-absorbing wood, the lack of vibration, and the convenient foot brake for stationary positioning during film projections.

### WHEELIT — DON'T CARRY IT!

WHEELITS have a load capacity up to 300 pounds, heavy web straps to secure loads, spacious platforms conveniently located 14 and 41 inches above floor level. Your WHEELIT makes heavy lifting and fatiguing carries unnecessary.

See Your Audio-Visual or School Supply Dealer or write us for descriptive literature and prices.

**GRUBER PRODUCTS CO.**

**Dept. ES, Toledo 6, Ohio**

**Folding Wheelit No. C-402**

Folds compactly for storage in limited areas or fits easily into auto trunk compartment. Keeps load in perfect balance on stairways or curbs, as illustrated above.

**Precision-built . . . to last!**  
The all-steel construction (except platforms) and precision workmanship insure smooth, efficient operation and many years of satisfactory service. There's nothing to go wrong . . . no maintenance or repair service, when you own a WHEELIT.

## SERIES ON CANADA

Charles Scribner's and Sons, Inc., 59 East Van Buren Street, Chicago 5, Illinois. Filmstrips are in color. Grade range includes sixth to eighth grade. Subject area is social studies. Series includes eight filmstrips as follows:

Canada — Treasure Land of the North Filmstrips.

- C1 CANADA — OUR GOOD NEIGHBOR TO THE NORTH, 27 Frames
- C2 CANADA FROM SEA TO SEA, 30 Frames
- C3 THE HISTORY OF CANADA, 28 Frames
- C4 THE PEOPLE OF CANADA, 28 Frames
- C5 CANADIANS AT WORK, I, 29 Frames
- C6 CANADIANS AT WORK, II, 28 Frames
- C7 CANADIAN HANDICRAFTS, 29 Frames
- C8 CANADIANS AT PLAY, 27 Frames

This series was designed to give an understanding of Canada, its people, and its way of life. The entire series

was reviewed as a whole and it gives a very lively summary of Canadian life from its historical beginning to the present time. A well balanced comparison of similarities is made between Canada and the United States with the unity of purpose and interest stressed throughout. A good summary of information and important points are emphasized in each individual strip.

The color pictures and graphic presentations are of excellent quality throughout the series. The vocabulary is easily understood for the grade range and varied enough to be interesting. The entire series showed careful planning and selection of material. The opening strip serves as a good introduction to the entire series. The accompanying teacher's guide is well planned and developed. It proved to be a useful tool in presenting this series.

This material may be adapted to other subject areas, such as art and the language arts in particular, in connection with a unit study of Canada. The previewer highly recommends this series for use in the upper grade classroom as a teaching aid.

## CHRISTMAS NEIGHBORS SERIES

Society for Visual Education, Inc. 1345 Diversey Parkway, Chicago 14, Illinois. Filmstrips are in color. Grade range includes all middle and upper grades in the elementary school. Subject area includes social studies. This filmstrip series includes four individual filmstrips as follows:

- CHRISTMAS WITH OUR WORLD NEIGHBORS
- CHRISTMAS IN NORWAY, 34 Frames
- CHRISTMAS IN MEXICO, 64 Frames
- CHRISTMAS IN GERMANY, 57 Frames
- CHRISTMAS IN ENGLAND, 39 Frames

Note: Two records accompany filmstrips for narration.

This set of Christmas filmstrips was a very enjoyable and valuable aid in

the learning area of social studies. Each strip can be used as enrichment material in the study of that particular country or they may very effectively be used at the Christmas holiday to contrast ways of celebrating Christmas in different lands. The coloring used in the series is excellent. The recordings that accompany this are of excellent quality. The musical background and narration are pleasing to listen to and are of great value as music appreciation matter. In the opinion of the reviewer any portion of this set, if not the entire set, would be a valuable addition to your filmstrip library.

### FRIENDSHIP FILMSTRIP

"CROSSROAD AT CEDAR-MONT," 64 frames. Friendship Press, 257 Fourth Avenue, New York 10, New York. Filmstrip is in black and white. Filmstrip is designed for adult viewing. Subject area includes human relations.

This filmstrip concerns problems in human relations. It is to be used to stimulate group discussion of a very controversial subject. The problem presented is that of a Negro family moving into an all-white community. Reactions of various individuals are presented.

This filmstrip is accompanied by a guide that gives detailed instructions for its introduction, use, and discussion follow-up. Included also is the script, to be read with each frame. If used according to the guide, this strip should be extremely valuable to use with adult discussion groups.

### SPORTS INSTRUCTIONAL 16 mm "LOOP" MOVIES AND 35 STRIP FILMS.

The Nation's most popular sports visual aids at the lowest prices. We produce and distribute films on over thirty sports — including football, track, wrestling, swimming and diving, cheerleading, baton twirling, badminton, tennis for men and women, volleyball, synchronized swimming and many others. Priced from twenty dollars. Send for free film catalog.

# SHOW WHAT YOU MEAN

... in brilliant detail  
with the AO SPENCER OPAQUE PROJECTOR

#### SHARPEST IMAGE

Coated objective optics cut internal glare and reflection. With the exclusive all-glass reflecting system, this guarantees a sharp, crisp image on the entire screen...edge to edge...corner to corner.

#### 1,000 WATT INTENSITY

High-powered illumination shows a clear, detailed picture in a semi-darkened room, or even a normally lighted room with shades up.

#### SO EASY

Teaching and learning are much easier with this unique projector.

You just flip a switch to project a big, bright picture of your teaching materials exactly the way you want to show them.

#### STURDY, PORTABLE

The projector is built of rugged, lightweight, lifetime aluminum. Carry it anywhere.

## MAY WE OBSERVE

• The Fifteenth International Conference on Audio-Visual Christian Education will be held in two sections this year, both on the beautiful and adequate campus of Penn State University at State College, Pa. The first section, the First National Executive Consultation on A-V Christian Education, is scheduled for the period from Friday evening, August 15th, to Tuesday noon, the 19th, and is expected to bring together international, national, and denominational leaders as well as A-V and other leaders from college, university, and seminary faculties. Producers and manufacturers are also invited to this phase of the total workshop. We believe that this is a good move. The top leaders of the church need to take a newer and closer look at the usefulness of the mass media in their own leadership roles, and in the program life of the churches and organizations which they seek to lead and direct.

• The second phase of the Penn State "Workshop" will be for the period August 19-23, and its program will parallel rather closely that of other years. Naturally, it is assumed that those who come for the first phase of the "Workshop" will remain right on through this second phase which brings together a broader cross section of the church's leadership for a close look at important practical as well as theoretical problems and questions. With much leadership coming from the faculty of our host institution, distinguished for its leadership in research on aspects of mass media communication, we are guaranteed some fruitful seminars, workgroups, and general sessions. Ministers, and Directors of Christian Education, and A-V coordinators in local churches and in area organizations, will find this latest phase of the "Workshop" especially helpful to them.

• May I salute my colleague Max of the "Sound Advice" Department of

this magazine! He did a perfectly swell job of relating his information, insights, and critical judgment to the church emphasis in the February issue. For this I am certainly in his debt, and by this he certainly scared me off from trying to reciprocate in this present issue with its "audio emphasis." It seems best for me to keep out of the Sound Department — except when I want information and help. Then I will go to the source of such wisdom — to Max. One of these issues I may cut loose and do a piece or two on the audio half of the A-V unity. I've got some ideas I'd like to air. They relate both to the inherent quality of hearing-side of much of our material as well as to our low ceiling-imagination in the use of both audio-visual aids, and audio aids. But this can wait! Now I salute the AUDIO, and shut up!

—WSH

## Critical Notes on

### "His Way, His Word" Films

Biblical films take the measure of the producer as no other films. They require film-know and Bible know-what, and mighty few producers can get these two essential ingredients blended as the biblical film requires. Either one or the other is lacking, and sometimes quite a bit of both.

When The Catchings & Denker Corp. set out to make biblical films it is altogether possible that they did not know their films would take their measure on a number of scores. Yet, all one has to do is to subject to careful study any one of the three films in the "His Way, His Word" series to find how wide of the mark of good films they have come. Put another way: What are these films good for? What do they say; convey; mean; for what purposes would they be used in the average church?

According to the producers, the film *The Prodigal Son* was made "to make

clear how much forgiveness means to the person who is forgiven." This, of course, is NOT the intention and the teaching of the parable explicated via their film. They take to the parable the meaning which they extract from it. One would hardly call this the right approach in making a film on this classic parable. It would seem to this reviewer that they would have found out what the parable meant, was all about, and explained this in their film.

However, they not only lug to the parable what they wish to carry away, they do not bother to seek out the context or occasion of this parable. It is plainly stated in the opening sentences of Luke 15. The occasion was when Jesus was *speaking* to certain "tax collectors" and "sinners" who were drawing near. When this was happening, certain Pharisees and scribes said (to those pressing to hear Jesus) that he was not a worthy teacher for them to listen to since he broke the Law by associating and eating with sinners. That is the occasion, the social and situational context of the parable. Could anything be more clear?

Not for the makers of *The Prodigal Son*. For them the occasion is one of Jesus *eating* (not speaking). The film opens with Jesus sitting at table with quite a roomful of people. To the door of this room come certain Pharisees and scribes to complain and to criticize. This is a totally different context, and apparently unimportant to the producers.

In the film, several of the disciples hear the critics, and Peter appears quickly to do something. He motions to Jesus and requests that he give these critics one of his parables. Jesus immediately obliges. . . . The cameras begin to roll, and for the next 20 some minutes we see the producers' misunderstanding of this classic parable.

Our producers get carried away by the filmic possibilities of what the parable uses just eight words to suggest, "loose living." (RSV) To elaborate and exaggerate this to disgusting

lengths does not tax the imagination and scholarship of the producer.

While the invention of plausible incidents in good taste is legitimate in biblical filming, the creation of fictional incidents in general bad taste is beyond all excuse. I refer specifically to the scene showing the householder's gluttonous eating, and to his slapping the Prodigal in the face with a chunk of meat from his table. This repulsive bit of acting, hardly acceptable in any film, is totally out of place in a film for church groups.

Unable to discern the occasion of the parable from the plain language of the Bible, the core-teaching of the parable escapes them totally. (See their quoted purpose above.)

Jesus asked his critics to listen to a story which sets in sharp contrast two different attitudes toward a sinner. His critics are asked to evaluate the attitudes of the Father and the Elder Brother and choose one for themselves. This is the point of the story: the locus of its teaching. This, our producers miss completely.

The fine points of this classic parable being too difficult for the producer, we are treated to some phony authenticity—very modern garbage being given to some very un-Palestinian swine. Great trouble is taken to give us authentic sets and scenery, but we see the Prodigal and his friend, come near his home, hang around a while, be recognized by servants, before the Father happens to see him. All this non-biblical pseudo-drama is substituted for the real drama and emotions summarized in "while he was afar off he ran to meet him." Here is the bone and sinew of real and compelling drama—and it's ignored in favor of Denker's tinkering.

When we get to the end of the 32nd verse of Luke 15 we are not told what the effect of the parable was on those who "murmured." This is no problem to Denker. His film shows at least one of the critics admitting his error and expressing a willingness to eat with sinners, also, and shows him pushing toward the food.

While there is no basis for it in the biblical text, this film has one very fine dramatic touch: The friendship of the Prodigal for the old swineherd, and his kindness in taking him on his return home. This is acceptable supposition. It does not distort nor subvert the obvious meaning of the parable.

This film has good technical qualities—casting, acting dialogue, and sound. The color may be a little too lush for some viewers, but I found it pleasant enough.

The other two films in this series,

*Where Your Treasure Is*, and, *The Fruitless Fig Tree*, do not set out to explicate the scripture. The first one attempts to show "how important it is to do for others in the spirit of love and understanding." The second (above) tries to show "how much forgiveness means to the person who forgives."

These, indeed, are excellent film-themes and it is a great pity that Catchings & Denker did not stick to them all the way.

In both films a good story is invented. They are plausible and they come alive. The casting is good, the acting is competent, and the dialogue (especially in parts of *Fig Tree*) is

beautiful and penetrating.

Instead of resolving these stories in terms of their own innate dramatic potentials, Denker chooses to hitch them on to some biblical text. It is at this point that they fall apart as biblical films. No one will complain about his fictional stories. They are plausible enough, and they carry human and dramatic values. It is his mishandling of biblical material that bungles the job, and cuts the usefulness of the films. Why he did not choose to let his stories stand on their own legs is anyone's guess. Set in "Bible times," they resemble many of the best in his "The Greatest Story Ever Told" radio series.

The newest PROFESSIONAL JR. Tripod with removable head, has these modern improvements: Simplified camera attaching method • Telescoping pan handle with adjustable angle, & sockets for left, right or reverse tilt • Pan tension adjusting knob, independent of pan lock • Cast in tie-down eyelets • Self-aligning double leg locking knobs. Prices subject to change without notice

What he does is this, and it shows poor dramatic judgment and less understanding of the Bible: When the principals in his stories are nearing the climax of their emotional tension, and something has to give pretty soon, they somehow get to Jesus by the insistence of another person. In *Fig Tree* it is wife Miriam that gets Abnor to go; in *Treasure* it is the village Elder. How it happens that Jesus is saying just the right thing to bring light, and love, and repentance to these troubled souls is beyond this reviewer, and indeed, the producer, tool.

When Denker searched for a biblical story or saying which, in the mouth of Jesus, would "convert" poor old unforgiving Abnor, he picked Luke 13:6-9—the parable about the fruitless fig tree. He chose it without bothering to note the context in which this parable was spoken. The question Jesus was dealing with in this parable (which the context makes clear) has nothing whatever to do with Abnor's type of spiritual ailment. Another instance of Denker's disregard of context.

The treatment in *Where Your Treasure Is* is similar. It is a good and plausible story, set in Palestine. Despite over-lushness in costumes, color, and settings, it is a good story. But, instead of bringing off the story in terms of its own dramatic possibilities, and it has many, the producer chooses to drag in a scriptural saying. To do this he botches up the whole production. When Aaron is completely stumped in trying to win the affections of the little girl he has adopted, the village Elder drags him off to Jesus, who, again, just happens to be saying (Matt. 6:19-21) "for where your treasure is, there will your heart be also."

Even before Aaron has heard this, he acknowledges the spiritual stature of Jesus, and the village Elder calling him "The Messiah," a mighty dangerous thing for anyone in Galilee to do at that time, and a fantastic confession for the most revered Jew in the town. In an instant Aaron repents; in a flash his mind is illuminated, and he will now win his adopted child with love instead of fine clothes, sumptuous food, and soft beds.

If somehow this corny biblical tail piece could be cut off this film, it would be just the thing to show to prospective adoptive parents. It would make them probe deep into their major motives, open and hidden, and help each of them get off to a better start in their difficult role as foster parents.

As biblical films, we now have three brand new reasons why some of us

who see and use a lot of motion pictures are just about ready to suggest a moratorium on the production of biblical films. They are good, but not good enough. What if they do have ingratiating technical qualities! If the text is incorrect, printing it on expensive paper will hardly help! (From United World Films, Inc., 1445 Park Ave., New York 29, N. Y.; about 30 minutes each; color; rental not known.)

## Geriatric

Grandmother is living with her married daughter. One night she overhears the young couple talking about the strain her presence has placed on their home life, and asking each other what they can do with her. There follows some intense scenes between mother and daughter, and wife and husband. A social worker is visited; a plan is evolved; and at last grandmother goes to a home to live. We see her in the first week of her new life and she is doing pretty well, everything considered, and a better adjustment than anyone concerned at first expected seems assured.

As I see it, there are three audiences for this film: Young couples who have no idea how quickly they will be "old," and alone, perhaps; middle-age couples who may face at any time the problems of their aging parents; and, these older people themselves. All three can learn much from this film.

Like many Film Board of Canada films, this one is pretty stark. It is not a prettied-up job at all. It seems to this reviewer to over-do plainness just a bit. It is truthful; and the taste of truth is a little on the bitter side, but it must be faced nonetheless.

Therefore I recommend *The Yellow Leaf* to the above groups, and to one more: To church and community boards which need to deal with the problem of old-age housing and care. (B&W; 30 minutes; from McGraw Hill Text Films, 330 W. 42nd St., N. Y. 36.)

## Mid-East Background

Some churches may want historical background on Middle-East countries when they take up that subject in the fall of this year. If they do, they ought to keep it short and make it interesting, and one way to do this is to show motion pictures, especially films tailored for the job. I refer to *Ancient Egypt* and *Ancient Mesopotamia*. In eleven minutes these films tell much and show a lot.

Each one covers a lot of ground.

They show the contributions to the present life of the world which came out of these ancient lands. While the titles don't sound interesting, I found the films very interesting and informative, and a fine summary. They are recommended for Junior Hi and up as a background for reading, for study and discussion, and as a background for films dealing with the modern life and problems in Egypt and Iraq. (From Coronet Films, Coronet Building, Chicago 1, Ill.; rental not known.)

## Mid-East Foreground

Filmed recently in Egypt, Lebanon, Syria, Jordan and Israel, *The Waking Middle East* presents in fine color photography the monuments of ancient glory as well as the contemporary life of the modern Middle Eastern nations and some of their problems.

Film-wise this is an excellent travelogue. In its 31 minutes we see many important and beautiful and ancient places. In the words of a release from Unusual Films, the producer, "It is an arresting discussion (by Bob Jones, Jr., President of Bob Jones University) of current problems in the light of the prophetic Word of God." (Color; rental \$15.00; from Unusual Films, Greenville, South Carolina.)

## Alcohol Profile

As I looked at the 30-minute B&W film, *The Profile of A Problem Drinker*, I began to wonder if there was an audience for this film. At first I could not think of one. Then, as the film developed its story, I decided that its audience is a pretty big one—the social drinkers. They are the basic source of all "problem drinkers." Here is the history of a young man from his no-drinking days to his no non-drinking days.

In documenting David's life-with-alcohol, the film indicts social drinking (without meaning to do so, it seems to me) and gets the problem pretty well in focus without too much psychiatric nonsense. There is, as usual, a "reason" for his drinking. It is frustration in his vocation, and not in the social drinkers who rammed the stuff down his neck; and not in his (obviously acquired) habit of an alcoholic escape from immediate unpleasant reality.

While it won't look much more appetizing to them than a casserole of spinach at a birthday party, I think the young adult and couples clubs of many churches ought to see this film. It might help some potential Davids see themselves in time. (B&W; 30 minutes; from McGraw Hill Text Films,

## Set In Families

According to the scriptures we are "set in families," but the form and texture of family life has changed radically even in recent decades. When churches and church boards, and community agencies of all kinds—rural as well as urban—are trying to understand the modern family, such a film as *Our Changing Family Life* can serve a useful purpose. Getting the substance and degree of change into sharper focus than words alone, this film can help us moderns understand what the family was and what the family of today really is. For this reason I recommend it to church boards, to adult clubs in and out of churches, and to college classes, and to community agencies. (B&W; 30 minutes; from McGraw Hill Text Films, 330 West 42nd St., N. Y. 36.)

## About Camping and Summer

If you want to "present a more comprehensive view of what creative camping can accomplish in the lives of boys and girls and their counselors" and if you want to encourage the leaders of children to become camp counselors, then take a close look at the 41-frame B&W filmstrip, *Creative Camping*. (From Broadcasting & Film Commission, 220 Fifth Ave., N. Y. 1; complete with printed script \$2.50.)

If you want to see how one church gradually developed a more adequate summer-time program for its children and youth, then the 77-frame color filmstrip, *Summertime Activities*, can help you. Here are practical ideas on how to get a lot of things going. (From your A-V dealer; or Bureau of Audio-Visual Aids, 1505 Race St., Philadelphia 2, Pa.; complete with reading script \$5.00.)

## Outer Space

When a boy and girl visit Uncle Bob to get him to settle an argument about the moon shining, they learn not only about the moon and the sun and the earth, but about solar systems and a universe too vast for the human mind; and, we see some mighty fine photographs of the "heavens" via Mt. Wilson's big telescope. The nice part about *Wonder's Above* is that God is not ignored. (Color; 13 minutes; rental \$6.00; from Film Dept., Moody Bible Institute, 820 N. LaSalle St., Chicago 10.)

## Background Information

In the average church, how many people have ever been to the Philippines? In the typical church, how many members have ever seen motion pictures on Philippine geography, economics, people, history, education, and government? Very few, indeed. That's why such a film as *The Philippines: Gateway To The Far East* is so useful in church and community. It gives the very information which boys and girls, youth and adults, need if they are to understand the program and possibilities of Christian missions in these islands. Recommended to give information. (From Coronet; address given above.)

## Forest Ranger Films

The Randolph family is a Ranger family. One day ten-year-old Tommy learns a lesson in obedience. This story is told in the 18-minute color film, *Tommy Finds A Pet*—found him, that is, out in the woods where he was forbidden to go when the men were cutting timber. This is one of a series of three character-building films for use in churches, schools, clubs, summer camps, and vacation schools. The other titles are *Tommy's New Friend* (respect for elders) and *A Letter From Alaska* (how God provides for his creatures). All three have good technical qualities. (From World Wide Pictures, Box 1055, Sherman Oaks, Calif.; rental \$9.00.)

## One Great Hour

While it will be too late to do the reader much good in relation to this year's One-Great-Hour offering, *Wait A Minute*, is a filmstrip which can be used at any time of the year to help boys and girls (Primary and Junior) be better stewards of their money. Produced by the Broadcasting and Film Commission for Church World Service, this 74-frame, color, and LP recorded filmstrip will make a useful addition to your A-V library. In it cartooning and photography are effectively combined to get an interesting and informative format which children will enjoy. It asks children to stop and think before they spend their money—for what they may want to get along without after they see the need of children overseas for food, medicine, shelter, clothes and care. Marjorie Thompson's art is lively and pleasing, and Helen Kramer's script quite satisfactory. Highly recommended. (Buy from your A-V dealer or the BFC, 220 Fifth Ave., N. Y. 1.)

222 Ookridge Blvd., Daytona Beach, Fla.

**Simpson Focal Length Modifier.** By simply attaching this auxiliary lens to the front of present 16mm projector lenses, the focal length of the lens can be changed. In one position the modifier reduces the focal length of a 2" lens to 1 5/8"; reversed, the modifier extends the focal length to 2 1/2". This makes possible three different screen sizes at the same distance from projector—decreases positioning of projector.

For more information circle 116 on coupon  
**Triangle Professional Two-in-One 16mm Sound Motion Picture Projector.** A "suitcase" projector for both rear projection and conventional use. By swinging the mirror out of the light beam and replacing the lens with a conventional 2-inch focal length lens standard projection is achieved. Rear projection is accomplished on a built-in 18" x 13" screen of unbreakable translucent plastic. 8" speaker places sound behind screen. Incorporates Bell & Howell Filmosound 385 and 15-watt amplifier. 1000-watt illumination. Accessory 18" x 24" screen for rear projection available.

**GRUBER MAKES SALES CHANGE**

The "Wheelit" mobile projector table is now being sold by its manufacturer, Gruber Products Co., 2223 Albion Street, Toledo, Ohio. Previous arrangement with the Wheelit Sales Company has been discontinued. The Gruber firm is now retaining its own sales organization, contacting audio-visual dealers direct, for the distribution of its extensive and varied line of folding and non-folding projector and office machine carriers.

**FAMILY FILMS TO RELEASE  
40 NEW FILMSTRIPS**

Family Filmstrips, Inc., a division of Family Films, producer of religious motion pictures, makes its entry into the church filmstrip field with an initial offering of 40 titles, all in color with sound on long-play records, for mid-summer release. Nine units of related subject matter are arranged four to a "kit" and four special Christmas subjects complete the offering.

Levels represented are as follows: kindergarten, pre-teens, young teens, older teens and Christian home and family life, as well as the Christmas offerings.

Family Filmstrips will be sold through regular Family Films dealers, including denominational and other film libraries, in all parts of the country. Further particulars may be obtained by writing Filmstrips, Inc., 5823 Santa Monica Blvd., Hollywood 38, California.

**"NOW IT CAN BE TOLD"—in 16mm**

One of the most highly rated of television programs, John Nesbitt's "Now It Can Be Told," has just been released for 16mm use by schools, churches, libraries and similar non-theatrical audiences. Such stars as Bette Davis, Thomas Mitchell, Greer Garson, Thelma Ritter, Hugo Haas and many more play the leads in stories that fit well into history, literature, science, music, health and other subject areas. Added to the contribution each makes to its own subject area is the good example given of highly interesting, culturally worthwhile TV fare. All are B&W, 3-reelers, and are sold outright at \$135. Exclusive distributor is Carousel Films, Inc., David B. Dash, 1501 Broadway, New York 36.
